ICEBERG

CONCEPT

I. DIRECTIVE

The Joint Chiefs of Staff have directed the Commander in Chief Pacific Ocean Areas to occupy one or more positions in the NANSEI SHOTO, target date 1 March 1945.

II. ASSUMPTIONS

That the seizure of IWO JIMA is completed at a sufficiently early date to permit availability of fire support units and close air support units for the assault in the NANSEI SHOTO.

That results of our operations against the EMPIRE, FORMOSA, the RYUKYUS, and the enemy Fleet during the period preceding the target date for the MANSEI SHOTO assault indicates that we will be able to maintain continuing control of the air in the objective area.

That assault shipping and supporting naval forces are released promptly from LUZON operations.

III. PURPOSES

To establish bases from which to:

- (1) Attack the main islands of JAPAN and their sea approaches with naval and air forces.
- (2) Support further operations in the regions bordering on the EAST CHINA SEA.
- (3) Sever Japanese sea and air communications between the EMPIRE and the mainland of ASIA, FORMOSA, MALAYA, and the NET HERLANDS EAST INDIES.

Pac-12-jh

To establish secure sea and air communications through the EAST CHINA SEA to the coast of CHINA and the YANGTZE VALLEY.

To maintain unremitting military pressure against JAPAN.

IV. TASKS

Immediate:

Capture, occupy, defend, and develop OKINAWA Island and establish control of the sea and air in the NANSEI SHOTO area.

Eventual:

Extend control of the NANSEI SHOTO by capturing, occupying, defending and developing additional positions.

V. CONCEPT OF OPERATIONS

Carrier attacks on JAPAN and the air threat from the MARIANAS together with our seizure of IWO JIMA are expected to force a concentration of Japanese air strength in the heart of the EMPIRE. Our Expeditionary Forces will be subject to strong attacks by Japanese aviation staged through KYUSHU or the CHINA Coast and FORMOSA.

By making powerful air attacks on the EMPIRE and FORMOSA prior to the OKINAVA assault we can inflict heavy losses upon Japanese air forces and reduce the potential threat to our expeditionary forces.

The capture and occupation of the OKINAWA Islands require that our forces establish undisputed control of the

Pac-12-wmh

THE RESIDENCE OF THE PARTY OF T

sea and air in the area of operations. Accordingly, the movement into the RYUKYUS will be preceded by air operations as follows:

- (1) Preliminary reconnaissance of the objectives by air forces based on the Asiatic mainland and by those based in the MARIANAS.
- (2) Destructive attacks on the main Japanese islands by carrier aircraft and by very long range bombers operating from CHINA and the MARIANAS.
- (3) Destructive attacks on the Japanese air forces and bases in FORMOSA, AMOY, and the PESCADORES by carrier task forces and by air forces based in LUZON.

Prior to amphibious operations against OKINAWA, strong carrier attacks will be made as necessary against critical objectives in FORMOSA, the main Japanese islands, and in the RYUKYUS in order to destroy enemy forces and installations.

In advance of the operations, the sea communications of the RYUKYUS will be destroyed to the maximum extent practicable by the action of submarines and by surface and air attacks on shipping.

The approach of the attack force will be covered by further intensified attacks on enemy air bases in FORMOSA, KYUSHU and on islands of the NATICEI SHOTO.

The scheme of maneuver will be designed to gain early use of sufficient airdrome capacity in OKINAVA, together

Pac-i2-with

with unloading facilities adequate to support its development, to maintain positive control of the air in the area.

Air bases will be activated rapidly to support the air garrison listed under Forces Required. The air force to be based ashore will total approximately 650 airplanes.

The port of NAH, will be developed to its maximum capacity to accommodate support shipping and to support forces for subsequent operations. NAKAGUSUKU BAY will be developed as an advanced fleet base with port facilities to provide logistic support for major fleet units and occupation forces.

Following is the general sequence of operations in NANSEI SHOTO:

Phase I Capture the southern portion of OKINAWA including small adjacent islands and develop base facilities.

Phase II Seize the remainder of OKINAWA and IE SHIMA and develop additional necessary base facilities in favorable localities.

Phase III Exploit our position in the NANSEI SHOTO seizing and developing additional positions with forces locally available.

ICEBERG

APPENDIX A

GROUND FORCES

1. ENEMY STRENGTH AND CAPABILITIES.

The estimated strength of the Japanese Forces in the OKINAWA Group, as of 15 October 1944 is 48,600, including:

1 Army headquarters	750
2 First line infantry divisions	35,000
l Fortress group (Possibly an independent mixed brigade)	4,500
Naval personnel	2,100
Air Base personnel	1,500
Shipping engineer personnel	2,500
1 Tank regiment (30 L, 47 M tanks)	750
Construction personnel	1,500
Total	48,600

An additional first line division (less 1 regt) is estimated to be on MIYAKO JIMA, 150 miles SW of OKINAWA JIMA; the excepted regiment is estimated to be in the DAITO Group, 170 miles east of OKINAWA JIMA. A fourth division is estimated to be in the AMAMI O SHIMA Group, 90 miles northeast of OKINAWA JIMA. Reinforcement of the NANSEI SHOTO was initiated in July 1944, at which time the two divisions arrived at OKINAWA JIMA. By target date these divisions will have had over seven months in which to organize for defense. As a result of the capture of LUZON and IWO JIMA, the Japanese will probably exert maximum effort to complete full defensive preparations in the NANSEI SHOTO.

The civil population of 443,000, three-quarters of whom live in the southern half of OKINAWA JIMA, offers a potential source for homeguard, milita, and guerilla forces who in them-

selves constitute a serious threat of opposition.

From previous experience it is known that the Japanese will resist fanatically any invasion of the NANSEI SHOTO, and will counterattack and reinforce within the limits imposed by our superior air and naval forces.

Information as to enemy defensive installations on OKINAWA JIMA is meager, but there are indications that the southern half of the island (south of a general line from SERAKAKI to CHIMU) will contain the bulk of garrison forces, and have strongly organized defenses at the beaches and in depth. The northern half of the island is mountainous with a high central ridge bordered by tarraces. Therefore, it is assumed that, with the exception of MOTOBU Peninsula, the Japanese will defend this area lightly. IE SHIMA is fortified, and is the location of an excellent airfield. The NAHA Harbor area is reported to be defended by coast defense guns installed on the high ground south of NAHA. These guns are capable of opposing amphibious assault within their range on the east as well as on the west coast. The areas guarding the approaches to NAKAGUSUKU WAN and CHIMU WAN, including the small satellite islands off the east coast. are reported to be heavily fortified. Five airfields are situated in the southern half of OKINAWA JIMA, - two in the JINA-KATENA area, two in the NAHA area, and one on the east coast midway between KATTNA and NAHA. These fields are expected to be strongly defended.

Information on landing beaches is sketchy although locations of fifteen are known on the southern half of OKINAWA JIMA; of these, ten are on the west coast, one on the southeast, and four

TOTAL STORY

on the east. Further reconnaissance will probably reveal other suitable beaches. There is at least one landing beach on each satellite island off the east coast. Fringing reefs are found off all beaches.

According to available information, the most favorable coastline for landing and for advance inland is west of KATENA, north and south of the river mouth.

2. ASSAULT FORCES REQUIRED

The strength of the forces required for the seizure and occupation of OKTNAWA JIMA is estimated to be an army of two corps of three reinforced divisions each in the assault, with two Army divisions in a reserve.

Units of the XXIV Corps will be mounted in LEYTE and NEW CALEDONIA. Rehearsals will take place in the mounting areas.

Units of the III Amphibious Corps, less one division, will be mounted in the GUADALCANAL - RUSSELLS area and rehearsed in the GUADALCANAL area. The 2nd Marine Division will be mounted in the MARIANAS and will be the third division of this Corps.

Two Army divisions, the 27th at ESPIRITU SANTO, and an additional division to be designated, will constitute the area reserve.

3. DEFENSE FORCES REQUIRED

OKINAWA JIMA lies within bomber range of TORMOSA, the CHINA COAST and JAPAN proper and within fighter range of other islands of the NANSEI SHOTO Group. It can be expected that enemy reaction to the occupation of this island and any other islands in the NANSEI SHOTO will be strong in air and surface vessel counterattack with a possible attempt on the part of the Japanese to retake OKINAWA JIMA. It is estimated that two infantry

TO DESTRUCTION

divisions taken from the assault force will be required for garrison.

The principle bases requiring antiaircraft protection will be NAHA, BATEN KO, YONABARU, KUBA SAKI, ONO MISAKI, KOGUSUKU, OSUNOHANA, CHIMU, and TSUKEN JIMA. It is contemplated that eight airfields will be activated in the southern half of OKINAWA JIMA and a seaplane base on TSUKEN JIMA. In order to provide the necessary anti-aircraft artillery protection for installations on OKINAWA JIMA five Army AAA gun battalions, five Army AAA automatic weapons battalions, two Army AAA searchlight battalions and four Marine anti-aircraft battalions will be required.

Coast defenses are required for the protection of the Port of NAHA, the naval base of NAKAGUSUKU WAN and the seaplane base of TSUKEN JIMA. Three Army 155-mm gun battalions of seacoast artillery (SM) will be required.

4. SCHEME OF MANEUVER

The scheme of maneuver for operations against the NANSEI SHOTO will comprise three phases, as follows:

PHASE I. See Annez 1

The southern half of OKINAWA JIMA (that part south of a general line from SERAKAKI to CHIMU), including the satellite islands off the east coast, has been selected as the objective area for this phase. The scheme of maneuver is designed to isolate the objective area by seizing ISHIKAWI Isthmus in order to prevent enemy reinforcement from the north. Simultaneously the assault forces will seize and occupy a general east-west line from KUBA SAKI in order to prevent enemy reinforcement from the south. After capture and occupation of the northern half of the objective area, the attack is continued to capture

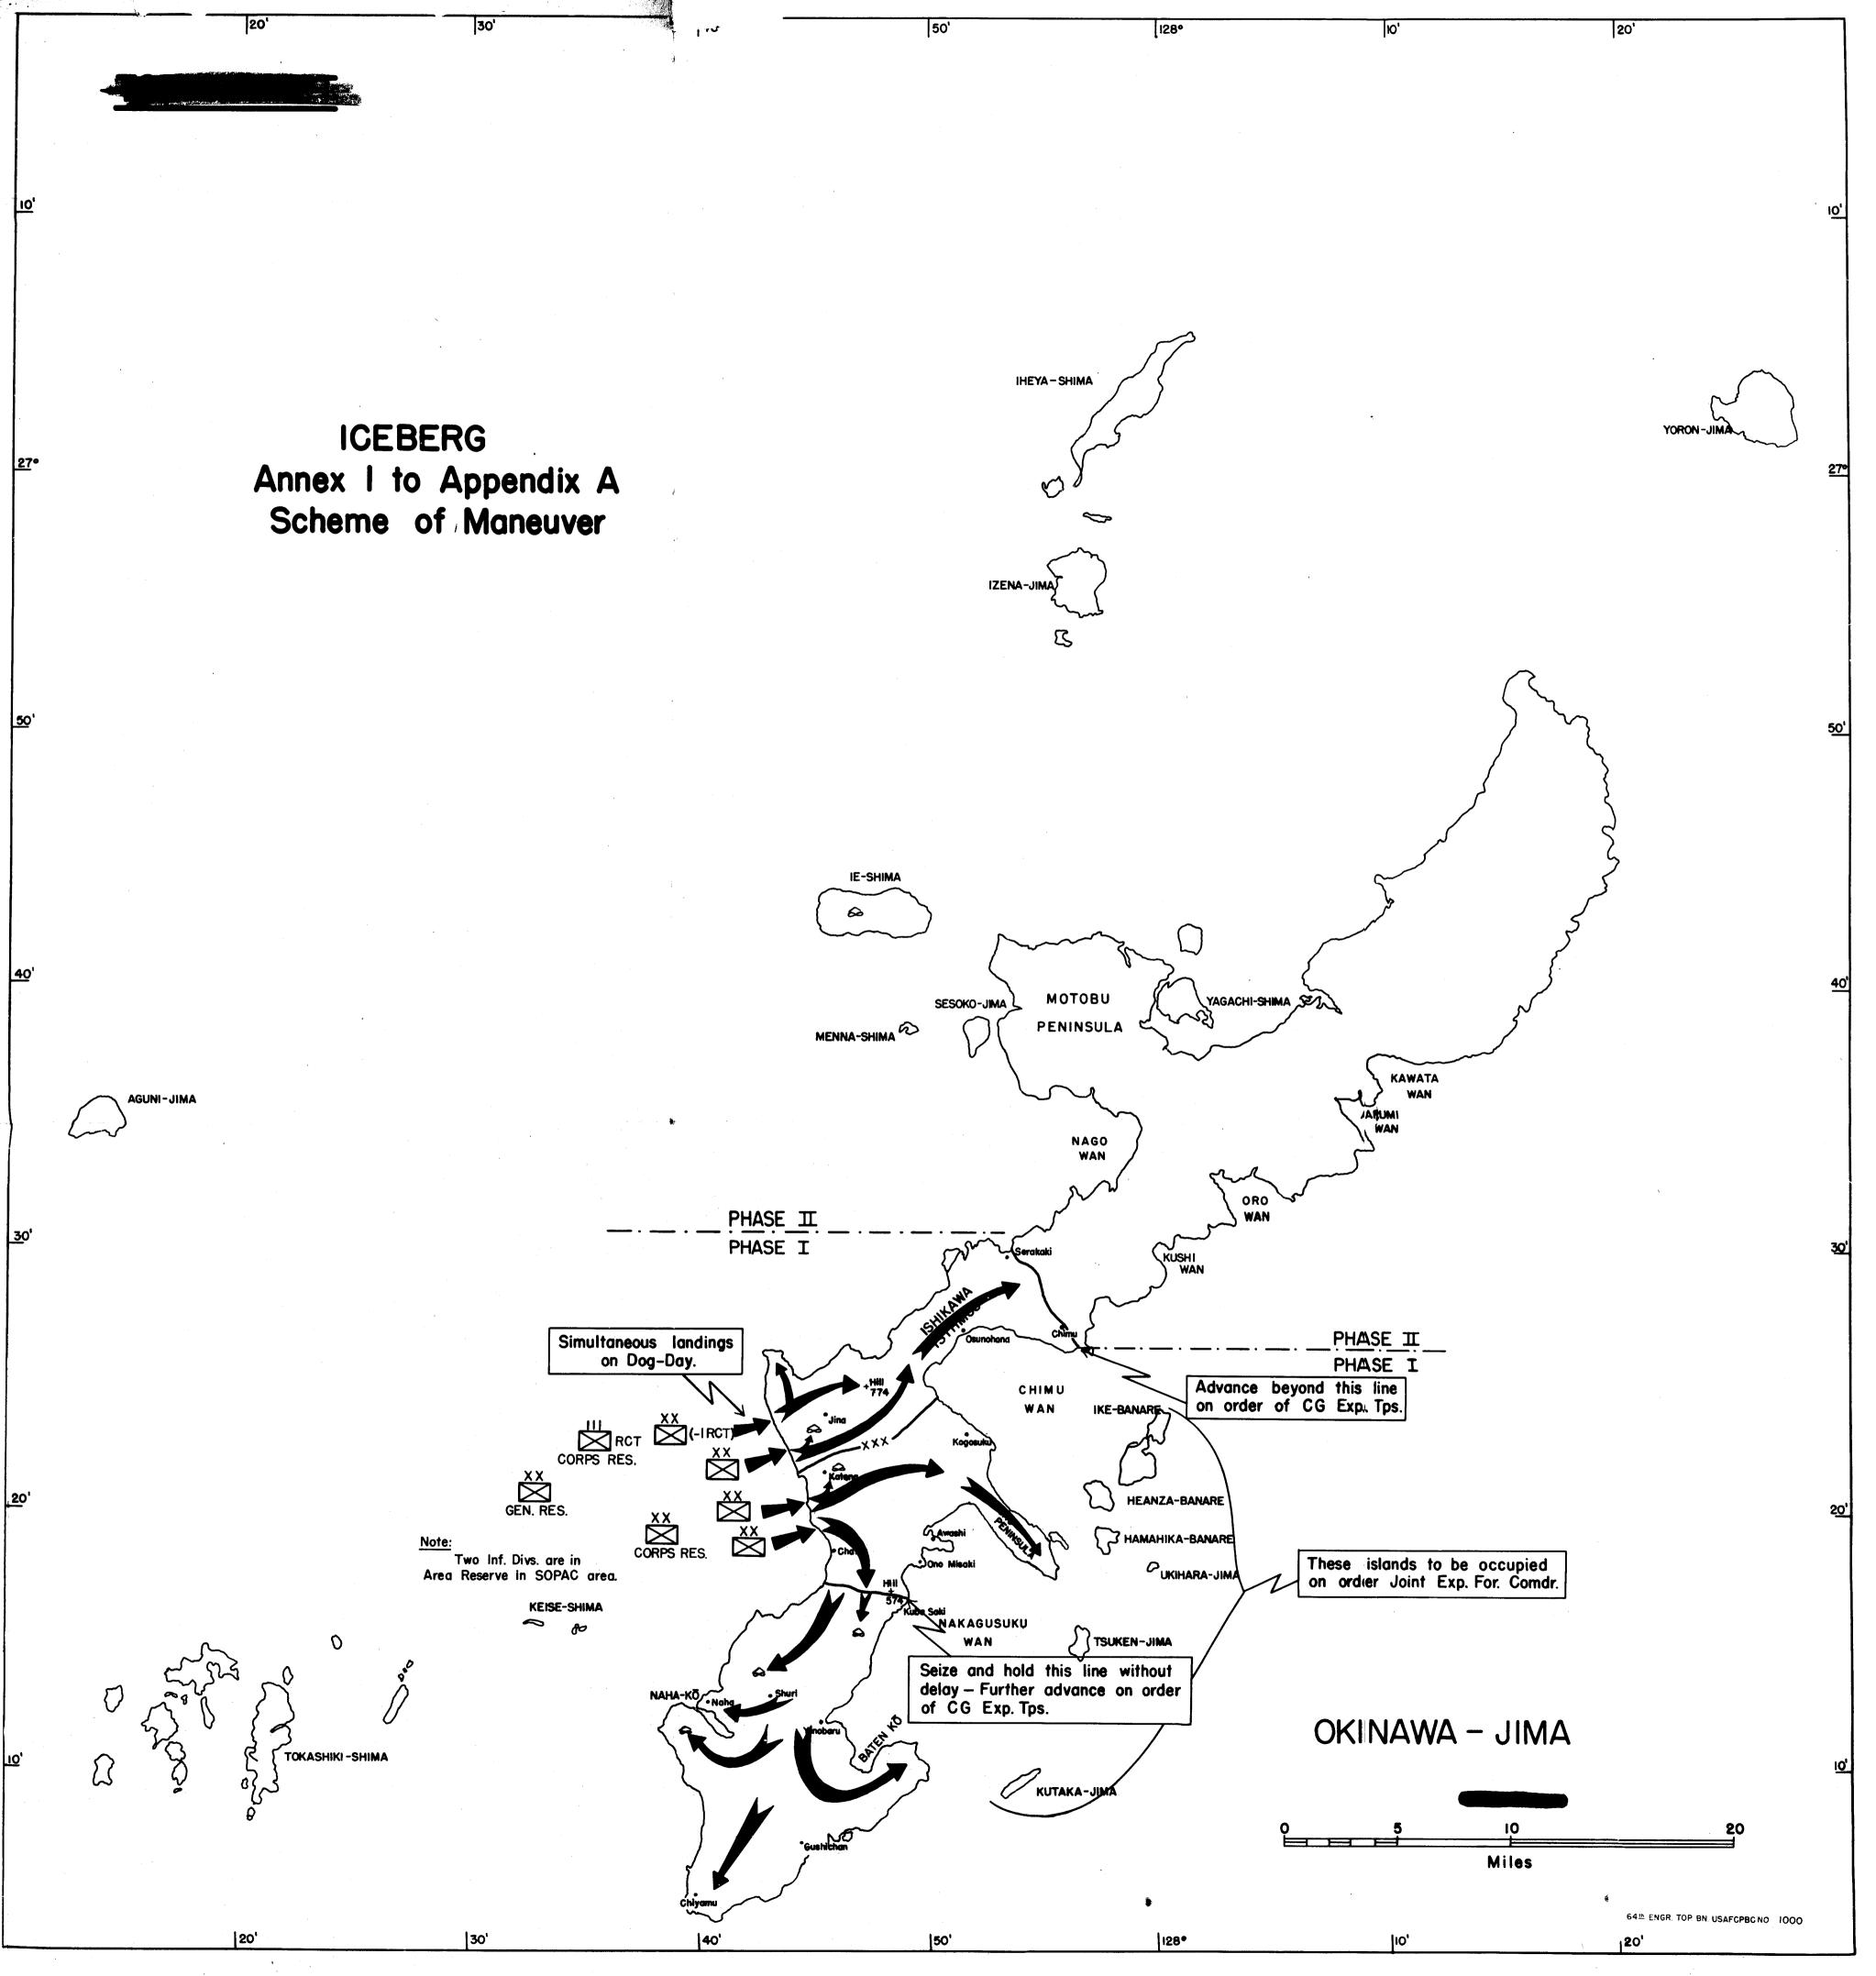

and occupy the remainder of the objective area.

PHASE II. See Annex 1.

This phase comprises the capture and occupation of the remainder of OKINAWA JIMA and of IE SHIMA. It will be initiated upon completion of PHASE I on W-Day to be announced by the Commanding General Expeditionary Troops. The seizure of these objectives will be accomplished by a shore-to-shore amphibious assault on IE SHIMA, and a combined shore-to-shore amphibious and land assault against the north half of OKINAWA JIMA. Forces locally available will execute the operation. The scheme of maneuver should embrace the early capture of hotobu Peninsula, followed by the capture of IE SHIMA, followed by capture of the remainder of OKINAWA JIMA.

PHASE III

This phase will comprise the seizure and occupation of other positions in the NANSEI SHOTO as directed by CinCPOA.

PF AMEN

ICEBERG

APPENDIX B

AIR FORCES

1. CONCEPT OF OPERATIONS.

Preliminary air bombarament of FORMOSA and OKINAWA will be conducted by the Far Eastern Air Force and 20th Air Force from bases in LUZON, CHINA, and the MARIANAS to the extent that execution of their primary mission permits.

Air of arations in direct preparation for the assault will consist of a series of carrier based attacks on FORMOSA, the NANSEI SHOTO, and the KYUSHU - WESTERN HONSHU area, in that order, to destroy enemy air effectiveness at the objective and supporting bases. This succession of attacks will culminate in a sustained attack on KYUSHU just prior to the assault on OKINAWA.

Air opposition having been eliminated by carrier strikes, replenishment of enemy air bases will be prevented by shore based attacks on FORMOSA and the southern RYUKYUS by aircraft based in LUZON and CHINA, and by continued action of fast carrier groups on KYUSHU and the northern islands of NANSEI SHOTO.

Escort carriers will maintain control of the air at OKINAWA and provide direct air support for the assault.

Very heavy bombers from the MARIANAS will provide general support by continuing operations against targets in the EMPIRE and by heavy attacks on OKINAWA.

Tasks

The tasks to be performe by the air forces are:

- (1) Search and reconnaissance.
- (2) Destruction of aircraft, aircraft installations and fixed defenses.

Pac-12-eiw AND THE STATE OF T Covering strikes on the EMPIRE: (3)(4)Neutralization of enemy bases from which operations in the objective area may be threatened. Destruction of enemy naval forces and shipping. (5) (6) Close protection of our surface forces. Direct air support of landings and operations ashore, (7) (8) Air defeate of the captured base until garrison air fields are activated.

(9) Continued neutralization of by-passed enemy bases.

(10) Photographic reconnaissance of objective areas.

2. OPERATIONS.

a. Carrier Forces.

Fast Carriers (See Annex 1 to Appendix B)

The Fast Carrier Task Force will sortie from ULITHI on D-15 and will conduct sustained strikes on the FORMOSA - MIYAKO areas on D-11 and D-10. After fueling and receiving replacements, strikes will be conducted against the OKINAWA - AMAMI O SHIMA areas on D-7, D-6 and D-5. Then after again fueling and receiving replacements strikes will be conducted against the KYUSHU - WESTERN HONSHU areas on D-3, D-2, D-1 and D Days retiring as necessary for fueling.

Thereafter the Task Groups will rotate in maintaining a covering position and in conducting supporting strikes as
necessary for continuing operations.

During the strikes against OKINAWA on D-7, D-6 and D-5, bombardment by the fast battleships will be conducted.

Escort Carriers

The escort carriers will escort and provide air

PAPY

pation and development of the objective as required. Sufficient escort carriers will remain at the objective to provide air defense until garrison airfields are activated.

Transport Carriers

Transport carriers will transport to the area of operations, replacement aircraft, parts, pilots and aircrews for the CVs and CVLs and CVEs. Transport carriers will also transport designated garrison aircraft to the objective.

b. Shore Based Air Forces.

Naval Search Squadrons, POA

Maintain search of ocean areas north and west of the MARIANAS. If development of airfields on IWO JIMA will permit, extend this reconnaissance as far as practicable toward the NANSEI SHOTO and HONSHU when the Fast Carrier Task Force departs from ULITHI on D-15.

Interdict enemy search by offensive patrols from the MARIANAS and IWO JIMA ahead of the Fast Carrier Task Force.

Strategic Air Force, POA

Neutralize enemy bases in the CAROLINES and BONINS. Strike targets of opportunity.

Strike the AMAMI GUNTO and JAPAN as practicable.

Provide fighter escort for VLR attacks on the EMPIRE. China Based Air Forces.

The 14th Air Force and 20th Bomber Command operations will be coordinated by the Commanding General, CHINA-BURMA-INDIA in conformity with Alternate PAC-AID. Specific operations desired by POA are:

Conduct repeated photographic reconnaissance of OKINAWA.

Beginning D-30 sorties allocated to the support

THE RESIDENCE OF THE PARTY.

of POA will be directed against air installations on Northern FORMOSA.

20th Air Force (MARIANAS)

From D-30 to D-8 and D-5 to D Day all scrties which are allocated to the support of ICEBERG will be directed against OKINAWA airfield installations and fixed defenses.

Any sorties which may be scheduled for D-7 and D-6, when the fast carriers are attacking OKINAWA, should be directed against airfields in Southern KYUSHU.

Far Eastern Air Force.

Initiate attacks on enemy air bases in FORMOSA as soon as the situation in LUZON permits.

Maintain neutralization of airfields on FORMOSA and the SAKISHIMA JUNTO following the carrier attacks on these areas.

Maintain search of the SOUTH CHINA SEA, STRAIT OF FORMOSA and the sea areas east of TORMOSA.

3. COORDINATION.

In accordance with the provisions of Alternate PAC-AID, the Commanding General 14th Air Force will coordinate the operations of the 14th Air Force and of the 20th Bomber Command.

The Commanding General, Strategic Air Force, POA, will coordinate the operations of his command with the 20th Air Force in the MARIANAS.

CinCPOA will coordinate the operations of carrier aviation and all shore based air forces assigned to the Pacific Ocean Areas. He will also coordinate the activities of all air forces under his command with those assigned to other areas.

4. AIR BASE DEVELOFMENT.

Air bases will be developed to accommodate the following air force:

4	groups Marine fighters	288	VMF
2	squadrons Marine night fighters	24	VMF(N)
2	squadrons Marine torpedo bombers	3 6	VMTB
2	squadrons Navy heavy patrol bombers	24	PB(HL)
1	squadron Navy photographic	6	ΔD
1	squadron Photo reconnaissance (P-38)	12	F-5
2	groups Army medium bombers	128	B-25
2	groups Army heavy bombers	96	B-24
2.	squadrons Medium seaplanes	24	PB(MS)

Eight airfields, four fighter and four bomber, and one seaplane base will adequately support this force.

Operationally, it is desirable that these units be installed as follows:

2	groups VMF	D / 5
2	squadrons VMF(N)	D / 5

Additional:

2 groups VMF	D / 20 or earlier
2 squadrons VMTB	D / 20 or earlier
1 group VBM	D \(\frac{1}{2} \) 30
l group VBM	D / 40
2 squadrons PB(HL)	D / 50
2 groups VBH	D / 50
2 squadrons Photo	D / 50
2 squadrons PB(MS)(tender based commencing D/2)	D / 60
2 CV groups 00 replacement aircraft	When construction troops available from

other airfields.

TOPANE

Subject to adjustments imposed by engineering problems, these units could well be segregated as follows:

4 fighter fields, Marine, each to accommodate

1 VMF group. On each of two of these fields there
will be additionally 1 VMF(N) squadron. Provision
will also be made for 1 Marine wing headquarters.

One of the VMF groups, and one VMF(N) squadron will
be located in the southern portion of the island.

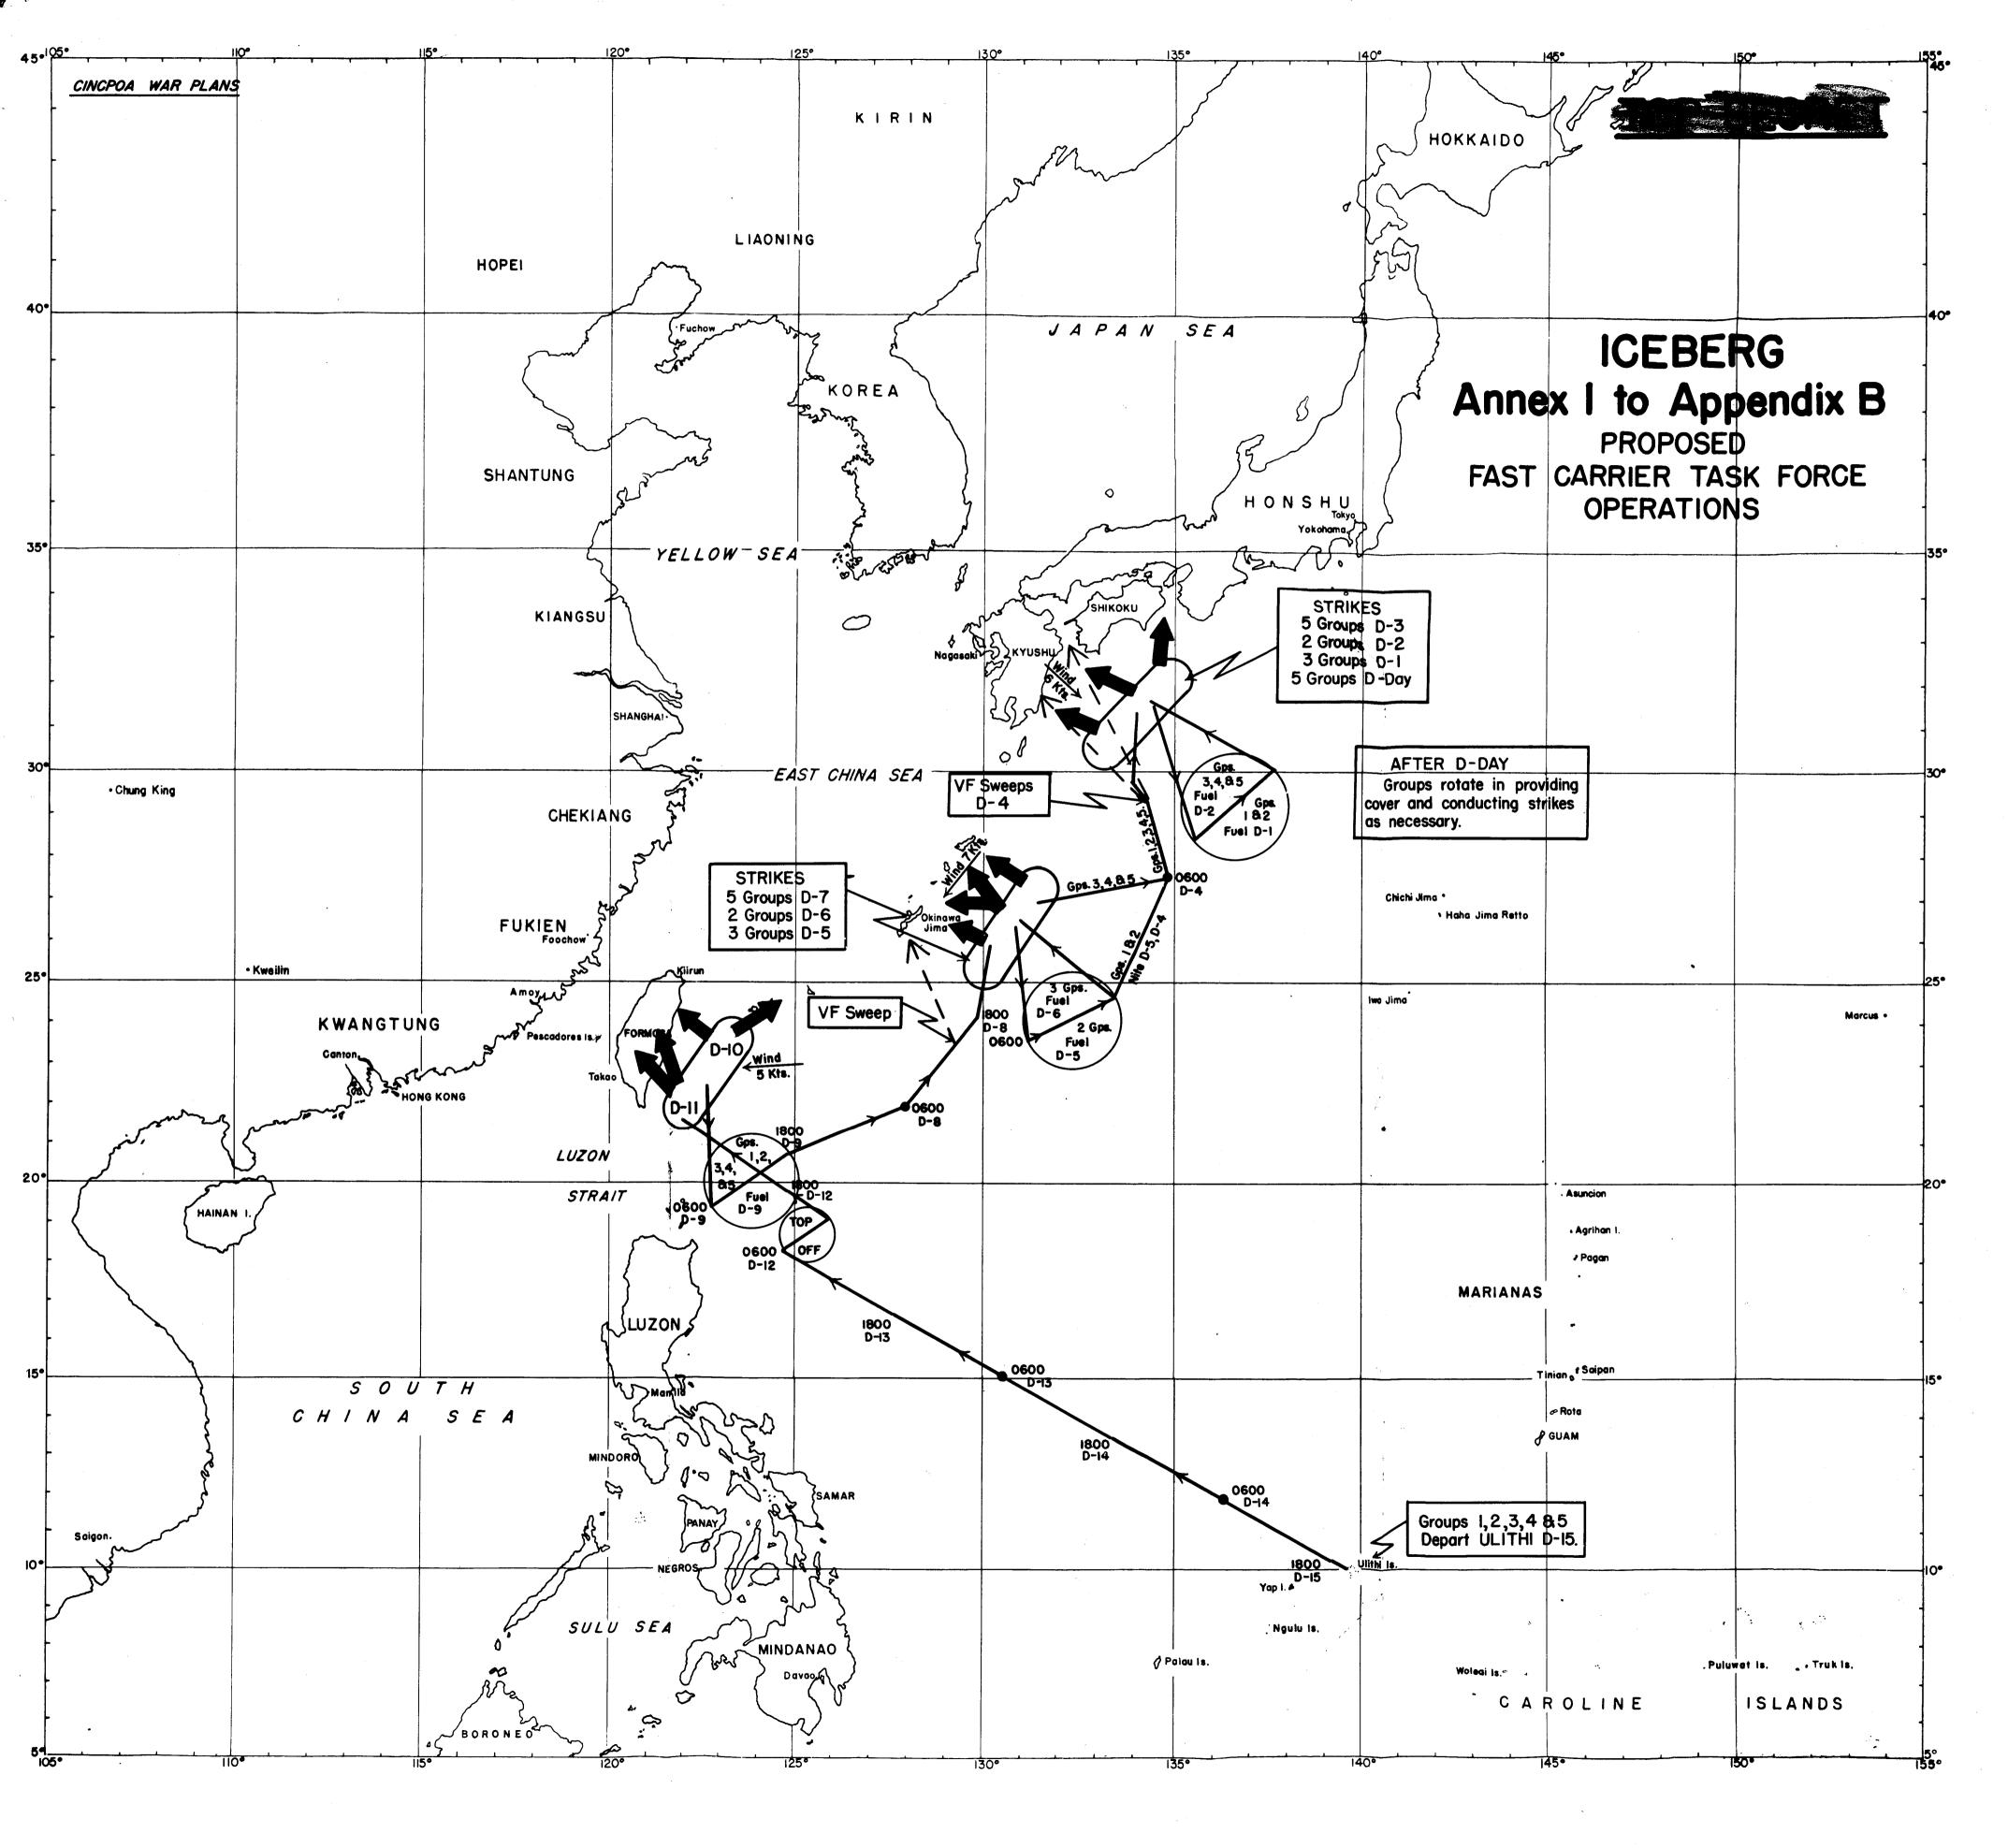

The remainder of the fighters may be in one general
area to the north.

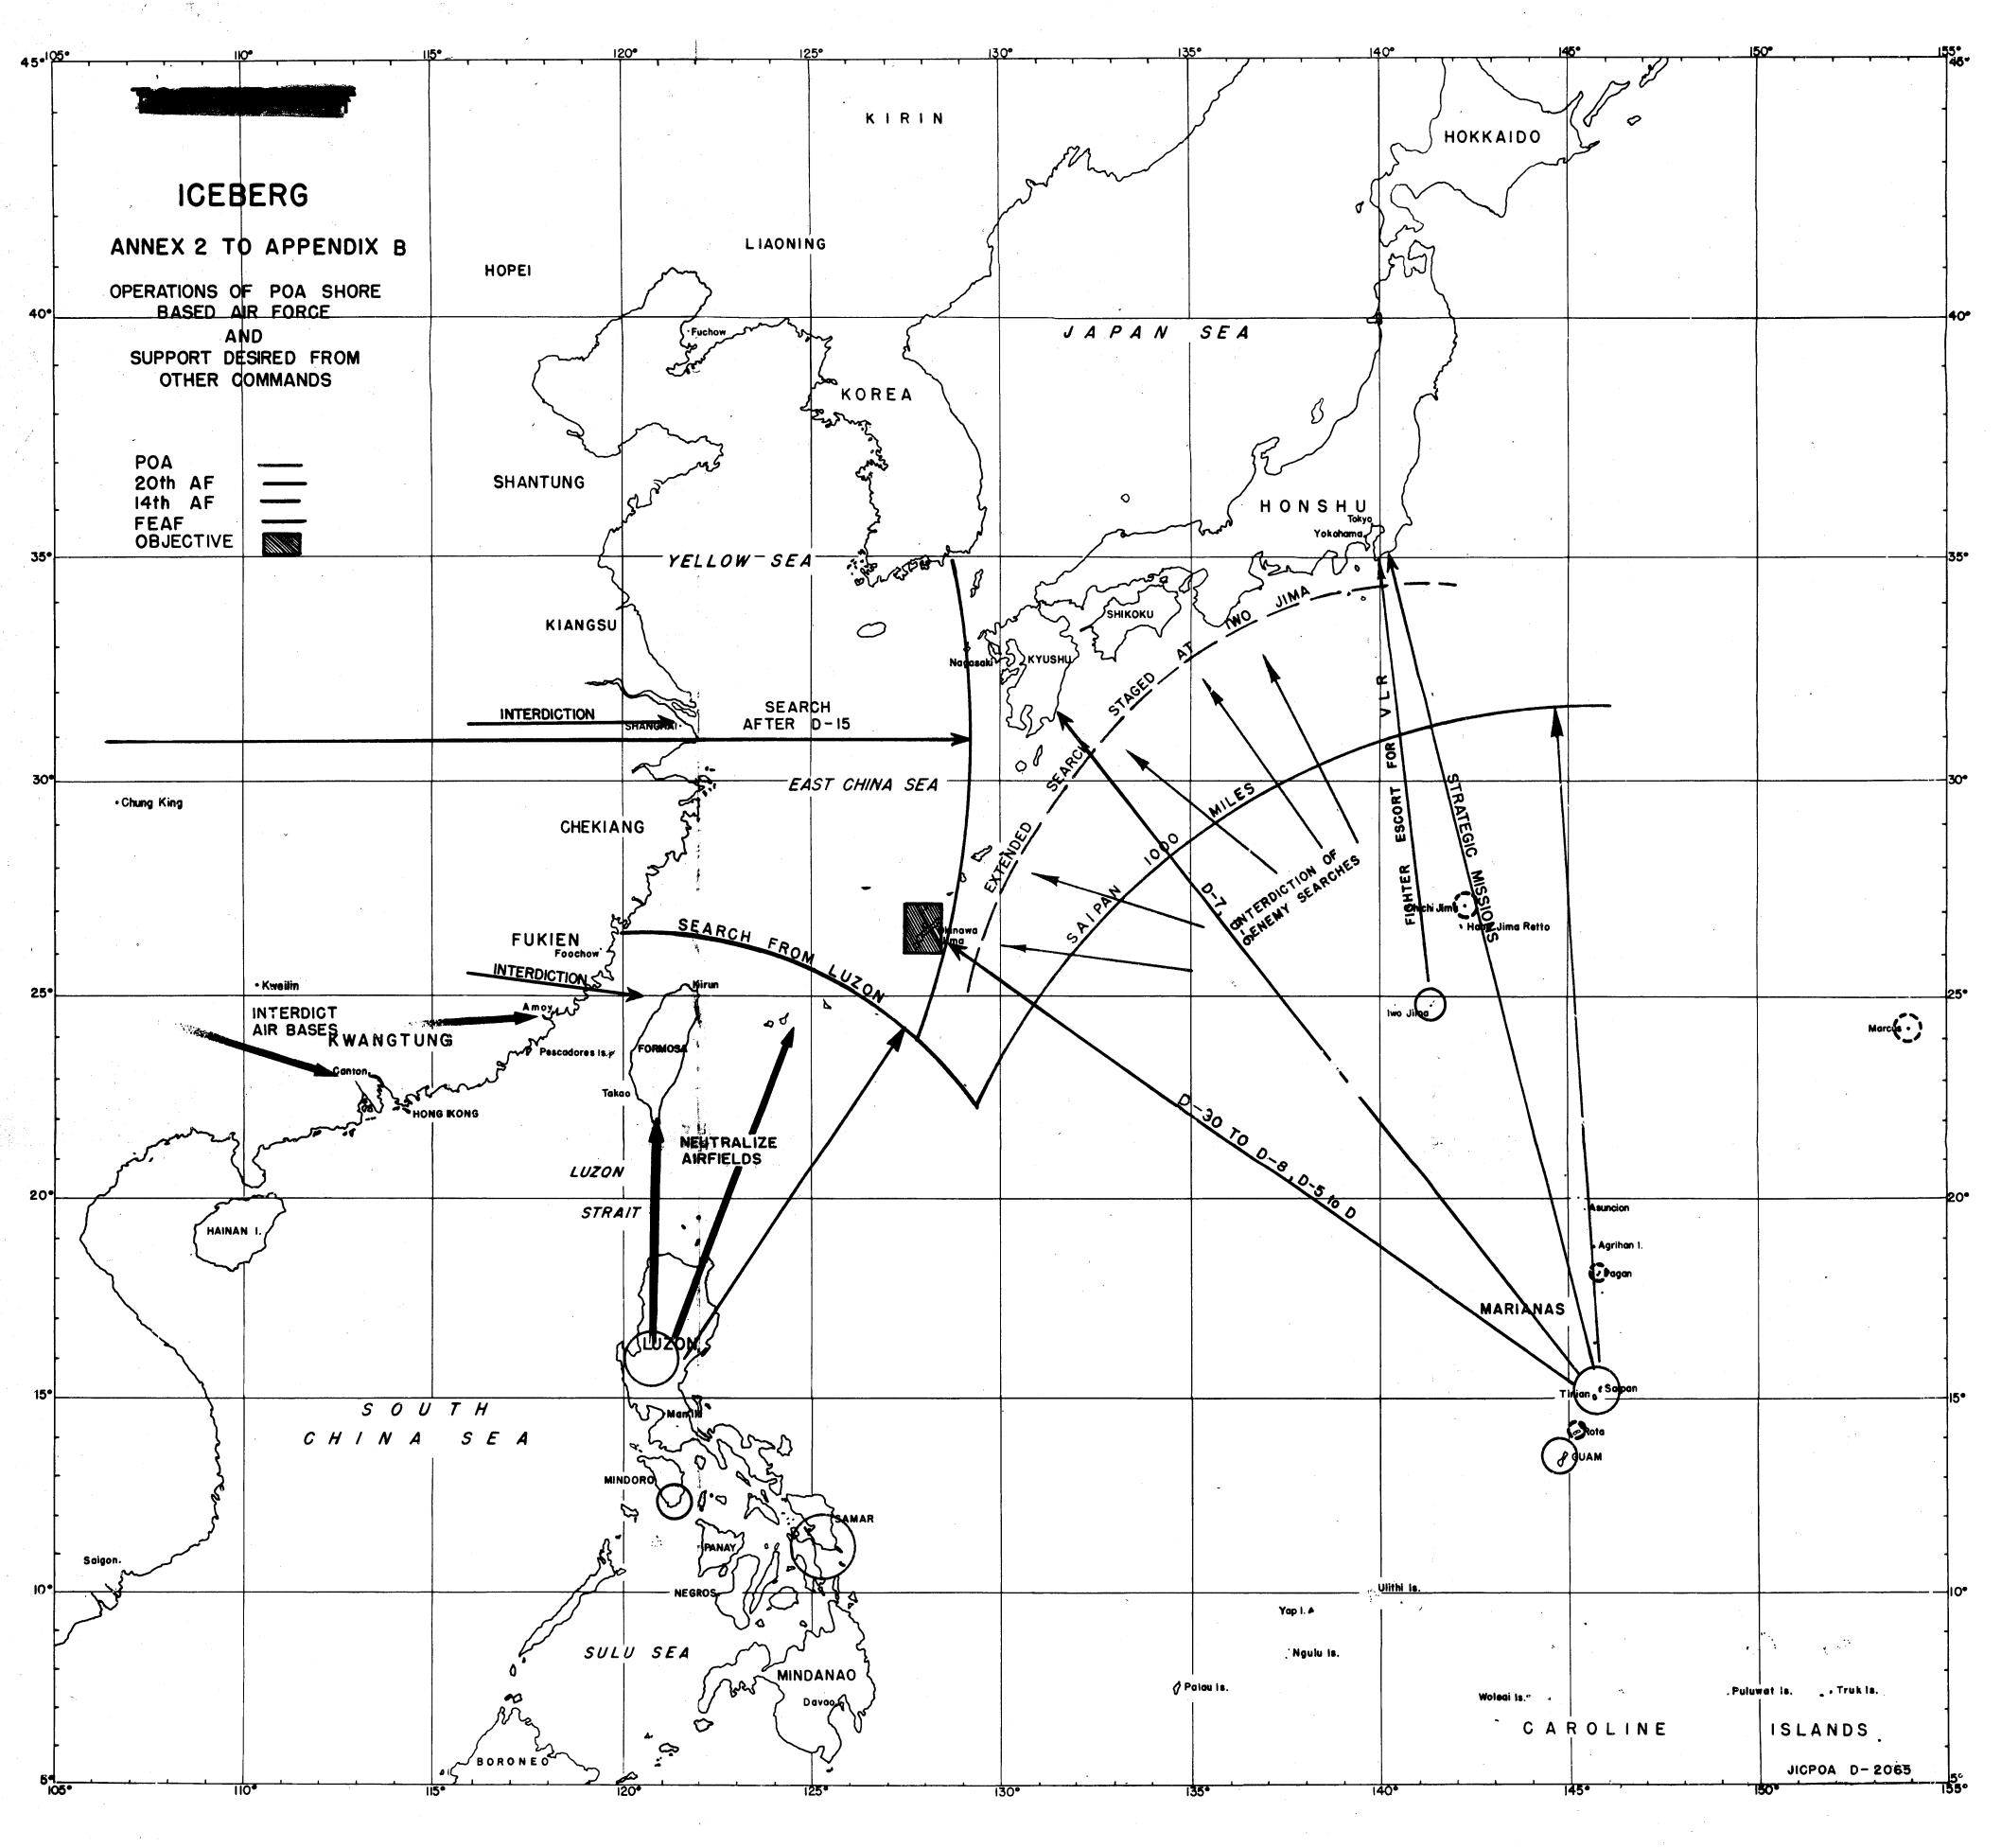

3 Army fields, one for two groups of heavy bombers, the other two each to support one medium bomber group. One photographic reconnaissance squadron will be located on one of these fields.

1 Navy field for 2 VMTB squadrons, 2 PB(HL) squadrons, 1 photographic squadron, plus troop carrier terminal and transient facilities. 1 utility towing squadron and 1 drone squadron when NAKAGUSUKU WAN becomes available as a secure fleet anchorage.

One seaplane base for the operation of 1 squadron of PB(MS) and 1 Rescron and NATS seaplanes.

If terrain studies make a different grouping of units desirable, or permit the use of fewer fields by interlocking dispersal areas, the segregation indicated may be varied.

ICEBERG

APPENDIX C

NAVAL FORCES

1. ASSAULT SHIPPING

In order to deploy assault shipping to mount 6 divisions for the assault with 2 additional divisions in reserve, it is planned that ships be provided in the manner indicated in the following table:

	APA(AP-APH-LSV)	AKA(AK)	LST	LSD	LSM	AGC
Assigned 7th Fleet for LINGAY	TEN 70	19	120	10	30	4
Est. overhaul required after LINGAYEN	10	1	40	2	5	0
To be made available for DETACHMENT from forces employed at LINGAYEN	15	6	0	3	0	0
Remainder available for ICEBERG from LINGAYEN	45	12	80	5	25	4
To be redeployed from DETACHMENT to ICEBERG	15	6	0	3	0	2
To be employed from New Construction and from overhate to ICEBERG	aul 30	18	70	0	35	-1
Total for ICEBERG on D-Day	90	36	150	8	60	7
Additional for ICEBERG reserve to be deployed from DETACHNE		12	20	0	10	1

It is expected that following the landing at LINGAYEN and after selected ships are returned to the West Coast for overhaul, the remaining 60 troop ships (APA-AP-APH-LSV) will be organized in 4 transport squadrons.

These squadrons should adhere approximately to the following operating schedule:

CONTRACTOR

TransRon	I	Depart LINGAYEN for MARIANAS empty Arrive MARIANAS (1800 miles) Complete interim upkeep Complete loading 3rd MarDiv for DETACHMENT Arrive TWO JIMA (780 miles) Depart TWO JIMA for MARIANAS with 3rd MarDiv Arrive MARIANAS Complete unloading and depart MARIANAS Arrive SoPac available to load one division as reserve for ICEBERG	Dec. Jan. Jan. Jan. Feb. Feb. Mar.	4 14 20 23 13 16 21
TransRon	II	Depart LUGAYEN for NEW GUINEA Tith Casuals Arrive NEW GUINEA (2000 miles) Complete unloading Arrive GUADALCANAL (900 miles) Complete interim upkeep Complete rehearsals 6th MarDiv Complete final loading and depart Arrive OKINAWA (2870 miles)	Jan. Jan. Jan. Jan. Feb. Feb. Mar.	13 17 20 7 13 19
TransRon	III	Depart LINGAYEN Arrive NEW GUINEA (2000 miles) Complete unloading and reloading Arrive LINGAYEN (2nd Trip) Depart LINGAYEN Arrive LEYTE (950 miles) Complete interim upkeep Complete rehearsals 7th Div Complete final loading and depart Arrive OKINAWA (1000 miles)	Dec. Jan. Jan. Jan. Jan. Feb. Feb. Mar.	3 10 17 22 25 12 19 25
TransRon	IV	Depart LINGAYEN Arrive NEW GUINEA (2000 miles) Complete unloading and reloading Arrive LINGAYEN (2nd Trip) Depart LINGAYEN Arrive LITE (950 miles) Complete interim upkeep Complete rehearsals 96th Div. Complete final loading and depart Arrive OKINAWA (1000 miles)	Dec. Jan. Jan. Jan. Jan. Feb. Feb. Mar.	3 10 17 22 25 12 19 25

Pac-12-eiw

In addition to these transport squadrons released from LINGAYEN, two new squadrons which are to be used in DETACHMENT should adhere approximately to the following operating schedule:

TransRon	V	Depart IWO JIMA with Casuals Arrive SAIPAN Complete interim upkeep Complete rehearsals 2nd MarDiv Complete final loading and depart Arrive OKINAWA (1250 miles)	Jan. Jan. Feb. Feb. Feb. Mar.	30 11 18 24
TransRon	VI	Depart IWO JIMA with one combat Div. Arrive MARIANAS Complete unloading and depart Arrive ESPIRITU (2250 miles) Complete interim upkeep Available to load 27th Div as reserve for ICEBERG	Feb. Feb. Feb. Mar.	13 18 26

In addition to these squadrons, two newly formed squadrons from new construction will adhere approximately to the following operating schedule:

TransRon VII	Depart PEARL Arrive GUADALCANAL (3200 miles) Complete voyage repairs Complete rehearsals 1st MarDiv Complete final loading Arrive OKINAWA (2870 miles)	Jan. 22 Feb. 3 Feb. 7 Feb. 13 Feb. 19 Mar. 1	3
TransRon VIII	Depart PEARL Arrive NEW CALEDONIA (3400 miles) Complete voyage repairs Complete rehearsals 77th Div. Complete final loading Arrive OKINAWA (3800 miles)	Jan. 18 Jan. 31 Feb. 3 Feb. 9 Feb. 15 Mar. 1	L

2. FIRE SUPPORT GROUPS

It is desirable that the total fire support force be devided into three groups in order to:

- (a) Provide fire support during rehearsals for troops mounting in LEYTE and in GUADALCANAL.
- (b) Operate in relays at the objective, because the period during which fire support will be required extends over a considerable period of time.

The groups may be organized as follows:

19 <u>V</u> 18	46B4	66 C 25
5 OBB	2 OBB	2 OBB
	.•	1 CB
2 CA	2 CA	1 CA
2 CL	1 CL	
9 DD	4 DD	5 DD

Groups should operate in accordance with the following approximate schedule:

Group A	Depart IWO JIMA (DETACHMENT D /13) Arrive ULITHI Complete interim upkeep rearming, etc. Arrive OKINAWA (ICEBERG D - 6)	Feb. Feb. Feb.	5 19
Group B	Depart IWO JIMA (DETACHMENT D/ 10) Arrive LEYTE Complete upkeep, rearming, rehearsals Arrive OKINAWA (ICEBERG D - 1)	Jan. Feb. Feb.	2 24
Group C	Assemble in GUADALCANAL Complete rehearsals etc. Arrive OKINAWA (ICEBERG D - 1)	Jan. Feb. Feb.	19

Upon arrival at the objective Groups B and C would combine to form the relief for Group A which could then retire to LEYTE for replenishment of ammunition.

3. CLOSE AIR SUPPORT UNITS

Of the 18 CVE now temporarily allocated to the 7th Fleet,

Pac-124-rr

it is expected that 9 will be returned for employment in DETACHMENT, after which they will be available for employment in ICEBERG. The remaining 9 will be returned to the control of Pacific Ocean Area Forces about 1 February, in time for use in ICEBERG; these are exclusive of CVE employed as oiler escorts and as ASW units; and are exclusive of transport CVEs.

These 18 CVEs should be disposed approximately as follows:

Screen for advance Fire Support Group

8 CVE

Screen for Amphibious Force mounting in LEYTE

4 CVE

Screen for Amphibious Force mounting in SoPac

4 CVE

Screen for Amphibious Force mounting in MARIANAS

2 CVE

4. MINESWEEPING GROUP

The Minesweeping Group should depart LEYTE or ULITHI in time to reach the objective with the fire support units arriving on D - 6; this group should receive adequate air support from the escort carriers which accompany them and from aircraft of the covering force.

The approach to the objective should be on a northwesterly course leaving KOBA JIMA and KUME SHIMA to the northward then circling to the north, northeast and finally southeast in order to reach a disembarkation area along the western beaches of OKINAWA. The approach courses shown on Annex 3 to Appendix C take advantage of deep unminable waters where possible, through which the fleet can proceed without the necessity of sweeping. Although there is no evidence of mines immediately westward of OKINAWA, the final approach track for a distance of about 20 miles, where depths of less than 500 fathoms are encountered, should be swept on D-6 in order to permit close approach of the fire support group. The area adjacent to selected landing

Tac-12-eiw

beaches inside the 100 fathom curve should be swept during the period between D-5 and D-1; this area contains about 15 sq. miles.

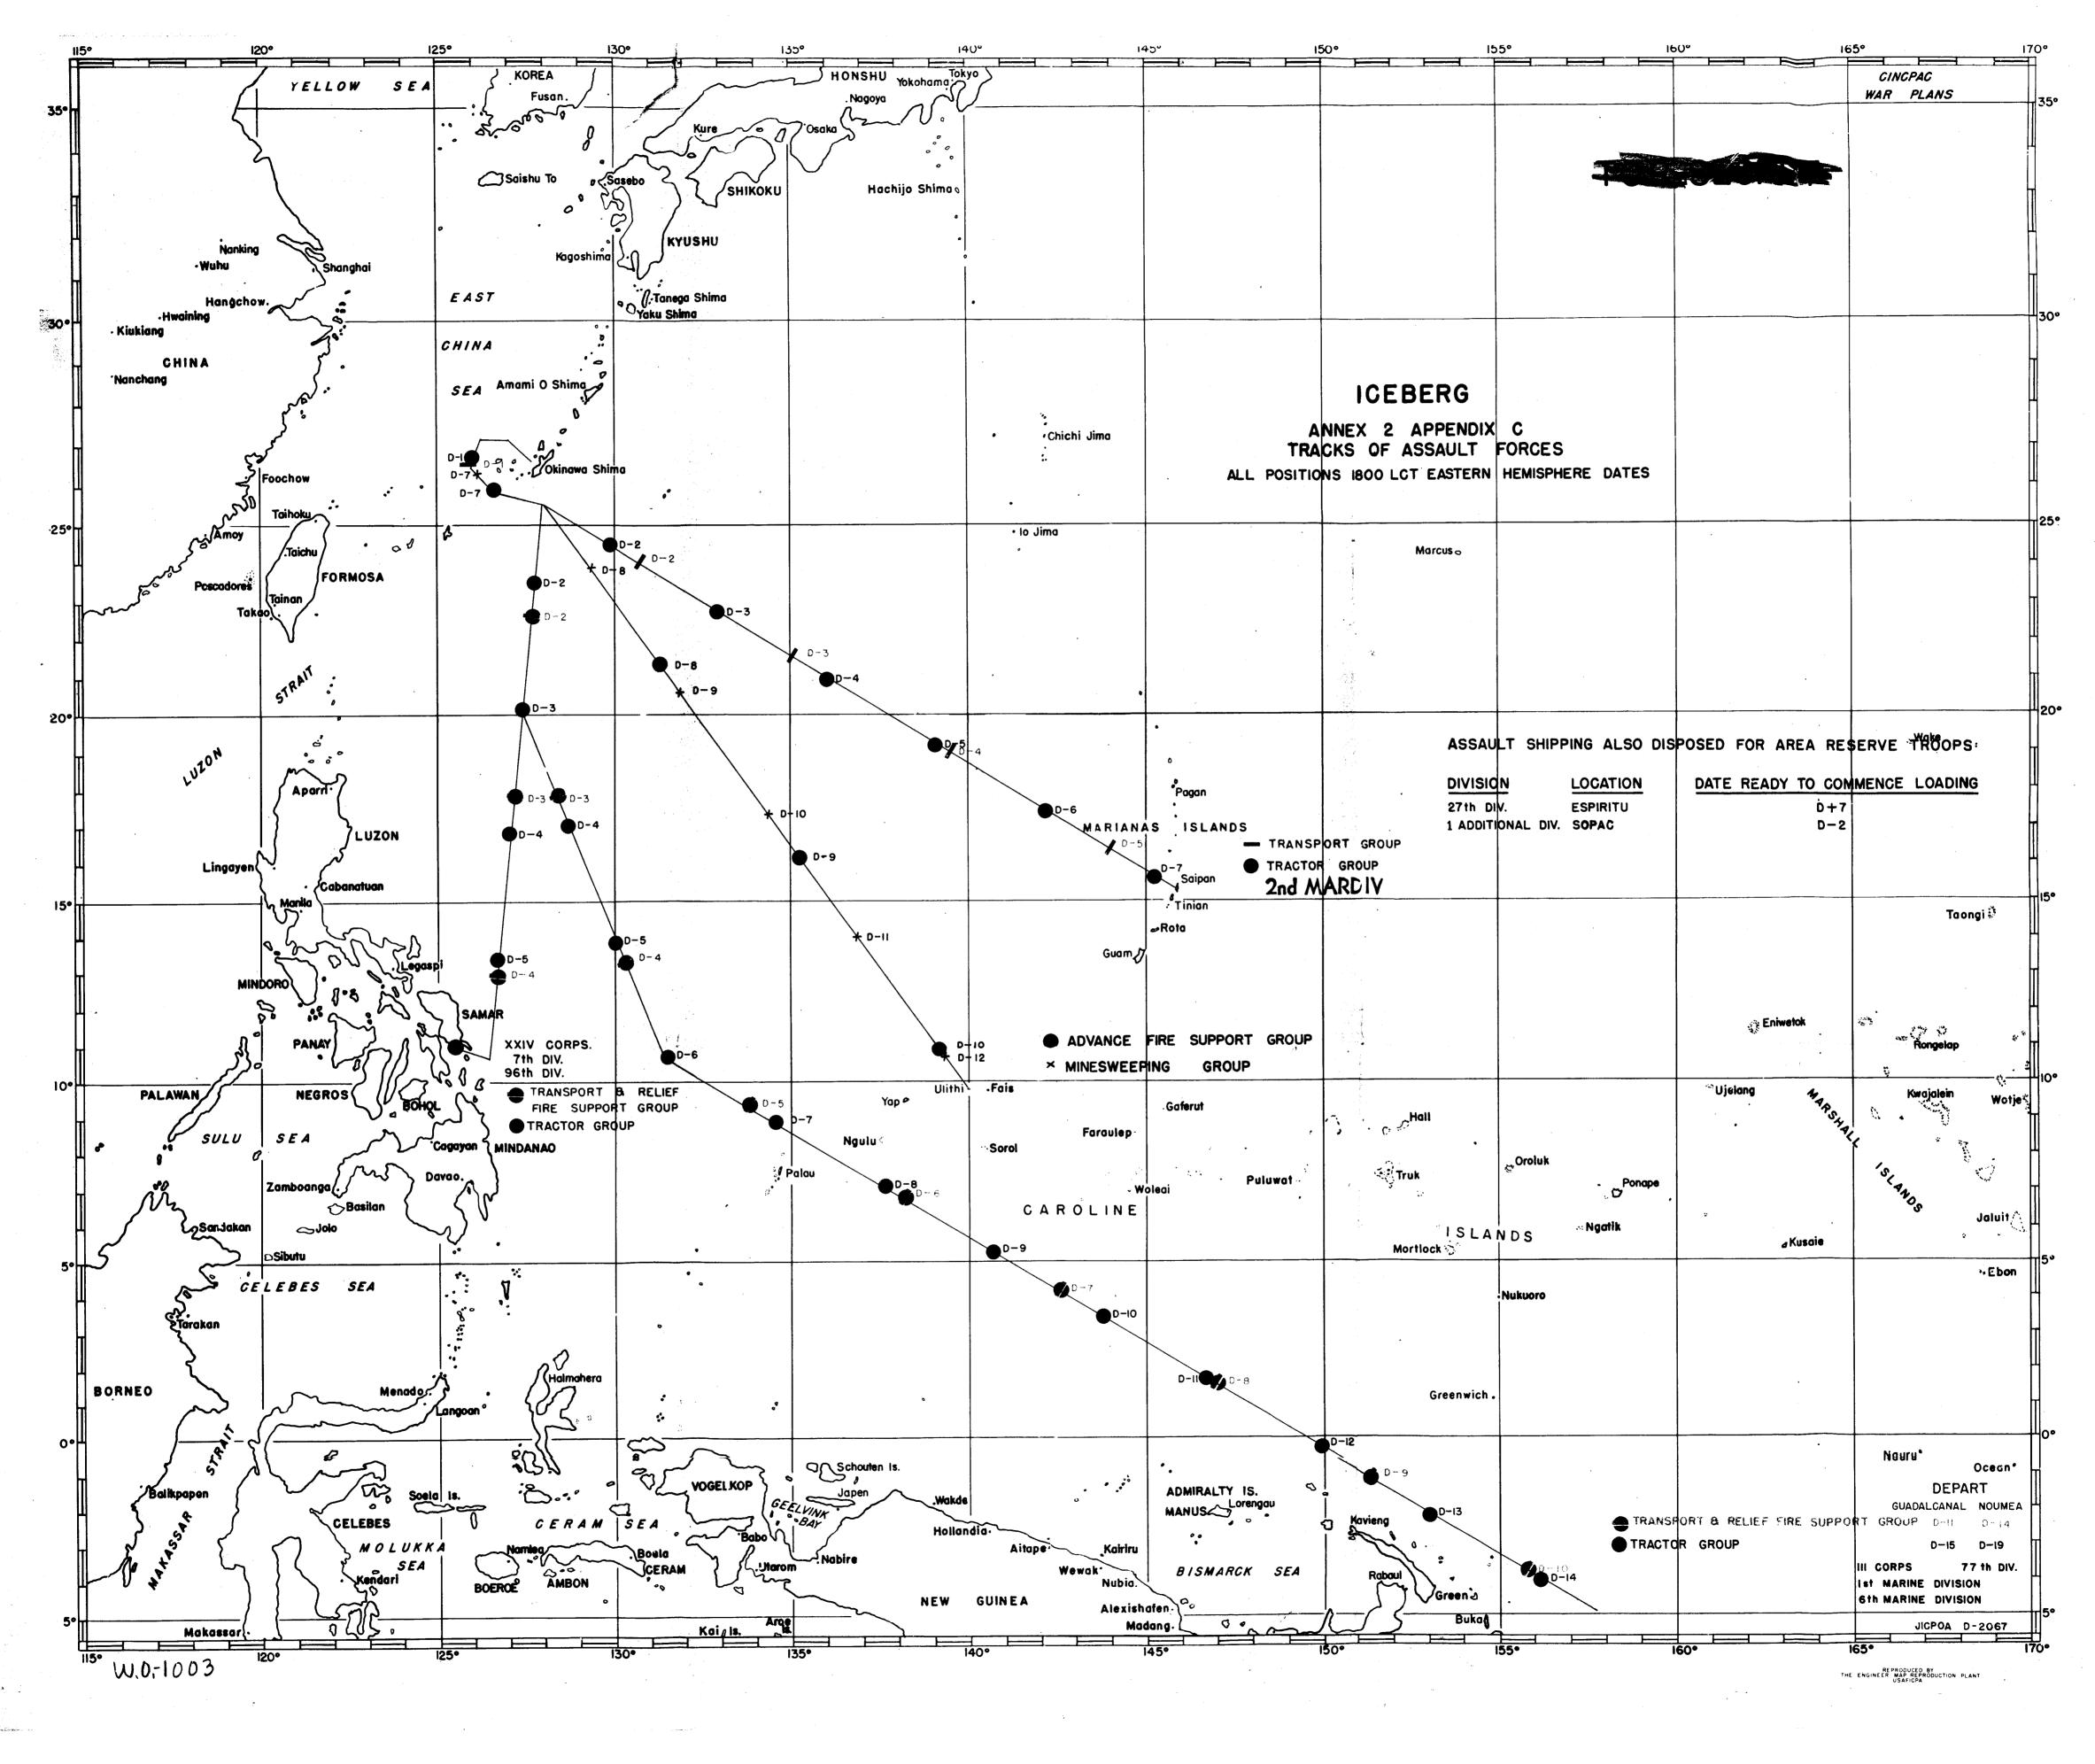

5. COVERING FORCE

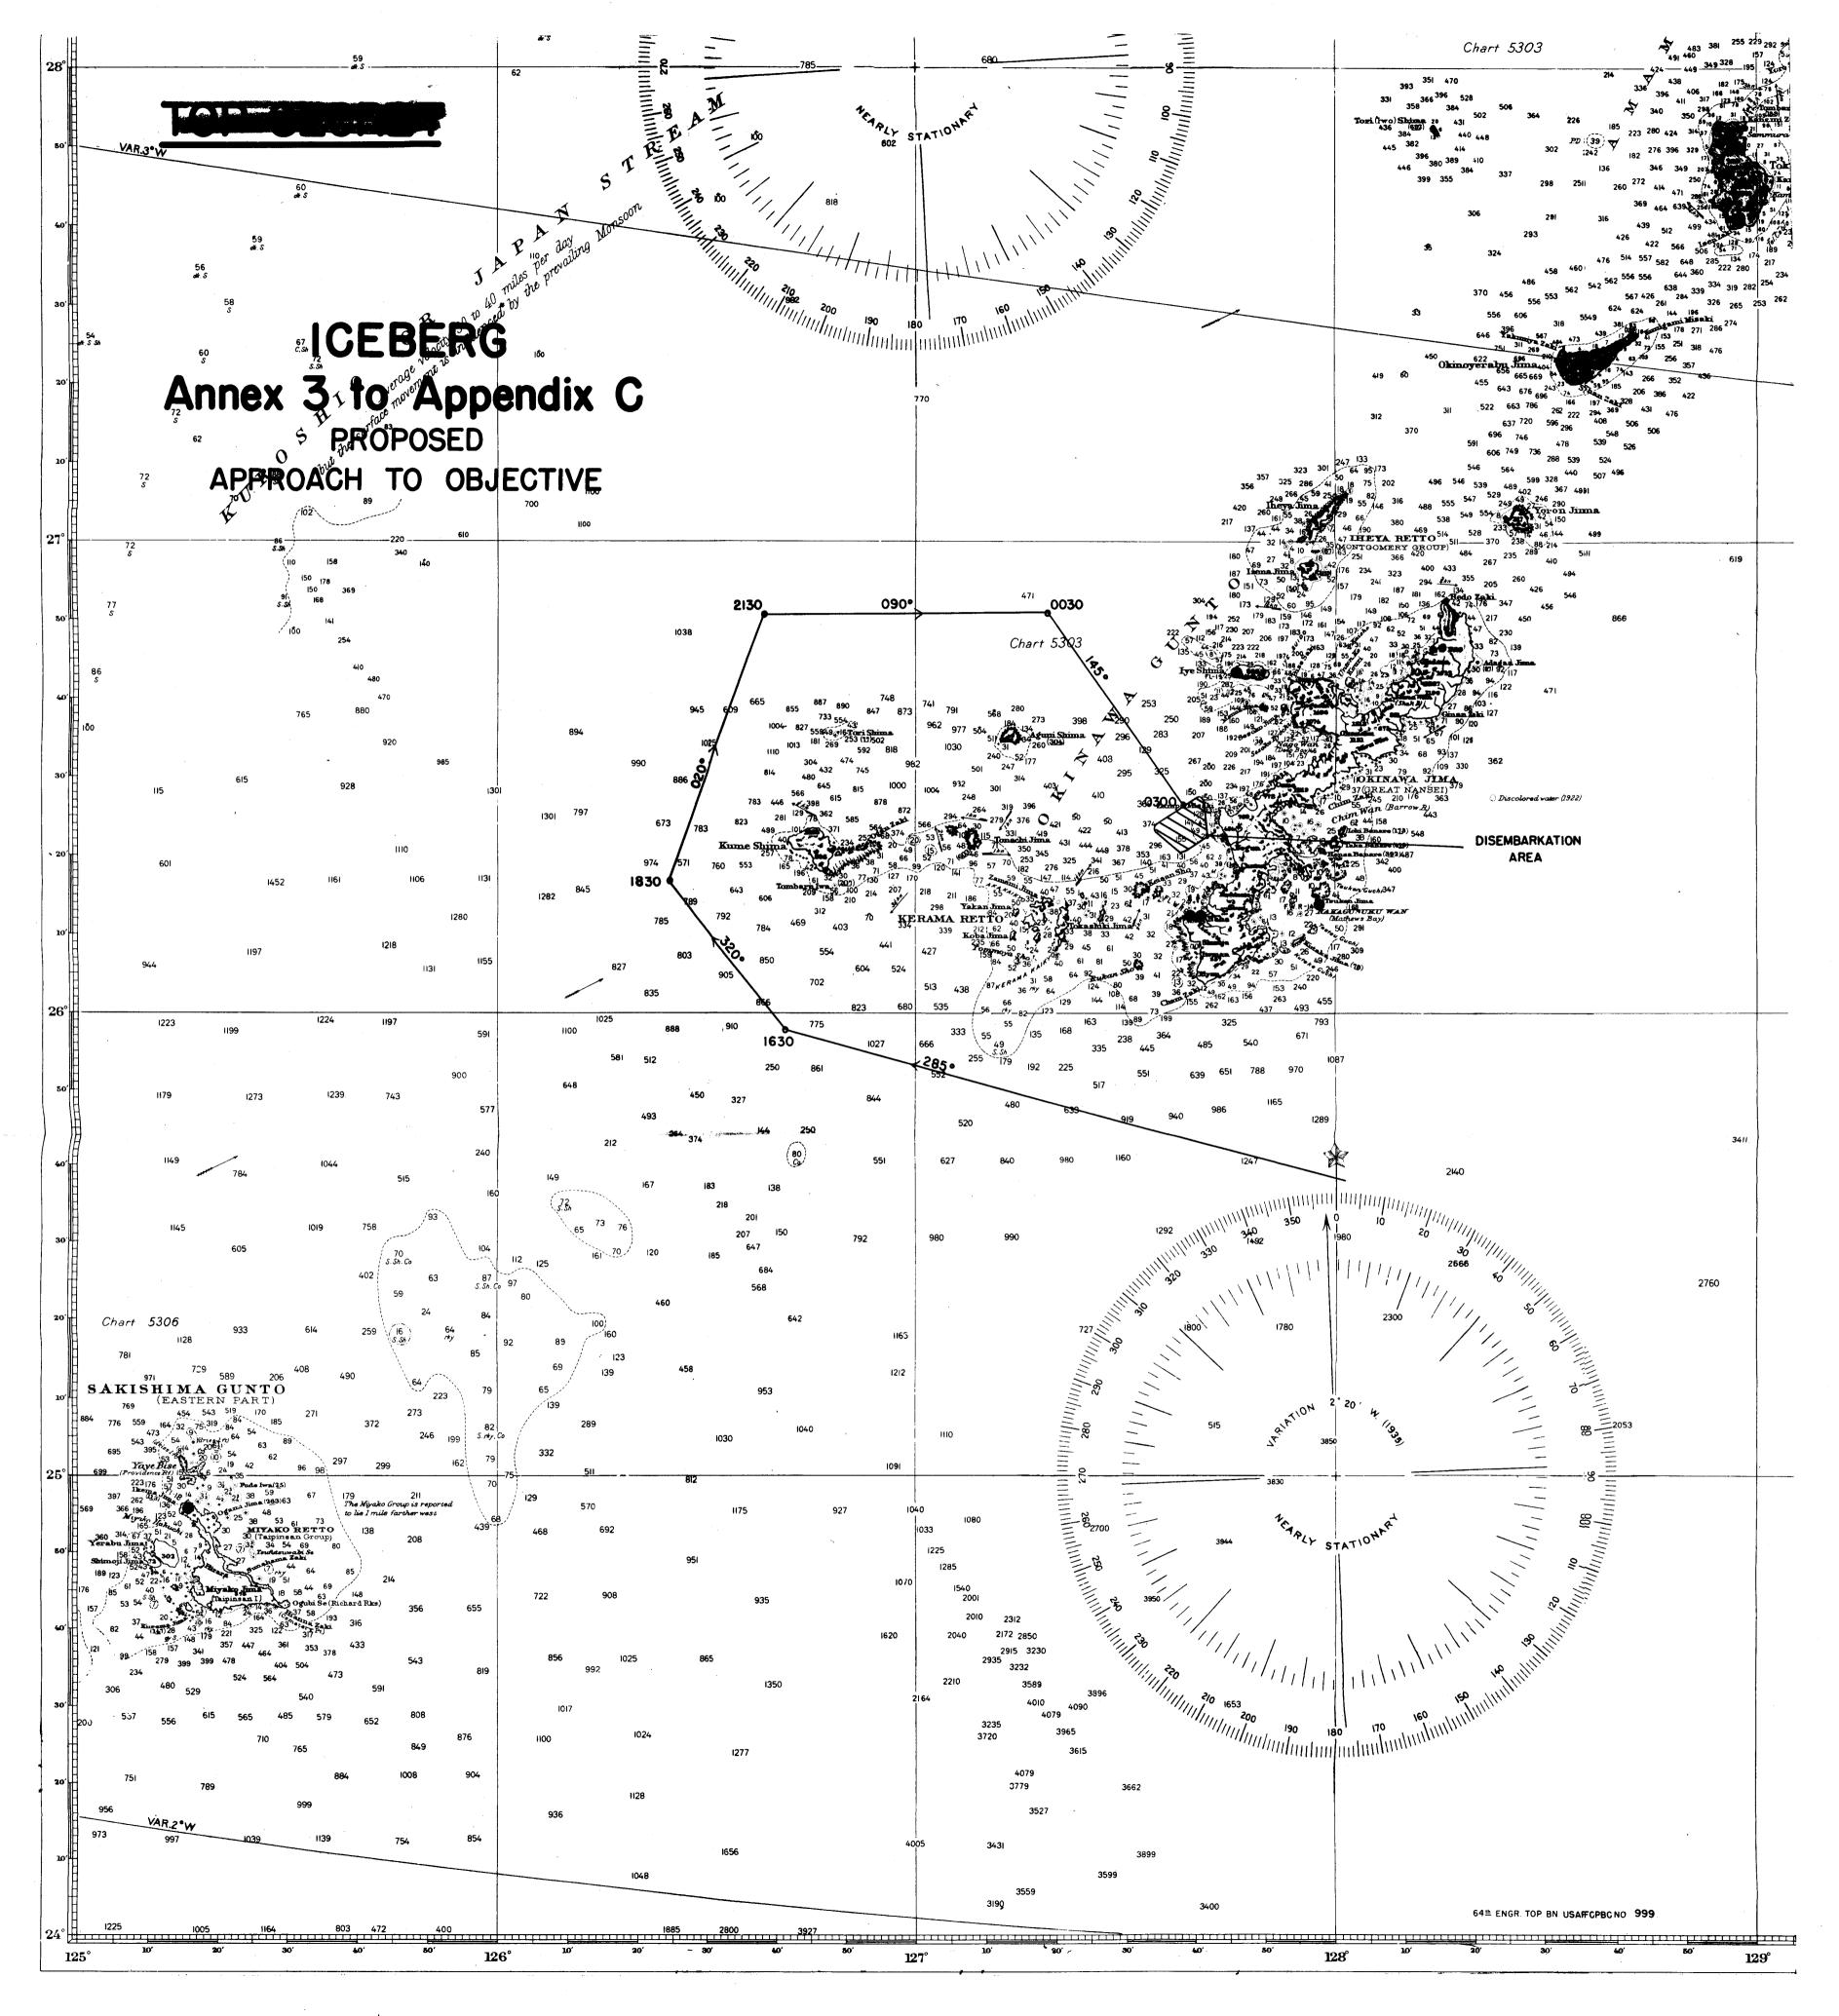

Operations of the Covering Force are described in Appendix B. Battleships and cruisers are expected to be provided with HC ammunition to about 15% capacity; this should be expended against selected targets at the objective. After preliminary air strikes, the operations of the Covering Force will be governed by the activities of enemy naval and air forces, and by requirements for tactical air support at the objective.

ICEBERG

Appendix D

Submarine Operations

1. <u>DISCUSSION</u>.

Commencing about February 1, it is expected that shore based aircraft operating from NORTHERN LUZON will effectively close the LUZON STRAIP to enemy shipping; will reduce the flow of shipping to and from the SOUTH CHINA SEA to a fraction of its present volume; and will constrict the area used by this shipping to a relatively narrow belt close to the CHINA coast. Unless cargo is transhipped by land carriers through CHINA, all ships carrying even this reduced cargo must pass through the FORMOSA STRAIT.

Inability to use this shipping from the southern area coupled with an increased demand for imports from North CHINA, will tend to increase greatly the volume of shipping from JAPAN to KOREA, SHANGHAI and other North CHINA ports.

The danger of being bottled up in the SOUTH CHINA SEA Area will probably induce the Japanese to move all important naval combatant units to the EMPIRE either before or immediately after our operation against LUZON. Thus the requirement for our submarines in the southern area should be greatly reduced.

2. TASKS.

The augmented submarine force in the Northern Area should be disposed to perform the following tasks:

(a) Provide life-guard service in the vicinity of OKINAWA from D-30 to D-7; and in designated EMPIRE areas from D-20 to D/20; and in designated areas around FORMOSA and SAKISHIMA GUNTO from D-20 to D/15.

Pac-124-jh

TOTAL PROPERTY.

- (b) Provide strong submarine patrols south of OKINAWA JIMA and north of AMAMI O SHIMA in order to intercept and destroy enemy forces attempting to threaten our operation or attempting to retire from the area.
- (c) Maintain patrols in areas around commercial terminals in the EMPIRE; in the area north of FORMOSA STRAIT; and across the shipping lanes from the EMPIRE to North CHINA ports; in order to inflict maximum attrition on enemy shipping.
- (d) Be prepared to concentrate as required to provide strategic or tactical support of the 5th Fleet.

3. RESTRICTIONS.

Operating zones and bombing and attack restrictions will be prescribed in the Current CinCPOA Operating Procedure, with addenda and zone notices as required.

ICEBERG

APPENDIX E

LUGISTIC MEASURES

Appendix E is based upon the logistical requirements for Phase I only.

ICEBLRG

APPENDIX E

LOGISTIC MEASURES

1. OPERATIONAL REQUIREMENTS

The concept of operations requires:

- a. Early establishment of facilities for fleet anchorage with logistic support at NAKAGUSUKU BAY; and eventual development of an advanced fleet base.
- b. Rapid construction of airdrome facilities sufficient to support the air program.
- c. Expansion of the port of NAHA to support assault and garrison forces, planned developments in the area, and to mount forces for subsequent operations.
 - d. Installation of service elements to accomplish tasks of development.

2. FACTS AFFECTING LOGISTICS

b. Geography

OKINAWA JIMA, the largest island in the NANSEI SHOTO, lies between 26° 03' and 26° 52' N latitude and between 127° 41' and 128° 20' E longitude, commanding the sea approaches to the China Coast. The island was a key point in the communication between JAPAN and the islands under Japanese Mandate. It is a long narrow island (67 miles long and 3 to 10 miles wide), made up of plateaus and ridges with many bays offering sheltered anchorage. NAKAGUSUKU, the foremost of these, has long been used as a fleet base by the Japanese Navy. The island has a total population of 443,000 mostly concentrated in the southern half. NAHA, the largest city on the island, (66,000) is the capital of the reland group.

c. Climate

The climate of the OKINAWA area is controlled by the monsoonal circulation between the Asiatic Continent and the North Pacific Ocean. From October through March winds blow in a clockwise direction out of the region of high pressure in SIBERIA, and the resulting air flow over these islands is from the north and northeast. During April and May there is a gradual reversal in the direction of air flow, and from June through August the winds over the islands are predominatly south and southeast, a part of the clockwise circulation around the center of high pressure in the North Pacific Ocean. During the transitional months of April, May and September, the direction of air flow usually alternates several times between northeast and south. Fog and dust rarely occur on these islands. The climate is sub-tropical to tropical with mean variation only 17° to 20°. Average daily maximum temperature in summer 85° - 88° with mean daily minimum of 72° - 79°. Air temperature in winter averages between 55° and 65°. Anmual precipitation is heavy and by months is somewhat erratic. Frequently a day's downpour will equal the whole monthly average. In general summer months have the greatest precipitation. Winter precipitation, however, occurs over more extended periods than in summer. Average number of days with precipitation (.004 inches or more) are shown in the following table. Figures in parentheses indicate the average inches of rainfall.

d. Topography

The CHIMA WAN, a bay on the west coast of OKINAWA roughly divides the island in two parts. The northern portion is hilly with elevations up to 1500 feet. The southern half is less rugged and is better adapted for the development of a military base incorporating an anchorage, harbor improvements, flying fields, and other facilities ashore, being mostly of rolling and terraced hill land.

e. Hydrography

The most important feature of CKINATA'S hydrography is the existence of two large bays on the eastern coast - NAKAGUSUKU BAY and CHIMU BAY. These waters are extensive in area and offer good depths for anchorage. Large areas of land level enough for base development lie close to these protected waters. The chief difficulty in constructing ship unloading facilities is the width of the coral reefs which fringe the shores.

f. Water Supply

Because of the limestone formation of SCUTHERN OKINAWA, streams and other sources of water near the surface are scarce. Most of the many shallow wells to be found are polluted. It is believed that a sufficient supply of water can be obtained by drilling deep wells in certain areas. However, initially the employment of both distillation and purification units is indicated. NAHA had in 1936 a municipal water system supplying 400,000 gallons per day. It served 23% of the population as well as the wharves. There are 3,676 wells in the city, the water from which is polluted and unpalatable.

g. Survey of Airfield Sites

While complete topographic data is not yet available it is possible to locate existing airfields and tentatively select sites for others. Fields now operative or under construction are the MAHA Field (3 runways), MACHINATO (1 runway), KATENA (1 runway), YONTAN (3 runways), and YONABARU (1 runway). Some of these have well developed dispersal areas with revetments. The small island of IM SHIMA has a field with three (3) runways and evidences of two more underway. Most of the possible sites lie in the coastal flats in the southern portion of OKINAWA but additional runways of fighter length may be feasible in the northern portion.

h. Health and Sanitation

(1) General

There is very little direct information as to health conditions on the target. Due to the climate, water supply, type of sewage disposal and number and type of civilian population on the island, it should be assumed that health conditions will be poor. Mosquitons are numerous throughout the year.

(2) Civilian Population

There is a low standard of public health and medical facilities on

this island. Living conditions are inferior to those in JAPAN. Night soil is used as fertilizer. Rats and disease bearing insects are common. Some locally produced foods are said to be sufficient; however, rice must be imported. Nutritional deficiency diseases are present.

(3) Diseases

The following diseases will be of military importance:

Malaria

Enteric diseases (diarrheas, dysentery and parasites)

Scrub typhus

Dengue

Filariasis

Venereal diseases

Skin diseases

The following diseases are of potential importance:

Cholera

Plague

Relapsing fever

Schistosomiasis

Typhus

Tuleremia

Yellow fever

i. Communication Survey

(1) Telephone, telegraph and cable

(a) Submarine Cable

OKINAWA has a submarine cable connection with FORMOSA and JAPAN via other islands of NANSEI SHOTO, and also with YAP. Terminals for these cables are in the vicinity of NAHA and SANAPI.

(b) Telephone and Telegraph Systems

NAHA is the center of a telephone and telegraph system connecting principal places on the island. Size and guage of the cables are unknown.

(c) All plans for communication installations should be prepared on the premise that no enemy equipment or material will be salvageable and that all necessary equipment must be supplied.

(2) Radio

Existing radio installations in OKINAWA Area are as follows:

IZENA SHIMA - one station - 45 miles North of NAHA.

OKINAWA - four stations within 3 miles of NAHA.

KUME SHIMA at GIMA - one station - 47 miles West of NAHA.

ZAMAMI or YAKABI SHIMA - one station - 17 miles West of NAHA.

AGUNI SHIMA - one station 32 miles Northeast of NAHA.

Existing lookout stations are as follows:

HEDO SAKI on Northern tip of OKINAWA.

KUME SHIMA.

CHIYAMU ZAKI on Southern tip of OKINAWA.

A power plant is located near NAHA NAIKO.

A radar tower is reported in vicinity of NAHA.

The southern portion of OKINAWA is apparently suitable for radio transmission and reception to East, South and West.

j. Public Utilities

(1) Electric Light and Power Facilities

The OKINAWA Denki Kaisha (Electric Company) supplies electricity for light and power in both NAHA and SHURI. The generators of this company are run by steam from coal-fired boilers and their capacity in 1938 was 2300 kW. It is believed that there are small generators in the larger villages and towns. No gas installations have been reported.

(2) Water System

The only extensive water piping system on the island was completed at NAHA in 1935. In 1938, it served 3,244 households with 400,000 gallons of water per day over 30 miles of pipe.

(3) Sewerage

NAHA has the only modern sewage system with 34 miles of pipe.

k. Military Government

Discussion will be issued separately at a later date.

1. Transportation

(1) Roads

The rugged terrain features of the Northern half of OKINAWA JIMA have

пов стата

2. FACTS AFFECTING LOGISTICS.

k. Military Government.

(1) Characteristics of Inhabitants.

The population in 1940 was 442,497. This is a population density of about 1,000 per square mile compared to only 243 per square mile on SAIPAN. However, since the population is concentrated in the southern portion, the density in that portion which we expect to develop is far higher. There are two principal towns, one with a population of 65,700 and a second with 17,500. The population is more than 20 times that of GUAM while the area is only twice as great. The natives of this area are not true Japanese. The area was semi-independent with political and cultural ties with China until 1879. Since that date the Japanese have imposed their educational and political system on the natives with marked success. However, the fact that practically all governmental, educational and commercial posts are filled by Japanese from the main islands and the fact that mainland Japanese look down upon the natives has led to some degree

These natives are the same type as those found upon SAIPAN and TINIAN as the latter emigrated from the OKINAWA area in search of better living conditions. In OKINAWA the great majority of the people are small scale farmers and fisherman. The standard of living is lower than on the main islands of Japan. Generally speaking the people are poorly educated and will be apathetic both towards our forces of occupation and towards making any effort to aid themselves under the occupation. The small element of the population from the main islands will, if possible, be repatriated by the Japanese before occupation and those who fall into our hands will be antipathetic and must be placed under detainment pending screening and probable internment.

(2) Plans for Administration.

(a) Law and Order.

No figures are available on the number of mainland Japanese we may expect to find. However, to provide for internment of these and of such elements among the natives as may be potentially dangerous, provision must be made for an internment camp capable of expansion to hold 10,000 people. During the

assault phase this camp will consist merely of a wire enclosure and emergency shelter constructed of salvaged materials.

(b) Labor

Central pools of laborers will be established under Military Government officers designated as labor supervisors. The allocation of laborers will be on a priority basis and under uniform wage scales established by the Island Commander. Payment of wages due will be centralized under Military Government finance officers and be chargeable to the allotment of funds made available to the service involved.

It is estimated that the Military Government section of the Island Commander's staff will be able to furnish upwards of 30,000 civilian laborers should any such number be required. The rate at which they could be furnished will depend on the rapidity with which civilians come through our lines and the extent to which they have been demoralized by the preliminary assault. Such labor, however, will be very largely unskilled and will require provision of interpreters and supervisory personnel,

(c) Finance.

CNO Top-Secret Serial 0210513 of 9 September advises that the JCS have approved in principle the issuance of supplementary military yen currency for use in troop pay disbursements, military government, and other official purposes. For the OKINAWA area 300,000,000 Yen of this currency will be provided initially. Other yen currency, which is legal tender in the area, will continue in circulation and will be inter-changeable at par with the Supplementary Military Yen. Transaction in any other currency will be prohibited. No exchange rate between the military yen brought in by our forces and U.S. dollars has been established to date. All supplemental military yen will be in the custody of Military Government finance officers. Allotments will be made on request to all military units for troop payments and other expenses.

(d) Industry

Sugar refining on a small scale is the only industry of even minor importance on the island. As in the case of SAIPAN it is expected the mills will be destroyed and the sugar cane fields will be required either for military installations or to produce subsistence crops for the civil population.

COPE SHEET

There are unimportant iron, coal and sulphur deposits in the North Central section, salt beds and a small quarry in the southern section. The cuarry could be worked for building or road-making materials.

The principal agricultural products are sugar cane and sweet potatoes. Sugar cane is the commercial crop and sweet potatoes the major subsistence crop. Small scale stock-raising is widespread and pork constitutes a major item in the native diet. Fishing is important to the native subsistence. It is estimated that the displacement of the population necessitated by the development of military installations on the best agricultural land plus the cessation of fishing, dispersal of livestock and the demoralized condition of the population will make necessary the importation of food for the civil population and that it will be a considerable period before this can be corrected in part by importation of seed and implementation of an agricultural program.

(e) Resources Useful to Us

Aside from labor and a very limited amount of building materials no resources can be expected. An agricultural program and restoration of fishing can contribute towards the support of the civilian population.

precluded the development of even the primitive road net found in most of the Japanese Islands. The developing of a road system sufficient for our military needs would involve considerable equipment and time. Railroad facilities are not known to exist in this area.

The southern half of OKINAWA JIMA has a population upwards of 300,000 people, which would indicate an intricate road net for the area. The only road known to support two lanes of traffic is a short stretch of a few miles connecting NAHA and SHURI. This road is surfaced with stone blocks. It is doubtful if it would support American military traffic. Roads that correspond to arterial highways, appear to be only 12 feet wide and of coral surfacing. Other roads are probably like our country lanes. The use of horse-drawn 30-inch narrow guage railroads is evidence that local roads will not support ordinary traffic requirements.

Until aerial photographic coverage is available to indicate otherwise, it must be assumed that a complete rebuilding of the OKINAWA JIMA road not will be necessary. Such expedients as one-way traffic, separate routes for tracklaying type of vehicles and rigid traffic control are indicated.

The study of local materials available for road construction and the nature of the terrain in the southern half of OKINAWA JIMA would indicate that excellent roads can be constructed with modern equipment. Three two-lane all-weather highways, in and out of NAHA, will be required for military purposes including the moving of cargo handled at the port. A like number of similar roads will be required for the movement of cargo, to and from discharge facilities on NAKAGUSUKU WAN.

(2) Railways

A 30-inch guage steam railroad connects NAHA with West Coast communities on the southern half of OKINAWA. It is probable that these railroads have been used for transportation of the heavier military equipment used by the Japanese in the island fortification program. A cross-island branch also connects NAHA with YONABARU on NAKAGUSUKU BAY. To what extent the horse-drawn lines running south from NAHA to ITOMAN and north along the east coast from YONABARU can be adopted to military traffic cannot be determined at this time. Lack of information on the condition of road beds and equipment, and the probability of

destruction as a defense measure makes the use of the railway questionable.

m. Harbors

(1) Capacity

Little is known of the existing cargo handling capabilities either of NAHA Port or facilities on NAKAGUSUKU BAY. It is estimated that the existing waterfront facilities at NAHA will accommodate 50,000 MT per month and with improvement of shore transportation facilities increase to 105,000 MT per month. A moderate dredging program in NAHA Port to improve the channels for shallow draft vessels (IST, LCT, ISM, etc.) should increase the port capabilities by an additional 120,000 MT per month, aggregating a maximum of 225,000 MT per month one way. Present intelligence indicates that facilities in NAKAGUSUKU BAY will have to be new construction.

(2) Facilities

Existing facilities at NAHA consists of a 835 foot coment pier and a 475 foot cement pier, with approximately 18 feet of water alongside. The configuration of the harbor entrance procludes ships larger than an IST. It should be noted that the sinking of an IST within the harbor might immobilize the water-front facilities. Aerial photography may disclose facilities in NAKAGUSUKU BAY of which we are not now aware. Additional facilities for small craft serving the fleet will be required.

(3) Berths

Bow and stern moorings to accommodate 10 ships will be required at NAHA. Ample anchorage areas are available at NAKAGUSUKU BAY.

(4) Development

Operations in the vicinity of NAHA will be from bow and stern moorings by large or landing craft to shore facilities. Piers or wharves for liberty ships are not practicable. Prevailing weather conditions make the use of pontoon type piers undesirable.

In the absence of intelligence to the contrary, it will have to be assumed that beach landings in NAKAGUSUKU BAY will accommodate discharge of cargo until shore facilities can be constructed. Development of 13 Liberty ship berths is desirable and should be constructed if practicable.

3. TROOP AND TONNAGE REQUIREMENTS

a. In setting up the troop lift and tonnage requirements, the following assumptions are made:

(1) Estimated tonnage lift per man		ip. Initial st. Material	Maint.
	Total <u>Lift</u>	Initial <u>Lift</u>	Later Echelon
Divisional Corps & Army Tactical Troops	5 MT	2	3
All other Troops	10 MT	5	5
Subsequent Maint. Requirements	.8 MT pe	er man per m	onth

(2) Loading Capacities without Stowage

AP's - 1500 personnel and 2000 MT

ΛK's - 9000 MT

5. EVACUATION PLAN

a. Casualties and Replacements

Estimate of Casualties

Dead and Missing	5,000
Local hospitalization	7,000
Requiring evacuation	13,000
Total Casualties	25,000

b. Surface Evacuation Facilities Required

Casualties will be evacuated by surface vessels from the target to the MARIANAS, supplemented by air evacuation as soon as suitable landing fields are available. Sufficient hospitalization will be provided in GUAM and SAIPAN to stage these patients. Evacuation from the MARIANAS to rear area hospitals in SoPac and OAHU will be by surface and air utilizing regularly established services as far as possible.

Surface shipping required. It is estimated that a total of 10 AH's will be required, to be utilized as follows: 2 AH's for Fleet Support, 2 AH's for evacuation between the MARIANAS and rear areas, 6 AH's for evacuation from target to MARIANAS. Evacuation from target will require the following:

	-	<u>Patients</u>				
6	ин	9,00A	(3	round	trips)	
3	АРН	2,100	(1	trip)		
13	APA.	1.900	(1	trip)		
	· · · · · · · · · · · · · · · · · · ·	13,000				

c. Air Evacuation

hir evacuation facilities required:

GUAM	SOPAC	200	ComGenPOA (ATC)	D / 21

d. Care of Civilians Lee Next Page

Instructions will be issued separately at a later date.

5. EVACUATION PLAN

d. Care of Civilians

(1) <u>During the Assault Phase</u>. 340,000 out of a total population of 440,000 live in the southern half of the Island. It is practically certain that they will be cut off from any possibility of escape to the northern section and that the principal city of 65,700 and the principal town of 17,500 will be largely or completely destroyed. Based on the estimated number of civilians in the area, the anticipated advance of our lines and assuming 10% killed, it is estimated that the number of civilians within our lines during progressive phases of the assault will be as follows:

D / 10	26,200
D / 20	52,680
D ≠ 30	150,315
D / 40	306,000

Shipping restrictions will curtail issues of food and clothing and the supply of construction materials to the barest minimum consistent with sustaining life and curbing the spread of disease. Principal dependence must be put upon captured stocks of food, clothing and salvaged materials and to this end all units must be indoctrinated with the vital necessity for turning over all captured stocks and all captured transport for the use of Military Government. Provision must also be made during later phases of the assault for the salvage transfer and temporary storage of all such material.

Food. Subsistence for assault and garrison phases will be calculated on the basis of an 1800 calorie diet which approximate 20 oz. per person per day. Requirements for the first 30 days are estimated at 2000 tons of which approximately 600 tons should be loaded in assault shipping.

<u>Water</u>. It is anticipated that all sources of water will be polluted and that provision must be made for the supply of potable water for civilians. Rigid enforcement of the principle of sterilization by boiling will be necessary. Water purification and distillation units will be provided on a basis of providing one quart of potable water per person per day for a total of 240,000 persons.

Shelter. Shelter provided in the assault phase will of necessity be limited to that provided for the wounded and sick.

Administration. Twelve (12) Military Government camp units staffed and equipped to administer 2500 civilians each and capable of expansion to 10,000 capacity during the garrison phase will be established. These camp units do not provide shelter other than for wounded.

Clothing. It is to be expected that large numbers of civilians will come into our lines in rags. No clothing is provided in the assault shipping. Clothes, cloth and findings for 60,000 adults and 60,000 children, approximating 225 measurement tons, should be echeloned in by $D \neq 30$. Stocks of Red Cross clothing now available on the WEST COAST should be utilized for this purpose.

(2) During the Garrison Phase.

(a) Housing and Camps.

The Military Government camp echelons installed in the Assault Phase will be expanded during the garrison phase by utilization of salvage materials. Housing and buildings, other than warehouses, which are still standing or which are capable of restoration will be utilized for billeting of civilians. Civilians will be billeted on other civilians in undamaged areas where practicable. In accordance with the policy enunciated in JCS 1074/1 of 1 November 1944 and CNO Top-Secret despatch 062252 of November, non-interned homeless civilians will be afforded the minimum shelter necessary for the avoidance of disease and unrest. Existing local resources of materials and labor will be exploited to the maximum and the importation of construction materials for civilian housing will be restricted to the amounts necessary to maintain the foregoing standard when local resources are exhausted. Interned civilians will be afforded shelter equivalent to that provided for prisoners of war.

(b) Medical and Hospital Facilities required for Civilians.

It is estimated that 10,000 beds may be necessary for the care of wounded civilians during and by the end of the assault phase. However limitations of shipping and procurement preclude the furnishing of medical facilities in that amount. In order to furnish required minimal humanitarian medical care reconciled with and adjusted to the limitation of shipping and procurement the following approximate type of medical care is outlined.

ASLAULT PHASE

Required Number	Unit	Off.	Men	Total	Meas. Tons	Remarks
15	G6	120	1185	1305	5400	200-bed Tent Hospitals.
25	G10	25	150	175	1250	Dispensaries for out-patient care with 10 beds each.

^{*} May arrive in later echelons.

6. LOGISTIC SUPPORT FOR THE FLEET

a. General

Fleet units will utilize the harbors of GULM, SAIPAN, ULITHI and LEYTE for logistic replenishment. Replenishment will be effected by fleet oilers, ammunition ships, supply ships and Naval Supply Depots in GUAM, SAIPAN and LEYTE.

Limited ship repair facilities will be available at GUAM and in ServRon 10 located in ULITHI and MARIANAS. Limited floating repair facilities will be made available at LEYTE by ComServPac.

Floating storage, fuel, provisions and GSK supplies will be provided by ComServPac.

b. Floet Ammunition

Surface ships supporting this operation will be loaded with full complement of ammunition. Replenishment ammunition will be provided in AE's and AKE's loaded on the WEST COAST and located at LEYTE, ULITHI, MARIANAS or as directed by Fleet Task Force Commander. A reserve of Fleet ammunition will be available at the Naval Magazine, SAIPAN, and Naval Ammunition Depot, GUAM. Details of loadings of AE's and AKE's will be furnished Fleet Task Force Commanders by CinCPOA.

c. Fleet Fuel

Prior to the sortic from ULITHI by the Fast Carrier Task Force on or about 15 February 1945, all ships, all fleet oilers, and all floating fuel storage at ULITHI will be filled to capacity. It is estimated that there will be available at ULITHI, in floating storage, approximately 600,000 barrels of fuel oil.

Fire support groups and assault forces mounting out from ULITHI, MARIANAS, LEYTE, and SoPac as well as fleet oilers and floating storage temporarily assigned to these locations will also be filled to capacity.

Consumption of fuel oil for all surface forces engaged in the operation is estimated at 6,600,000 barrels, covering a period of approximately 30 days from departure from the various mounting points.

Commercial tankers will continue to deliver their cargoes to ULITHI via ENIWETOK, using convoy system between these two bases. Diversions will be offected by CinCPOA as necessary to meet mounting and staging requirements.

Reserve fuel storage of 300,000 barrels will be available at KWAJALEIN, 450,000 barrels at GUAM, and 150,000 barrels at SAIPAN. Approximately 1,000,000 barrels will be available in SoPac forward storage, as well as 500,000 barrels at MANUS. These latter two storages will be available in emergencies only, subject to arrangement with ComSoPac and CinCSoWesPac respectively.

It is estimated that PEARL storage will be not over 5,000,000 barrels as of 1 March 1945. The distance of 3,500 miles to ULITHI involving an average turn around period of approximately 26 days for commercial tankers places this reserve out of reach, as far as sustaining the operation is concerned once it has commenced.

Total estimated fuel required in the Central and South Pacific combined for the month of March covering the period of this operation may be summarized as follows:

ICEBERG Requirements	6	,600 ,0 00	bbls.
SoPac Requirements	ø	800,000	bbls.
MARSHALL-MARIANA-LEYT	E Requirements	800,000	bbls.
PEARL Requirements	چىنىيىيا 13.00	800,000	bbls.
	TOTAL 9	.000.000	bbls.

Flect oilers are tentatively assigned for distribution during this operation as follows:

*Immediate support basing on ULITHI (Task Force Oilers)	30
Reserve support MARSHALLS-MARIANAS	4
Local support SoPac	2
Maximum under overhaul	6
	42

*Com5thFleet will assign fleet oilers from this group as required for temporary service during the mounting phase of Amphibious Forces in SoPac and at LEYTE. In addition to the reserve oilers assigned to MARSHALLS-MARIANAS support, Com5thFleet will spot oilers in the MARIANAS as required for Amphibious Forces staging through.

d. Potable Water

In addition to the above, the following 3 AO's and 1 AOG are assigned

to potable water service:

SEVERN

(A061)

OCKLAWAHA

(4084)

PONAGANSET

(4086)

TOMBIGBEE

(AOG11)

Each of the AO's carry approximately 100,000 barrels of potable water, plus the normal cargo of drummed lubricants and compressed gases of regular fleet oilers. The AOG carries 15,000 barrels of water. These vessels may be replenished at GUAM. Water supply is also available at MANUS and may be available at LEYTE, depending upon completion of water facilities at the latter base.

In the event the PASIG (AW3) and ABATAN (AW4) are completed in time they will be available for potable water service. Each of these vessels will have a distillation capacity of 120,000 gallons per day.

7. SUPPORT OF LAND BASED FORCES - GENERAL PLAN

a. Responsibility for Supply

ComGenPCA, ComGenFMFPac, ComServPac and ComAirPac will be responsible in accordance with existing policies for the initial supply of all units mounted in the Pacific Ocean Areas, and for the resupply of all personnel and organizations to be located on the captured objectives.

ComSoPac will be responsible for the provision of adequate areas and accommodations for the rehabilitation or staging of units moved to his area, and for the coordination of the logistic support of all elements of all services stationed in or mounted from his area.

b. Supplies to Accompany Troops

The following supplies, in general, will be necessary for the initial support of the operation:

Thirty (30) days of supply of all classes except ammunition.

Water in drums or in cans sufficient for 2 gal/man/day for five (5) days.

Five (5) CinCPOA units of fire for all ground force weapons except artillery and AA will mount with 7 U/F_{\bullet}

Aircraft munitions as follows:

Fighters

- 20 Missions

Search Bombers

- 5 Missions

Strike Bombers (VBH)

- 10 Missions

Strike Bombers (VMB)

- 12 Missions

c. Supply Levels to be Established and Maintained at the Objective

The following levels of supply will be necessary to furnish continuing support and to provide against losses in supplies from various causes:

Classes I, II, and IV (loss construction materials)

Minimum level

- 60 days

Operating level

- 30 days

Class III (less Avn)

Minimum level

- 30 days

Operating level

- 30 days

Class III (Avn)

Minimum level

- 30 days

Operating level

- 30 days

Class V Ground Weapons

10 U/F

Class V Aircraft Munitions

Fighters

- 40 Missions

Search Bombers

- 10 Missions

Strike Bombers (VBH)

- 20 Missions

Strike Bombers (VBM)

- 24 Missions

d. Reserve Supplies

(1) SAIPAN

Class I - 30 days for 200,000 men

Class II and IV (less construction and aviation material) - 30 days supply for 4 1.rmy Divisions (reinforced)

Class III (less Avn) - 30 days supply drummed products for force of 100,000 men.

Class III (Avn) - 1,000,000 gal. AvGas and related lubes in drums.

Class IV - 15 U/F for 1 Army Division

20 U/F for 1 155mm Gun Bn

15 U/F for 1 155mm How Bn

OF SHOTES I

5 U/F for 1 Tank Bn (Army)

15 U/F for 1 AAA Bn (Army)

(2) **GUAM**

Class II and IV (less construction and aviation material) - 30 days supply for 2 Marine Divisions (reinforced)

30 days supply for 50,000 Navy personnel

Class III - 30 days supply drummed products for ground force of 100,000 men.

1,000,000 gal. AvGas and related lubes in drums.

Class V - 15 U/F for 1 Marine Division

20 U/F for 1 155mm Gun Bn (Marine)

15 U/F for 1 155mm How Bn (Marine)

5 U/F for 1 Marine AA Bn

(3) Service Squadron TEN

Service Squadron TEN, located at ULITHI and the MARIANAS will be stocked with the following supplies:

10 days supply in self-propelled ships of Classes I, II, III (less Avn) and IV for -

Army - 80,000 men

Navy - 10,000 men

Marine Corps - 60,000 men

e. Method of Supply

The following method of supply is tentatively established.

- (1) Prescribed stocks for this island will be built up to established levels within 150 days.
- (2) All units will be mounted with 30 days of all classes of supplies except Class V, and with 5 U/F.
- (3) Essential maintenance supplies for 30 days of all classes (except Class III Avn, and Class V) for all elements of the landing and garrison forces scheduled to be at the objective by D / 35 will be loaded on the WEST COAST and sailed approximately D 40 to arrive at ULITHI on D 5. This shipment will be held at ULITHI for forward movement on call of Commander Expeditionary Troops. This shipment will constitute the first re-supply shipment and should include one

ship fully loaded with drummed AvGas (30,000 drums) and matching lubes.

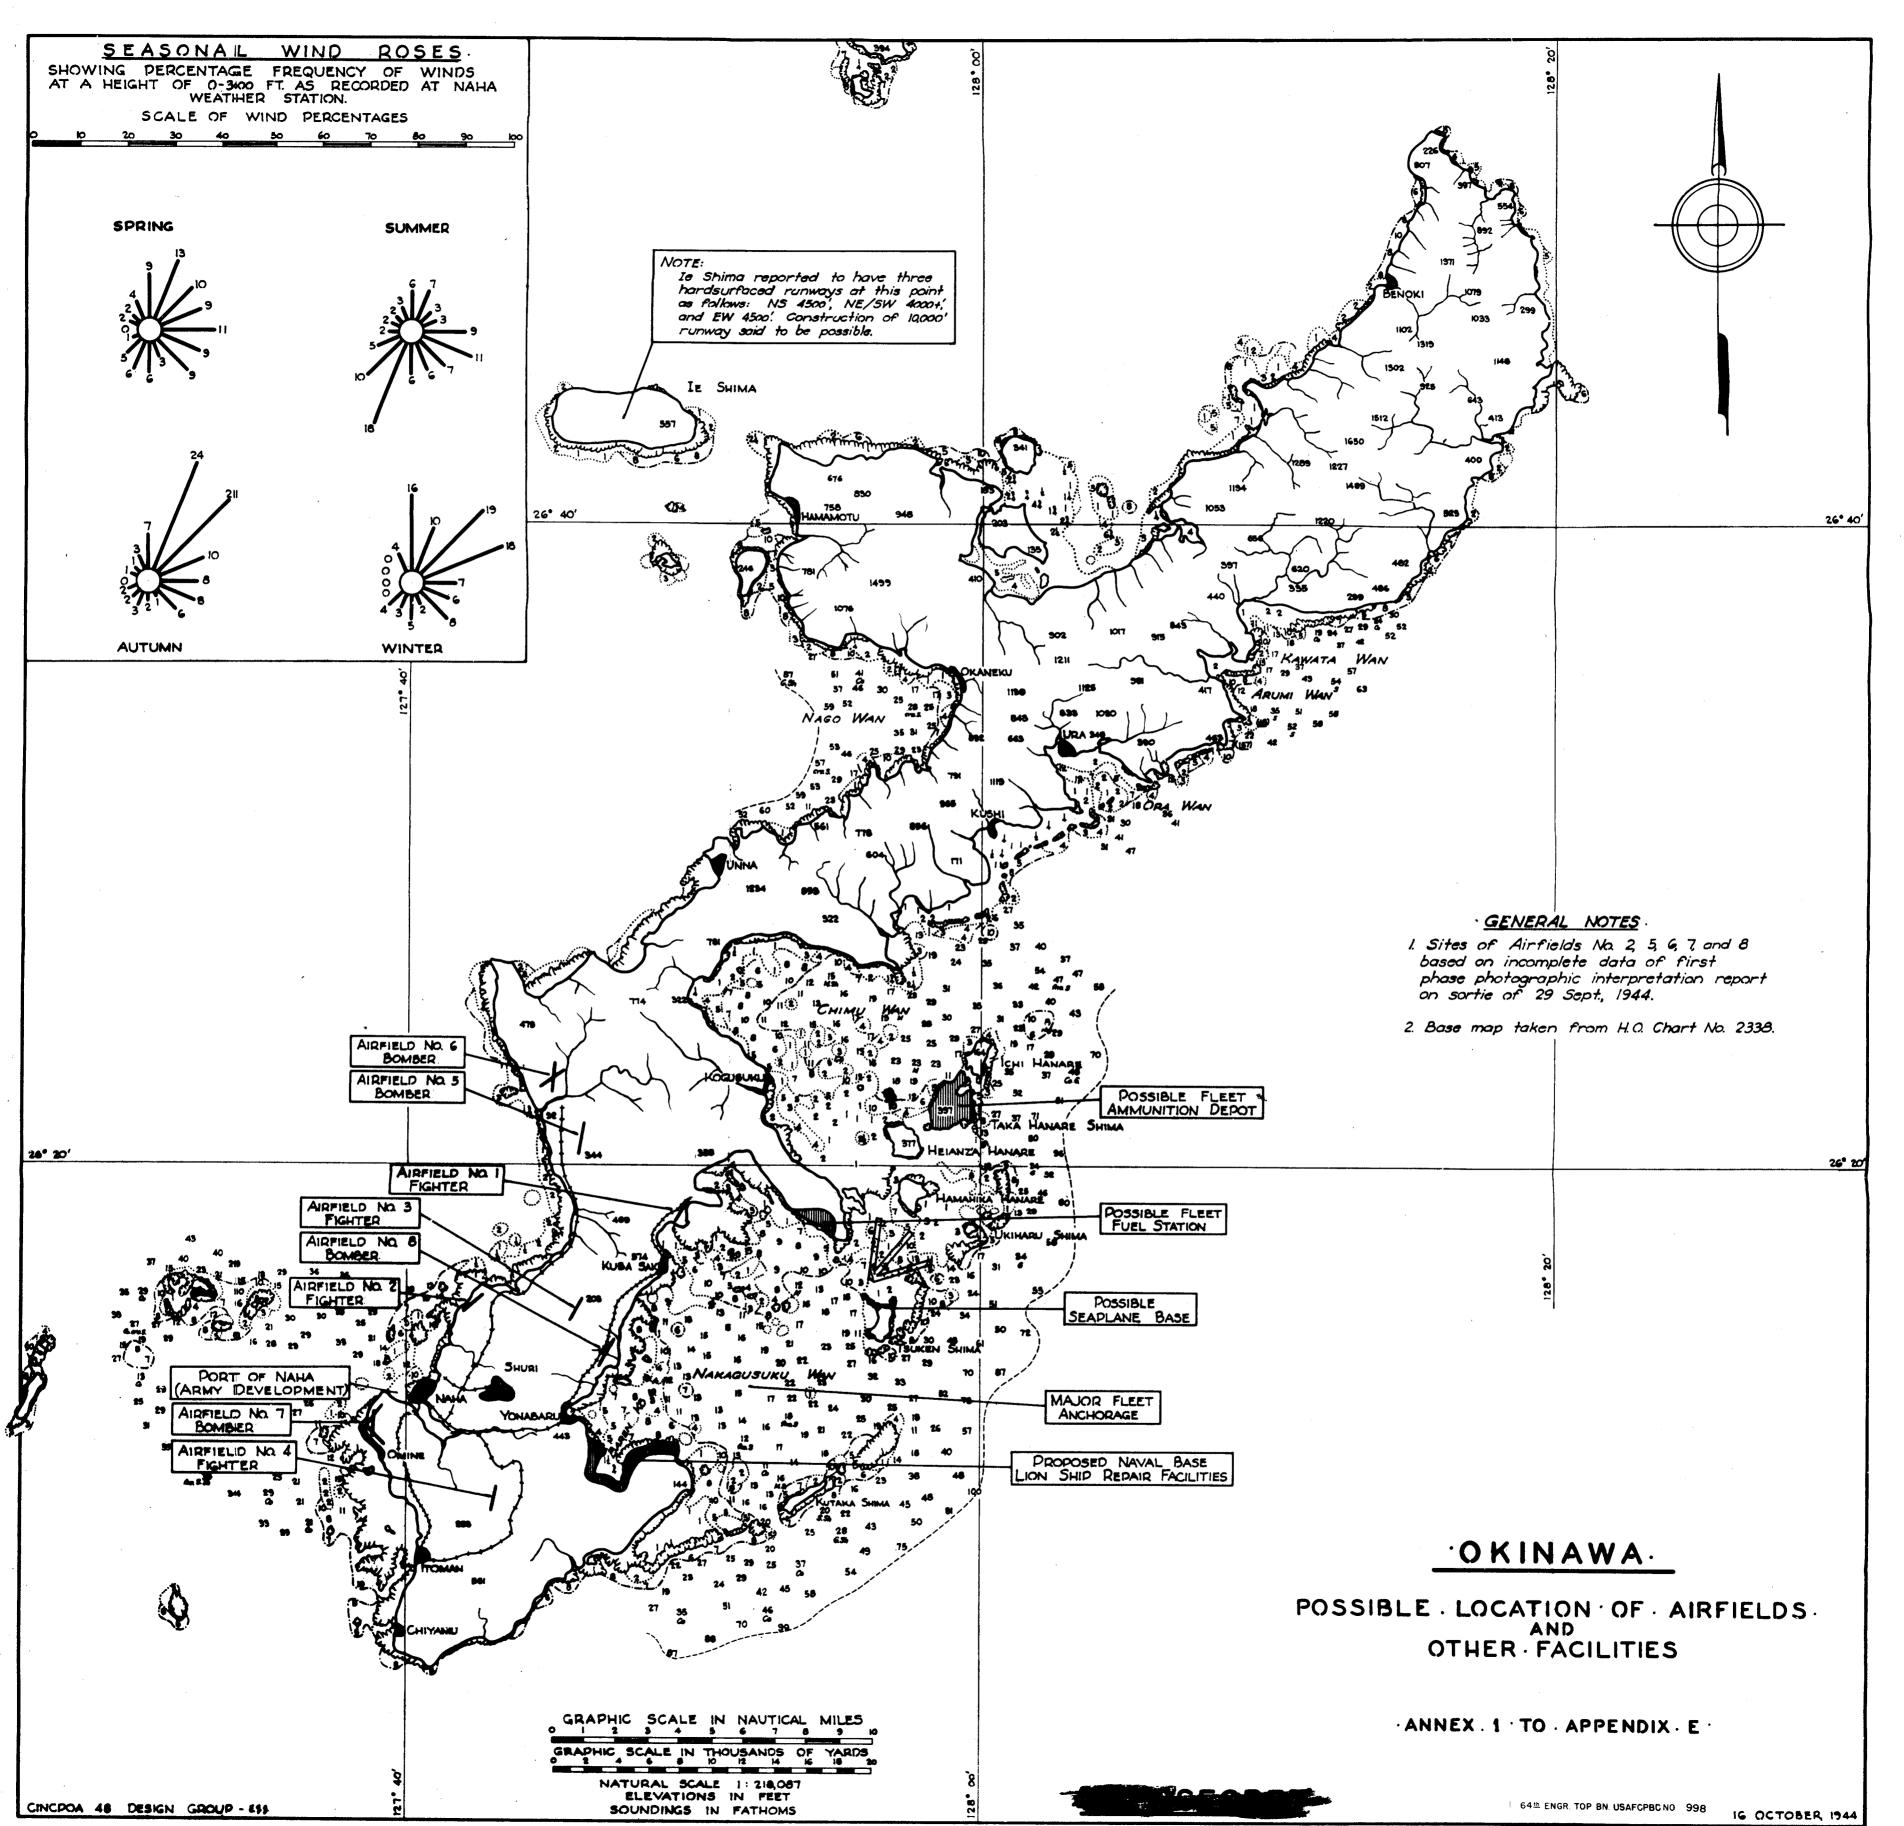

- (4) The second re-supply shipment should be scheduled to arrive at ULITHI by D \neq 5 for movement forward on call of Commander Expeditionary Troops. This shipment should contain 20 days supply of all Classes (except Class III Avn and Class V) for all elements of the landing and garrison forces scheduled to be at the objective by D \neq 35. One ship fully loaded with drummed AvGas (30,000 drums) and matching lubes, will be included in the second re-supply shipment.
- (5) Subsequent shipment of maintenance supplies of all Classes (except Class III Avn and Class V) for the support of the garrison forces will be loaded and despatched from the WEST COAST to arrive at ULITHI at 10 day intervals beginning with D \neq 15. These shipments will consist of approximately 15 days maintenance supplies until the prescribed levels are reached. Thereafter, only sufficient supplies will be included to maintain those levels.
- (6) ComServPac will arrange for barges and IX tankers loaded as below. These tankers and barges will be available at ULITHI as indicated to be forwarded to objective on call of Commander Expeditionary Troops. If not called for they will be forwarded to objective as indicated.

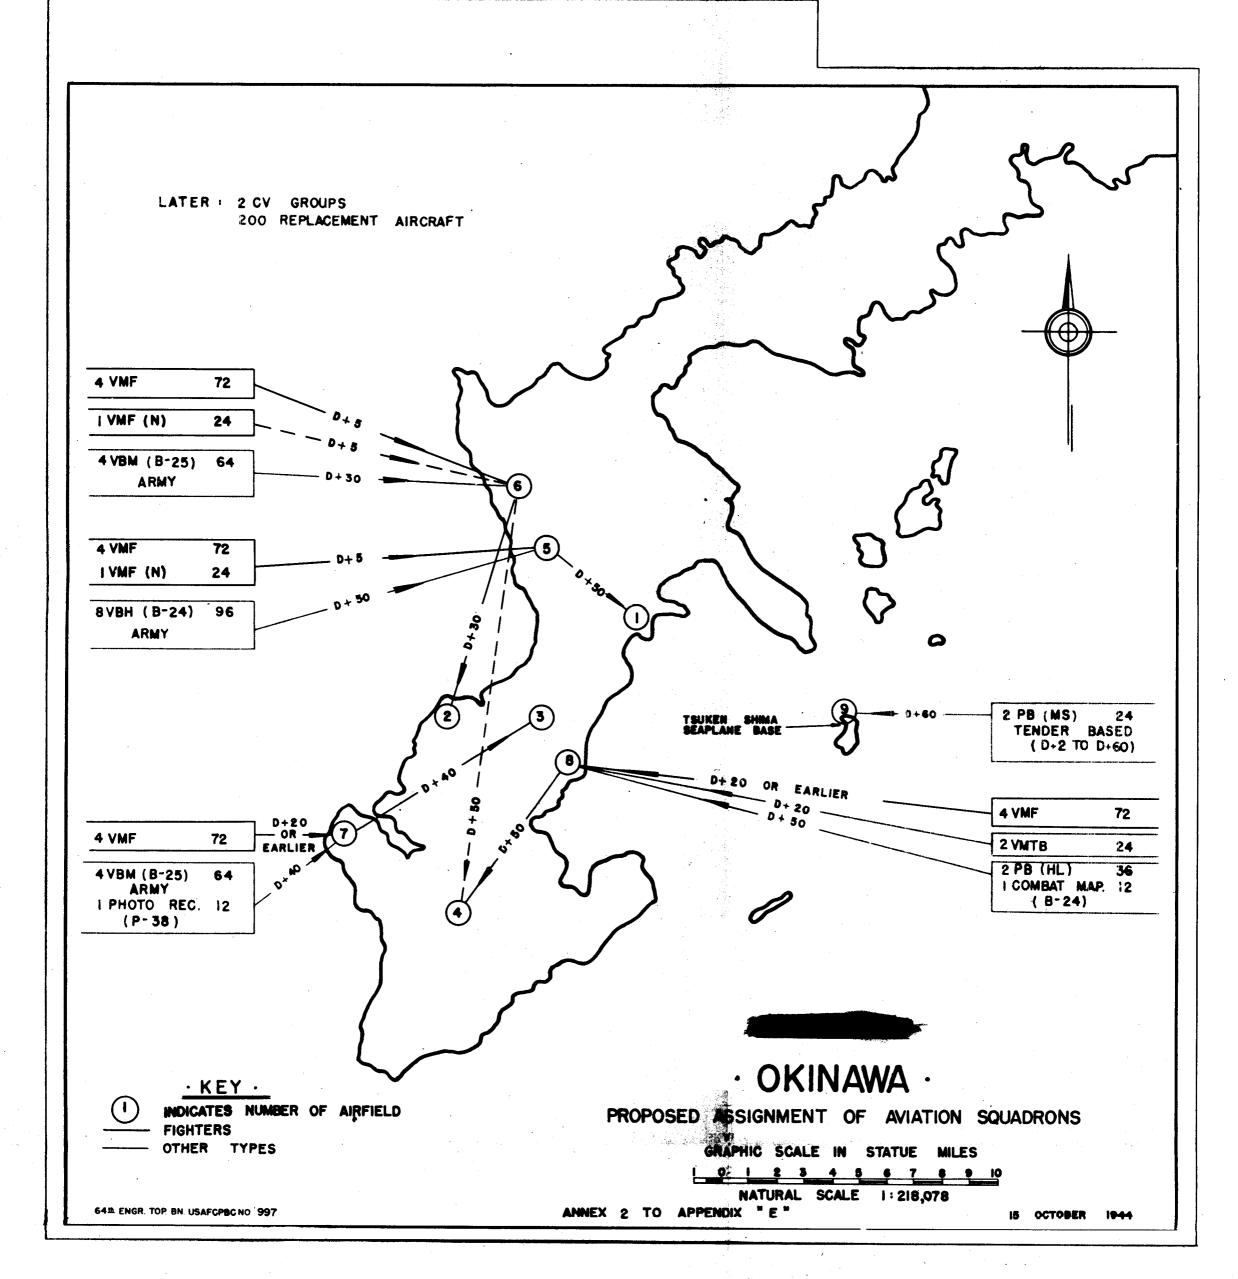

No. & Type	Capacity	Cargo	Ready Date a t ULITHI	ETA Objective
1 - AOG	12,000 bbl.	ΛνGas .	D	D / 20
1 - AOG	12,000 bbl.	Av Gas	D / 10	D 🗲 30
2 - 1.0G	12,000 bbl.	6000 MoGas 6000 Diesel	D / 15	D / 25
l - IX Tanker	70,000	hvGas & Lubes 40,000 MoGas		D / 35
1 - IX Tanker	70,000	24,000 Diesel	D / 20	D / 35

- (7) Initially all fuel will be supplied in drums. Tank farms or other bulk storage will be provided as soon as practicable.
- (8) Ammunition for re-supply of the landing forces will be loaded and despatched to ULITHI for shipment forward on call of Commander Expeditionary Troops. Shipments will be loaded and made as follows:
 - Five (5) LST's with Artillery ammunition to arrive ULITHI by D 10. Three (3) AK's each with 8 CinCPOA U/F for 2/3 of 1 Army reinforced division and 1/3 of 1 Marine division reinforced to arrive ULITHI by D 5.

MOD CROPER

- Three (3) ΛK^1 s similarly loaded to arrive ULITHI by D \neq 5.
- Three (3) AK's similarly loaded to arrive ULITHI by D / 15.
- Three (3) AK's similarly loaded to arrive ULITHI by D / 25.
- Three (3) AK's similarly loaded to arrive ULITHI by D / 35.
- (9) ComFwdAreaCentPac will be prepared to make emergency shipments by air of rations, ammunition and medical supplies.

### APPENDIX G

### PHASE II

### SEIZURE OF IE SHIMA AND OPERATIONS ON OKINAWA SUBSEQUENT TO PHASE I

### 1. GENERAL

Phase II will be initiated as soon as it is apparent that the necessary combat troops and fire support ships may be diverted from Phase I Operations. This date, W-Day, will be selected by the Commanding General Expeditionary Troops. For planning purposes W-Day is assumed to be D plus 30.

The scheme of maneuver will be designed to provide early seizure of IE SHIMA and initiation of a major airfield development, and occupation of OKINAWA to the extent required for security of our installations on IE SHIMA and establishment of control over the entire island of OKINAWA.

There is insufficient information available at present to warrant the assumption that favorable sites for air or naval development will be secured in the northern portion of OKINAWA.

### 2. GROUND FORCES

It is estimated that in this phase the seizure of IE SHIMA and OKINAWA southwest of a line joining KAWATA WAN (26° 38' N 128° 9' E) and SHANA WAN (26° 40' N 128° 7' E) will require two corps of two divisions each. One corps will probably be employed in a land advance to the northeast from positions held at the conclusion of Phase I. The other corps will be available for amphibious operations to seize IE SHIMA and MOTOBU PENINSULA and to envelop Japanese forces opposing our land advance.

After the line KAVATA WAN - SHANA WAN has been established, the Commanding General Expeditionary Troops will

TOP SHOTHER

proceed to {ain control of the remainder of the island to such a degree as to assure the security of our position. A corps of three divisions should be sufficient to establish and maintain this centrol throughout OKINAWA JIMA and IE SHIMA, thus making it possible to release the remaining divisions for third phase operations.

As soon as it becomes evident that Japanese forces have been disorganized and enemy capabilities reduced to passive resistance the number of divisions in the OKINAWA - IE SHIMA Area may be reduced to two.

### 3. AIR FORCES

IE SHIMA will be developed as an air base for the operation of two heavy bomb groups and two long range fighter groups. It is estimated that these fields will be operational for fighters by W  $\neq$  10 and for bombers by W  $\neq$  50.

### Alternate

The tactical situation in Phase I may require early capture and initial development of IE SHIMA, with forces provided for Phase I, in order to provide additional shore based air support. In this case the two fighter groups, one Army and one Marine, with supporting and service troops, scheduled for installation on OKINAWA will be utilized for this contingency. If so used, the facilities acquired at IE SHIMA will make acceptable a delay in activation of two airfields on OKINAWA. If such a diversion of forces is made those listed herein will be available for activation of airfields on OKINAWA.

### 4. NAVAL FORCES

Upon completion of Phase I, it will be desirable for reasons of security to retain in the immediate area only those units of the fire support force as will be required for the

Per Street

prosecution of Phase II. It is estimated that this will comprise about one half of the fire support force initially committed. This reduced force will be available to support the shore-to-shore operation against IE SHIMA, and the advance northward on OKINAWA as required.

It is expected that a covering force of reduced strength, carriers and battleships, will be required to remain within striking distance of OKINAWA throughout Phase II and for an indefinite period thereafter in order to prevent enemy surface ship raids, to augment the shore based air defenses, and to strike adjacent enemy positions.

Landing craft will be retained in sufficient numbers to implement the shore-to-shore assault on IE SHIMA, to provide means for shore-to-shore amphibious assaults in the northern part of OKINAWA and for use in unloading cargo ships supporting the operation.

No naval facilities other than small craft repair and minor harbor services are planned for IE SHIMA. It is expected that various bays and inlets will be discovered in the northern portion of OKINAWA which will be suitable for PT bases and for other small craft anchorages. It is not intended that any provision be made at the present time for naval shore establishment or nets except in NAKAGUSUKU WAN, KERAMA RETTO and NAHA; destroyer mooring buoys and secondary navigation buoys however should be available for several small craft anchorages which are expected to become available.

### ANNEX 1 TO APPENDIX G

### LOGISTIC MEASURES - PHASE II

### 1. GENERAL

In addition to the logistic measures discussed in Appendix E to Phase I the following factors applicable to Phase II are significant.

### 2. FACTS AFFECTING LOGISTICS

### a. Terrain

IL SEIMA lies on the northwest side of OKINAWA at a distance of three miles from the tip of MOTOBU PLNINSULA. It is a limestone island, roughly oval in form, five miles long and two miles wide. This island contains approximately 5500 acres, nearly all of which area is sufficiently level for development purposes. The island is topped by a nearly level plateau which averages about 150 feet above sea level. This area appears to have been intensively cultivated. Near the eastern end is a volcanic plug about 555 feet high called IKOSUKU YAMA or "Sugar Loaf" at the south base of which lies a large village. A major air base development has been undertaken by the cnemy.

### b. Water Supply

It is believed that an ample supply of water can be developed by drilling wells in the center of the island down to approximately sea level. In the case of this island a depth of 150 - 200 feet is indicated. The enemy has probably developed a water supply system which might be salvaged.

### c. Harbors

There is no sheltered anchorage area adjoining the island. Berthing facilities are few and concentrated near the village on the southeast shore. This is the leeward side of the islands for the prevailing winds of northerly directions. These facilities are located on embayments in the coral reef on the Southeast shore. They appear to be of solid construction. The wharf on the west side is not yet completed.

THEFT

It does not appear that the water alongside these structures is deep enough to accommodate anything but small boots or barges at high tide. There is no protection for small craft against southerly blows and it seems not unlikely that the samll developed harbor at TOGUIGHI Harbor (dredged to  $6\frac{1}{2}$  ft. in 1939) may serve for the transshipment of supplies for the support of the IE SHIMA Air Base, particularly during a period of winds from the south.

In view of the difficulty or impossibility of providing protected berthing for large ships here lightering must be considered as the only practicable means of supply. Tanker moorings could be installed on the south side of the island for delivery of fuel by submarine hose.

### d. Beach Capacities

The southern and castern shores have four firm, coral and sand beaches from 9 to 35 yards wide and 125 to 900 yards long. The remainder of the island is bounded by rocky sea-cliffs.

A fringing reef 360 to 720 yerds wide with scattered coral heads, and without channels, borders the island.

Moderate slopes lead inland from all beaches, rising about 20 feet to a border of casuarina trees. Scattered clumps of trees form two rather distant lines between the casuarinas and the airfield.

Interruption of the tree fringe behind the beaches, and breaks in the slope offer good exits in addition to the roads and trails leading inland from all beaches. These roads join with the predominantly cast-west road net which links all portions of the island. Several of the roads appear to be about six to eight feet wide and unsurfaced, although several such as the southern coast road, 135 yards inland, are about 12 feet wide and coral surfaced.

It is estimated that the above braches will afford unloading capacities totaling 75,000 MT/Mo.

### J032451046

### 3. CONTLUEPLA TED DEVELOPMENT

### a. Airfield Development

IL SHIMA is well adapted to the construction of fl ing fields because of its relatively level terrain. Approach conditions are over water and are ideal. Buch enemy construction here can conveniently be used again.

Photographic coverage shows four parallel runways which can be made ready in a comparatively short time.

Field No. 1. Photographic coverage of 10 October 1944 showed that this runway was cleared by the enemy without any grading.

Field No. 2. The runway was graded and surfaced to a length of approximately 5000 feet on 10 October 1944. A cross runway 4300 feet long, together with taxiways and hardstands, had also been completed at that date, and can probably be used again. It is planned to increase the main runway to 7000 feet for use by VBH.

Field No. 3. As of 10 (ctober 1944 one runway at this field was operational for a length of approximately 5100 feet. A taxiway system with hards tends was partly completed, and a second runway at an angle seems to have been under construction. It is proposed to recondition the present runway for fighter planes without adding to its length.

Field No. 4. T is field will be of entirely new construction at the east end of the island. It is to have a runway of 5500 feet in length.

Rendy Dates. Estimated rendy dates for airfields on IE SHIMA are tabulated below. These dates are predicated on:

- (1) Employment of three (3) Aviation Engineer Battalions.
- (2) Availability of the sites for commencing work by W / 5.

### Field No.

1 2 3 4

Operational for VF (4500' runway) W/10 W/10 W/50
Operational for VBH (6000' runway) W/90 W/50

TOR-SECTION

Final completion of the entire development is estimated at W / 230, and will provide for 5500' runways for VF and 7000' runways for VBH Fields.

### b. Naval Facilities

No facilities for support of Naval Units other than small craft is contemplated.

### c. Harbor Development and Waterfront Facilities

Installation of tanker and AvGas and MoGas barge moorings off southern shore for delivery of AvGas and MoGas by submarine line.

Transshipment from OKINAWA utilizing small craft will not be practicable during the early stages of development. Personnel and equipment for unloading AKs and APs from moorings at IE SHIMA must be provided during this period. Subsequent to the establishment of adequate port facilities on OKINAWA and when the inbound traffic on that island has passed its peak, transshipment from OKINAWA to IE SHIMA in small craft may be resorted to and some labor on IE SHIMA may be relieved. At this time the amount of labor required on OKINAWA will be increased accordingly.

Installation of AK moorings off southern shore with utilization of individual ship protective nets.

Installation of aids to navigation.

### 4. MEDICAL FACILITIES AND EVACUATION POLICY

### a. Estimate of Casualties:

Dead and missing 800
Local hospitalization 800
Requiring evacuation 2.400

Total Casualties 4,000

### b. Evacuation

Casualties will be evacuated by available AHs, APHs and APA to the MARIANAS. If LSTs or smaller vessels are utilized, casualties will be evacuated to OKINAWA for further evacuation by surface or air.

### c. Hospitalization

Initially, hospitalization will be provided by mobile hospital units. Subsequent to the assault phase, hospitalization will be provided as directed in the base development plan, and as indicated in the garrison troop list.

### d. Mcdical Care for Civilians

Assault: Estimated casualties, 700. Requiring hospitalization, 350. During the assault phase, civilian casualties will be handled by medical units designated for Military Government, assigned to the assault division. Lifter the assault phase, civilians will be cared for by medical units designated for Military Government. Civilian casualties will not be evacuated from the island.

Garrison: Medical care of civilians by units assigned to garrison forces.

### 5. SUPPORT OF LAND BASED FORCES

### a. Method of Supply

The primary method of supply will be by direct maintenance ship-ments from the West Coast.

When practicable the supply of Assault and Garrison Forces will be by utilization of LCTs, LSTs and other small craft from the port of NAHA or other accessible loading points on OKINAWA. Due to lack of facilities and heavy requirements for OKINAWA, transshipment may not be practicable in the early stages.

Provision should be made for AK moorings to unload at IE SHIMA any ships of regularly scheduled maintenance shipments, or any other cargo ship, assigned to the support of this operation.

### b. Responsibilities for Supply, Levels of Supply and Supplies to Lecompany Treeps

The same general provisions as obtained in Phase I will apply in Phase II.

### c. Shipping Instructions

L separate shipping designation for IE SHIMA will be assigned to

facilitate direct maintenance shipments to this port.

### 6. MILITARY GOVERNMENT

### a. Assault Phase

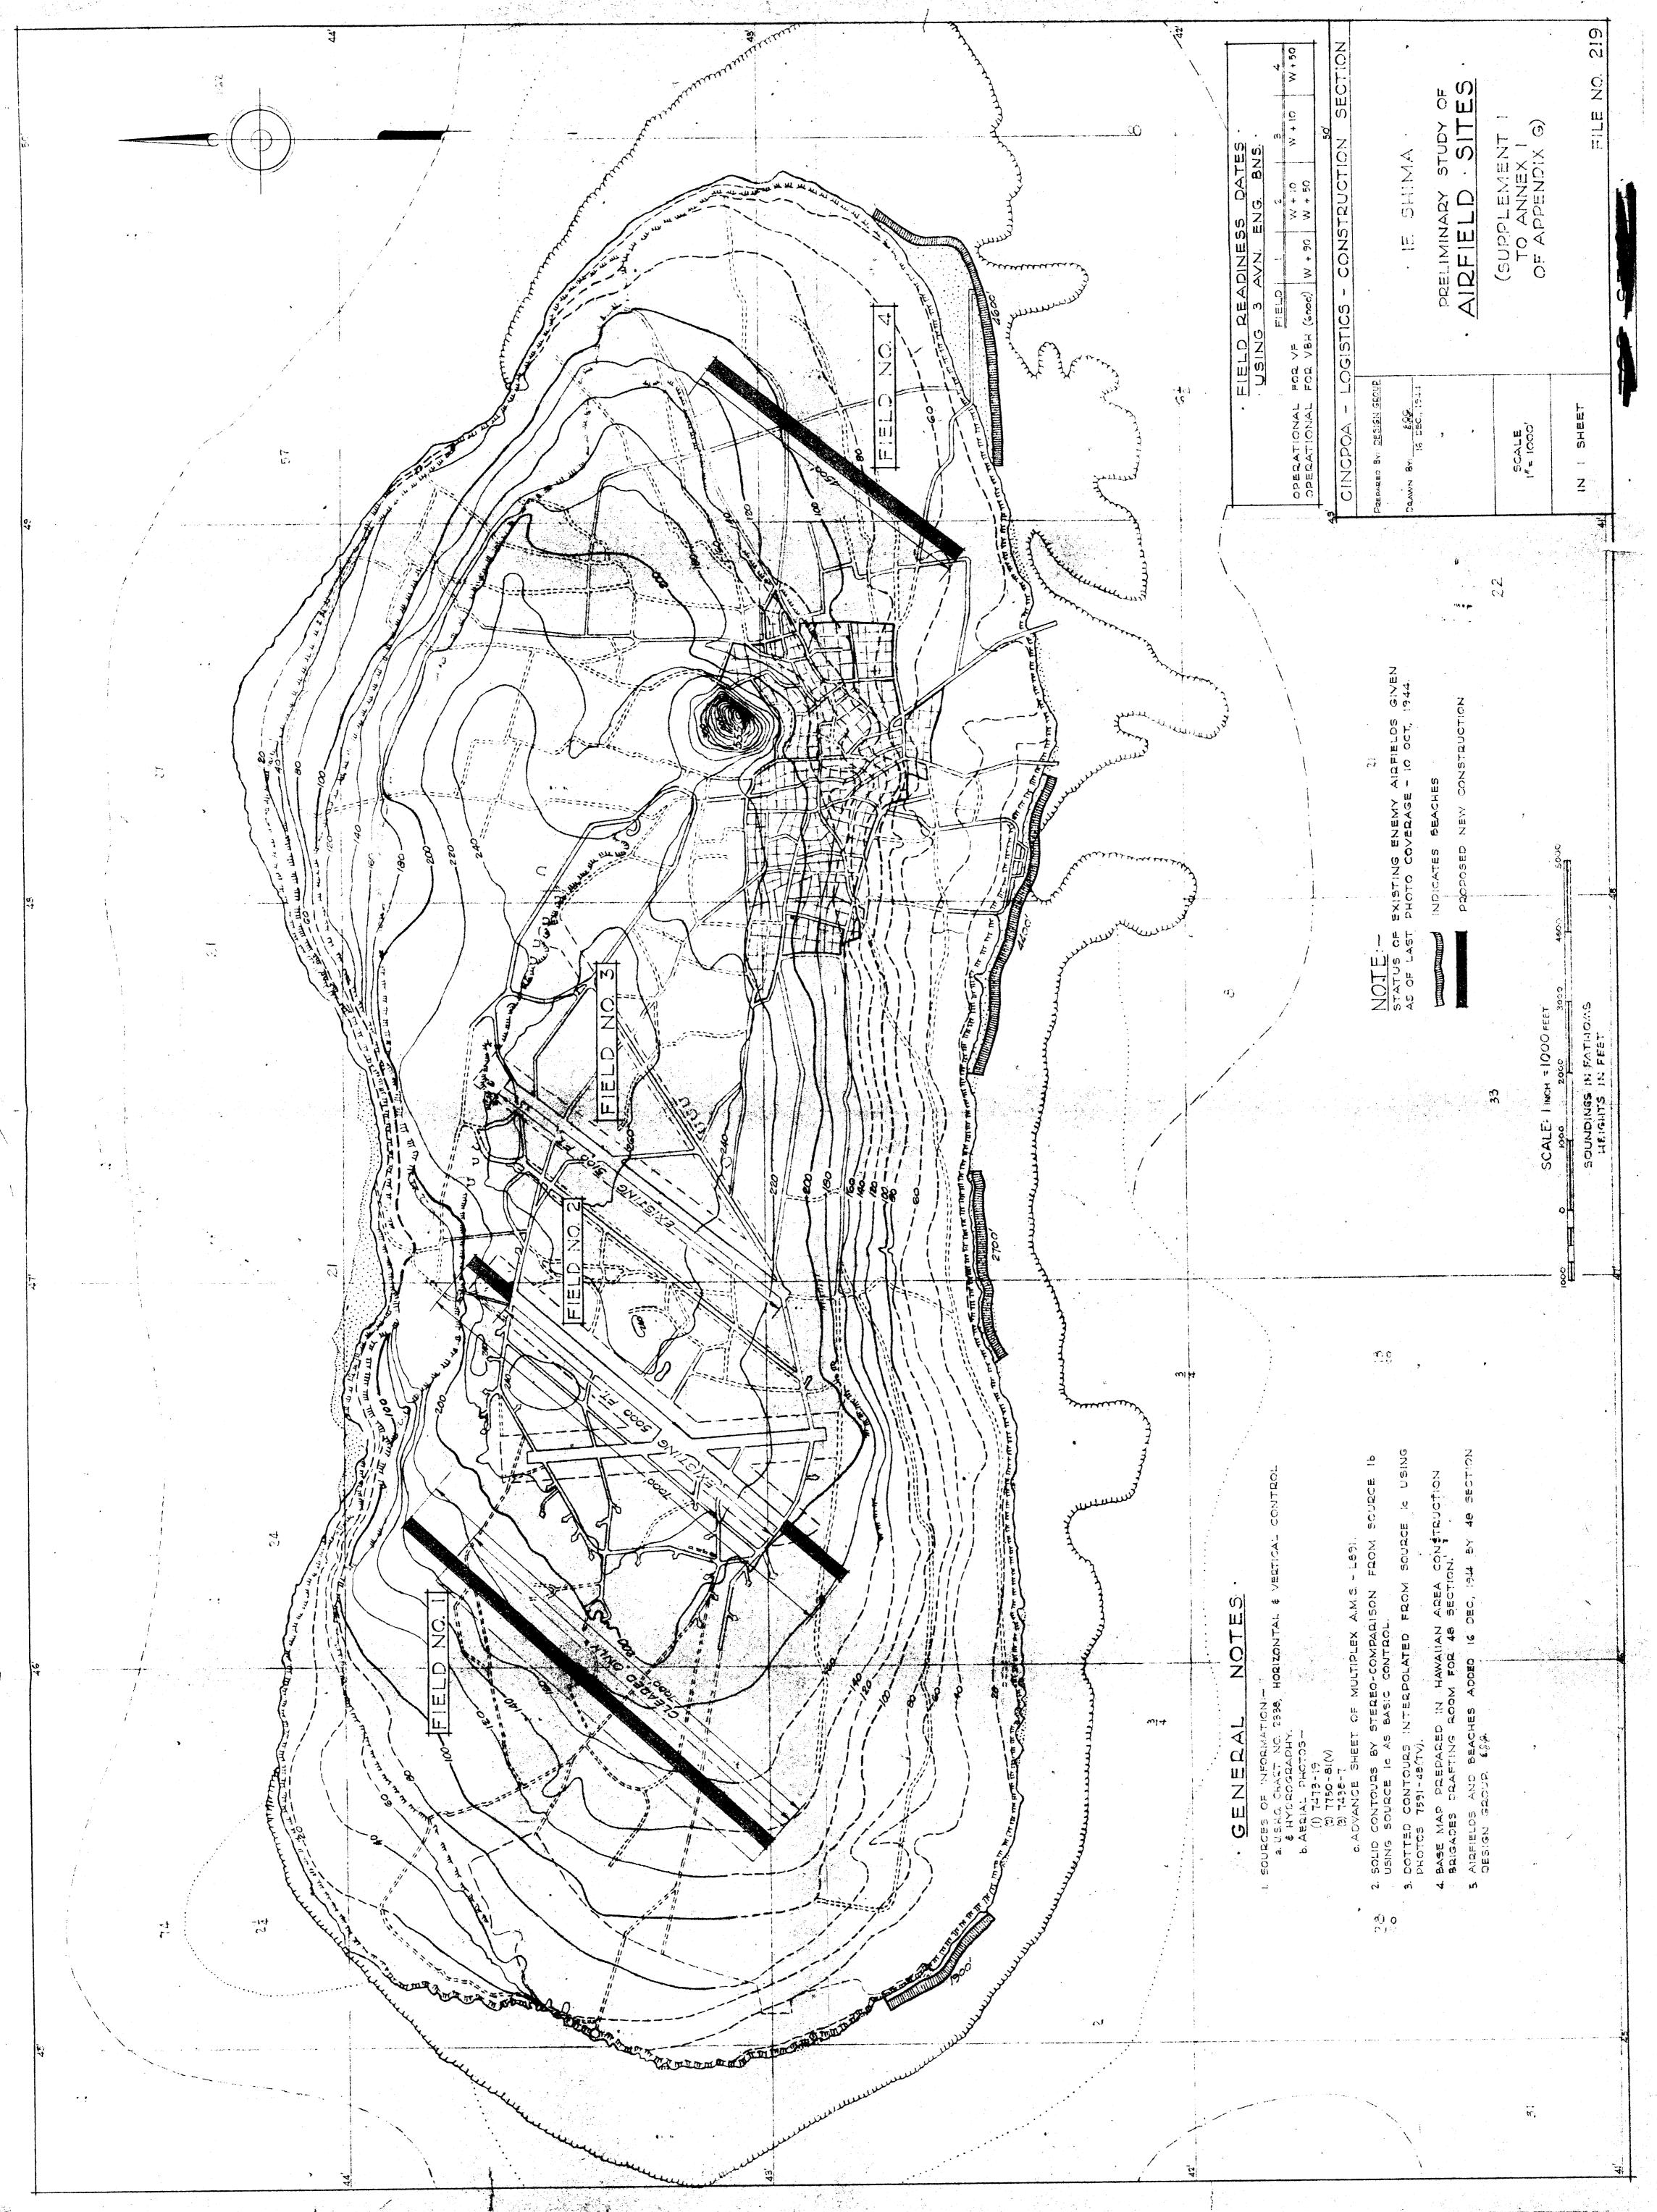

During the assault phase Military Government functions in IE SHIMA will be performed by the Military Government detachments, including medical, which are regularly assigned to the assault division.

### b. Garrison Phase

Upon completion of the assault phase, the Military Government. detachments assigned to the assault division will revert to the control of the garrison commander. These detachments will be augmented when practicable by one Military Government Camp Unit to be carried in garrison shipping. This unit is in addition to those previously provided for Phase I.

### 7. SERVICE TROOPS

Unless otherwise indicated in Annex 2 to Appendix G - Phase II, all service units will be in addition to those listed for Phase I.

ICEBERG

APPENDIX H

PHASE III

SEIZURE AND DEVELOPMENT OF ADDITIONAL POSITIONS

#### 1. GENERAL

#### a. Objectives

Phase III will comprise the capture of additional islands in order to extend our air bombardment and blockade of JAPAN. Although reconnaissance is incomplete it appears that the only islands in the RYUKYUS susceptible of extensive development are MYAKO and KIKAI. MIYAKO will be captured and developed primarily as a base for VIR aircraft. KIKAI, after capture, will be developed as an advanced base for fighters. It is expected that lack of forces, particularly Army service troops, will preclude the seizure of either of these objectives until such time as additional service units become available in the Pacific Ocean Areas.

Assuming that the necessary service troops are available, the operations comprising Phase III may conform to the following approximate time schedule, L Day being the day of initial landing on OKINAWA:

MIYAKO A Day

L plus 90

KIKAI

F Day

L plus 120 🐼

MIYAKO is to be captured first because of the greater length of time required to develop VLR bases and in order to conform as nearly as possible to the anticipated availability dates of VLR wings.

KIKAI, being close to other enemy air bases in the AMAMI
Group and a relatively short distance from JAPAN, should be captured after
MIYAKO in order to allow a longer period for attrition of Japanese air forces.

Delays in the availability of service troops beyond the dates indicated above will impose corresponding delays in the seizure of the objectives.

#### b. Ground Forces

The V Amphibious Corps (3rd, 4th, and 5th Marine Divisions) is designated as the assault force for the capture of MIYAKO. The 3rd Marine Division and the Corps troops will be mounted in the MARIANAS area, and the 4th and 5th Marine Divisions in the HAWAIIAN area. Rehearsals will take place in the mounting areas.

One infantry division (reinforced) will be designated for the capture of KIKAI from the combat troops allocated to ICEBERG. Mounting and rehearsals will take place in the OKINAWA GUNTO.

#### c. Air Forces

Preliminary bombing of MTYARO-will be accomplished by the coordinated efforts of fast carriers, the Tactical Air Force at OKINAWA, and heavy bombers from LUZON. Direct air support of the assault will be provided by escort carriers.

Preliminary bombardment and direct air support of the assault on KIKAI will be provided by the Tactical Air Force, assisted as required by elements of the Fast Carrier Task Forces

The primary function of the Fast Carrier Task Forces will be to cover the operations of Phase III by conducting continuing attacks on strategic and tactical targets on the Japanese mainland. These attacks will be coordinated with operations of the 20th Air Force and will be intensified against KYUSHU and western HONSHU during the movements of assault shipping in order to provide strategic support.

Transport carriers will transport aircraft spares, pilots, and air crews to the combat areas for replenishment of CV's, CVL's, and CVE's. In addition, they will be required to transport certain garrison aircraft units to be designated.

#### d. Naval Forces

Phase III will require assault shipping sufficient to mount three divisions, construction forces for early activation of airfields, and ground echelon and service units of initial air garrison. Three transport squadrons will be necessary to mount the V Amphibious Corps for the seizure of MIYAKO. The capture of KIKAI will be conducted as a shore-to-shore movement, using landing ships and landing craft exclusively.

In view of the reduced strength of the Japanese fleet and our strategic position in LUZON and OKINAWA, it is believed that three fast carrier task groups will be sufficient covering force for these operations.

Escort carriers will provide air cover for assault shipping during the movement to MIYAKO and close air support during the landing operations. Three close air support units or a total of twelve CVE's will be required. Shore based aviation should be capable of providing adequate close air support for the capture of KIKAI and the employment of escort carriers is not considered necessary for this purpose.

The total fire support force will be utilized in the MIYAKO operation. This force may be reduced for the assault on KIKAI.

#### 2. MIYAKO - Phase III c. (There is no Phase III a. or III b.)

#### a. General Discussion

MIYAKO has been selected as an objective in order to acquire additional airfield sites for the following purposes:

- (1) To provide a base relatively close to JAPAN for VLR aircraft.
- (2) To provide an offensive air base to complete the neutralization of enemy positions in FORMOSA.
- (3) As a defensive southern outpost to provide greater security for our position in OKINAWA.

The capture, occupation, defense, and development of MIYAKO will be initiated as soon as the necessary service troops become available and the necessary assault shipping and combat units can be released from other

CONTRACTOR OF THE PARTY OF THE

operations.

Maximum naval covering and fire support forces available will be employed

During the assault phase the Commander Expeditionary Force will be responsible for initiating the development of MIYAKO. Upon completion of the assault phase the Commanding General, Tenth Army, will be responsible for the shore defenses, administration, and logistic support of the island.

#### b. Ground Forces

The estimated strength of the Japanese forces on MTYAKO is one infantry division (less one RCT) and two independent mixed brigades with supporting and service troops, totalling 20,000 - 22,000. The 1940 civil population was 60,786. A corps of three reinforced divisions is considered a suitable assault force. One division, to be provided from the assault force until a relief division is available, will be required for the defense of the island. Assault and garrison forces are listed in Annex 1 to this Appendix.

The coast of MIYAKO is nearly everywhere precipitous. The most extensive beaches border the peninsulas forming JUNK BAY. Though these beaches are backed by relatively low, rough, wooded escarpments, access inland is probably less obstructed than from any other beaches. The small islands of YERABU, SHIMOJI, and KURUMA which lie from 1-1/2 to 4-1/2 miles off JUNK BAY afford possible positions for emplacement of artillery to support the landing forces. The three existing enemy airfields are grouped on an arc about JUNK BAY, at a distance of from 1 to 2 miles therefrom. The scheme of maneuver will provide for the seizure of the three small off-lying islands en A-1 day, and the emplacement of artillery to support the main landings on A Day. Two divisions in the assault will land in JUNK BAY area in order to seize the three existing airfields. The attack will then be continued to capture the remainder of the island. A third division will be held initially in floating reserve.

SOM CHONES.

#### c. Air Forces

Prior to our attack MTYAKO will have been subjected to repeated air attacks by both shore-based and carrier aviation in order to neutralize its air bases as a safeguard for our position in OKINAWA. About A-15 an intensive air attack will be initiated to destroy defensive installations. The Fast Carrier Task Groups may assist in the preliminary bombardment of the target but will cover the operation by conducting strikes against strategic and tactical targets in KYUSHU and HONSHU. The Southwest Pacific Area air forces will be requested to assist in this operation by the neutralization of airfields in FORMOSA and by extensive heavy bomber attacks on MIYAKO. Direct air support of the assault and neutralization of adjacent supporting bases will be provided by escort carriers.

Four airfields will be constructed to accommodate two wings (8 groups) of very long range bombers, two fighter groups, one night fighter squadron, one Marine torpedo bomber squadron for anti-submarine patrol.

Air forces are listed in Annex 1 to this appendix.

#### d. Naval Forces

Three transport squadrons will be provided from new construction to mount the V Amphibious Corps for this operation. Two transport squadrons will assemble in HAWAII on A-46 to mount the 4th and 5th MarDivs; and one transport squadron in the MARIANAS on A-36 to mount the 3rd Mar Div.

All available fire support units will be required in order to effect maximum destruction of enemy defenses prior to the assault. The fire support units will be assembled in OKINAWA and will precede the assault force to the objective by at least five days. The minesweeping group should depart OKINAWA with the fire support group.

Naval forces are listed in Annex 1 to this appendix.

#### JOB STORY

PART IT

#### 3. KIKAI - Phase III d.

#### a. General Discussion

The second objective for Phase III is KIKAI. This objective is selected in order to acquire additional airfield sites for the following purposes:

To operate fighters for escort, and for air defense to the north of OKINAWA.

To neutralize other bases in the AMAMI Group.

The seizure of this objective will be conducted as a shore-to-shore movement using amphibious craft and employing assault forces released from active operations in the OKINAWA area. Naval covering and fire support forces will be retained as required from the MIYAKO operation to support the assault on KIKAI.

#### b. Ground Forces

The estimated strength of the Japanese forces in the AMAMI Group is one division, one independent mixed brigade, and one independent mixed regiment with supporting and service troops, totaling 21,700 - 23,700. Of this total it is estimated that 3,500 are on KIKAI. The 1940 civil population was 18, 184. In view of the enemy combat strength in the AMAMI Group, and his capability of quickly reinforcing KIKAI, it is estimated that one reinforced infantry division should constitute the assault force. One infantry division will be required for the defense of the island. Assault and garrison forces are listed in Annex 1 to this appendix.

The only potential landing beaches are at SOMACHI HAKUCHI and at SHITOOKE on the northeast coast, and at WAN and AGARE on the south-west coast. Weather permitting, the northeast coast is considered the better landing area. The scheme of maneuver will provide for landings on the northeast coast, or alternately, at WAN and AGARE in the event of unfavorable weather conditions on the northeast coast.

TOP SPORT

#### c. Air Forces

Air operations against KIKAI will be continuous after our establishment in OKINAWA, in order to maintain its neutralization. When the neutralization of MIYAKO and the SAKASHIMA Group is taken over by the escort carrier force, the entire offensive effort of the Tactical Air Force will be available for employment against KIKAI. KIKAI will be kept under continuous attack to destroy its defensive installations as well as to neutralize its airfields.

The proximity of KIKAI to KYUSHU makes it inadvisable to expose CVE's to attack from that major air center unless previous operations of the Fast Carrier Task Forces and the shore based aviation has resulted in an appreciable decline of Japanese offensive air capabilities. The short distance of 155 miles from OKINAWA to KIKAI will enable shore based air forces to provide convoy cover, direct air support, and combat air patrol over our forces at the objective. To augment the available shore based air strength during this period, units of the Strategic Air Force will be attached to the Tactical Air Force as required.

Subsequent to our landing and until local air defenses are established, air defense will have to be provided by combat air patrols from OKINAWA and continuous attacks on enemy air bases in KYUSHU by both shore and carrier based aviation.

KIKAI will be developed to provide a base for four fighter groups, two night fighter squadrons, and one Marine torpedo bomber squadron. Air forces are listed in Annex 1 to this appendix.

#### d. Naval Forces

The assault shipping for Phase III-d will consist exclusively of landing ships and landing craft, which have been retained from the MIYAKO assault. It is expected that these will be assembled in OKINAWA where the assault force will be mounted.

#### CONTRACTOR OF STREET

The fire support force will consist of 6 OBB, 3 CA, 3 CL, 18 DD, 9 LCI(G), and 9 LCI(M) from the force used in the MIYAKO assault.

The same covering force employed in Phase III-c will be used to support the operations against KIKAI.

Close air support will be provided by shore based aircraft from OKINAWA; therefore, no close naval air support units will be necessary.

Naval forces are listed in Annex 1 to this appendix.

Ass't Flag Secretary

#### 1. GENERAL

In addition to the logistic measures discussed in Appendix E to Phase I and Annex I to Appendix G, Phase II, the following factors applicable to Phase III are significant.

#### 2. OPERATIONAL REQUIREMENTS

The concept of operations requires:

- a. on OKINO DAITO JIMA the early availability and installation of equipment and personnel for a LORAN station.
- b. On KUME SHIMA, MIYAKO JIMA and KTKAI J'IMA rapid construction of additional airdrome facilities.

#### 3. FACTS AFFECTING LOGISTICS

a. Distances of the objectives from points shown are as follows, in nautical miles:

	<u>OK INO</u>	KUME	<u>MIYAKO</u>	KIKAI
OKINAWA (NAHA)	207	48	170	248
IWO JIMA	567	835	880	655
GUAM	1015	1277	1287	1215
SAIPAN	996	1265	1300	1190
ULITHI	990	1221	1200	1235
MANUS	1814	2061	1998	2075
LEYTE	900	945	845	1110
FORMOSA	546	296	209	515
KYUSHU	415	375	474	175
SHANGHAI	677	413	439	485

Supplement 1 to this Annex shows the relative position and size of the four objectives.

#### b. PHYSICAL SURVEY

(1) OKINO DAITO SHIMA (see Supplement 2 to Annex 2 of Appendix H) is roughly triangular, approximately 5000 feet in its greatest

MONADEGE EN

dimension, and contains .45 square miles or 290 acres. It is a flattopped coral formation bounded by steep rocky cliffs sloping 80 feet
to the sea. Phosphate deposits are being exploited at the northwest
end of the island and there is evidence of cane cultivation. No
high standard roads have been built but a narrow gauge railroad links
the northern phosphate diggings with the western coast. The barracks
of the phosphate workers are the only settlement; population in 1938
was 2.000.

- (2) KUME SHIMA (see Supplement 3 to Annex 2 of Appendix H) is about eight miles long, contains 21 square miles, and is largely undeveloped. Its topography varies from small coastal plains to sand dunes, terraces and hills, some of which rise to 1,000 feet. Agriculture is the only significant industry. A 9-foot road circles the island, generally following the coast, and a number of minor roads cross the interior, but there are no railroads. Of several settlements GIMA, on the southwest coast, is the largest. The Island's population in 1940 was 13,400.
- (3) MIYAKO JIMA (see Supplement 4 to Annex 2 of Appendix H) is a triangular island twenty miles on its longest, the northeast, coast and 65 square miles in area. Most of it is low and flat, but there are six roughly parallel ridges, 300 to 400 feet in elevation, with steep eastern and gentle western slopes. No sizeable industry other than agriculture is reported. Roads of 9 feet or greater width follow the western shore and link it with the southern and eastern parts of the island. There is no evidence of a railroad. Of numerous scattered settlements HIRARA on the west coast is the largest, having nearly half of the Island's total 1940 population of 60,000.
- (4) KIKAI SHIMA (see Supplement 5 to Annex 2 of Appendix H) is eight miles long, three miles in its greatest width, and has an area of 22 square miles. A number of plateaus slope gently to the north and east to an elevation of nearly 700 feet. Sand dunes occur in the western end. There is no industry of importance. A minor perimeter

Per Spend

road circles the island and a main road connects the two principal towns, SOMACHI on the east and WAN on the west. The Island has no railroad. Villages are scattered throughout the area and the population in 1940 was 18,000.

#### c. WATER SUPPLY

- (1) OKINO DAITO JIMA. The best information available indicates the present water supply is dependent on catchments and shallow wells. Distillation units will therefore be needed in the early phases of eccupation and wells driven to sea level in the center of the island will be the best source in the garrison phase.
- (2) KUME SHIMA, like OKINO DAITO JIMA, apparently depends on catchments and wells for water supply. Distillation units and deeper wells will be required as at OKINO.
- (3) MIYAKO JIMA has little or no surface water, but it is reported that deep wells will produce a large quantity of potable water. The enemy installations to supply his airfield development may be salvageable, but distilling units must be planned.
- (4) KIKAI SHIMA's existing water installations are inadequate for our needs, practically all surface water being lost in permeable rock. Inland wells driven approximately to sea level and/or distillers will be required.

#### d. HARBORS

- (1) OKINO DAITO SHIMA is surrounded by a narrow reef and has no protected inlet or anchorage. Small ships now approach the southwest side of the Island, making use of mooring buoys near a crane-equipped pier.
- (2) KUME SHIMA has a useable harbor in SHIMAJIRI WAN, formed by coral reefs enclosing a large lagoon southeast of the Island. The anchorage has 15-20 fathoms and is well sheltered from all directions except southeast. Any size ship could enter, there being anchorage area for 4 cruisers and several destroyers, but local knowledge of the entrance shoals and of numerous dangers within the bay would be essential for further utilization. A channel breaks the reef at GIMA to afford

THE THEFT

access to an anchorage suitable for small craft. Tidal currents crossing the entrance, however, reach strengths of  $3\frac{1}{2}$  knots.

- (3) MIYAKO JIMA is surrounded by a coral reef. Northwest of the island this formation protects MIYAKO HAKUCHI, an anchorage sufficient for several capital ships plus attendant cruisers and destroyers, sheltered from all but northwest winds. Numerous detached patches of coral, some invisible, are present, but dangers from currents are negligible. To the south of MIYAKO HAKUCHI, near the town of HIRARA, are two smaller, deep water anchorages more sheltered but with narrow entrances. The port of HIR/RA is approached by waters too shallow, however, for any vessels other than small craft. JUNK BAY, south of HIRARA, is too shallow for use as an anchorage but will accommodate small landing craft. A secondary anchorage is possible on the east coast, north of YASHIKUBARA. Although small and exposed to northwest winds protection is otherwise adequate and water depth is sufficient for any vessel. A small bay east of KURUMA JIMA has possibilities of ten 600 yard berths in 10 to 20 fathoms of water. This site is only one mile from an existing airfield.
- (4) KIKAI JIMA's best harbor, SOMACHI HAKUCHI, a double inlet at the town of SOMACHI, is small and open to winds between east and southeast, but appears to be suitable for LSTs and like vessels. WAN MINATO, on the southwest coast, almost dries and is available only to very light craft. The waterfront at ONOTSU appears in photographs to be of rough volcanic rock, but a small pier there may be salvageable. A number of minor indentations afford passage through the reef for small boats only.

#### e. BEACH CAPACITIES

(1) OKINO DAITO JIMA has no beaches, the only practicable landing point being the phosphate pier and the adjoining seawall. This pier and the small crane mounted thereon may survive the assault to be of use in increasing the discharge capacity, but an estimate of 500 M/T per day, adequate for expected needs, is all that is warranted by intelli-

Time was a second

gence information now available.

(2) KUME SHIMA has no known cargo handling facilities and all initial discharge will have to be made over the beaches. GIMA KO is satisfactory for small craft and there is nearly 6,000 feet of shallow water approaches or sandy beaches in this area. Because of limitations of exit from these beaches, tide conditions and relative exposure, however, estimates of the capacity are below those experienced in previous operations and vary widely. 500 M/T per day is a conservative figure subject to revision in view of later photographic coverage of the area.

SHIMAJIRI WAN offers greater capacity, at least 1700 M/T per day. Possible landing sites along the southeast coast of the island total 6,600 feet of shallow water approach or sandy beach. Because of the same limitations mentioned above for GIMA KO, however, the capacity estimate is conservative and subject to revision by later intelligence data. 2,200 M/T per day is insufficient for all anticipated needs, but by landing the prescribed build-up supplies on OKINAWA and by transshipment KUME's beach capacity becomes more nearly adequate.

(3) MIYAKO JIMA also is without any known cargo handling facilities, but in view of the enemy's airfield development it is probable that some improvements have been made. Considerable anchorage area is available favorably located off the best beaches, those on the western coast. These may be used during any of the usual weather but use of more exposed beaches on the southern and eastern coasts simultaneously will be rarely if ever practicable. Capacities are conservatively estimated as follows:

East Coast 1700 M/T per day, or

South Coast 1700 M/T per day.

West Coast 5100 M/T per day.

Total 6800 M/T per day.

This total is sufficient to handle tonnages planned for discharge.

(4) KIKAI JIMA's beach capacity appears to be far below anticipated requirements. Further intelligence may permit upward revision, but

Tetal

current estimates are 500 M/T per day at SOMACHI HAKUCHI and an additional 500 for all of the island's other practicable landings. Limitations arising from off-shore conditions, lack of inlets and steep shores indicate little possibility of developing much greater capacity. Unless later photo coverage shows more favorable beaches the seizure and development of KIKAI SHIMA as proposed will be logistically feasible only by extensive use of exposed anchorages, small boats, cargo planes or gliders, parachute drops, or other relatively inefficient support methods of this nature.

#### 4. TROOP AND TOUNAGE REQUIREMENTS

a. In setting up the troop lift and tonnage requirements, the following assumptions are made:

(1)	ESTIMATED TONNAGE LIFT PER MAN	,	Orig. Equip. Initial Maint. & Const. Material		
		Total Lift	Initial <u>Lift</u>	Later <u>Echelon</u>	
	Tactical Troops - withdrawn	3 MT	3 MT	∘ ⊚	
	Tactical Troops - Remaining as part of garrison	5 MT	3 MT	2 MT	
	Garrison Troops - loaded with assault Forces	lo MT	3 MT	7 MT	
	Other Garrison Troops	10 MT	5 (Minimum	) 5 MT	

#### (2) LOADING CAPACITIES WITHOUT STOWAGE

AP's - 1500 Personnel and 200 MT

AK's - 6500 MT for vessels scheduled to arrive during combat period (assumed 1st month), and 9000 MT for remainder.

5.

#### a. AIRFIELD DEVELOPMENT

CONTEMPLATED DEVELOPMENT

- (1) OKINO DAITO JIMA is too small for even a fighter strip in the prevailing wind direction and none is planned.
- (2) KUME SHIMA has only one area suitable for dispersed airfields, the western tip of the island. Information is fragmentary but indicates that only two parallel fighter strips about 4500 feet long and 1000 feet apart can be accommodated, as shown on Supplement 3 to this Annex. Coral is available for surfacing. Solid rock and the topography appear to render the amount of grading to construct bomber fields prohibitive. If subsequent photo coverage confirms the unavailability of a VLR airfield site selection of another objective for this purpose is to be expected. For planning purposes logistic support of the alternate objective may be assumed to be the equivalent of that for KUME.
- (3) MIYAKO JIMA has been described as "ideal" for airfields. Its flat surface appears to offer 6 or 7 possible sites for 7,000 foot fields. On 10 October 1944 three fields existed with a total of six runways, four having lengths of 4,000 to 5,500 feet. Both approach conditions and grading possibilities are favorable to further construction. As shown in Supplement 4 to this Annex development is contemplated as follows:

Four 7,000 foot strips, one per VLR Group, arranged in pairs.

Two fighter fields totalling three 5,000 foot strips, one field per Fighter Group plus one VF(N) or VMTB squadron.

Further intelligence may later dictate another arrangement but the above is considered a conservative estimate of the island's potentialities.

(4) KIKAI JIMA is known to have one existing airfield, approximately 4500 feet long, situated near WAN. As shown on Supplement 5 to Annex 2 of Appendix H the island's coastal plains offer the best additional sites and four fighter fields are contemplated. The terrain is

700

satisfactory and coral is readily obtainable for surfacing. Cross-drainage from inland slopes, particularly on the eastern coast sites, is expected to be the greatest problem. Several small villages will have to be removed complicating somewhat the care of civilians.

#### b. NAVAL FACILITIES

- (1) At OKINO DAITO JIMA no naval facilities other than a GROPAC and a LORAN station are planned. Detailed composition of the GROPAC, to have 192 personnel, is given in Supplement 1 to Annex 3 of Appendix H; its principal components are Administration, Boat Pool, Surface Radar and Boat Repair units.
- (2) KUME SHIMA's anchorage, SHIMAJIRI WAN, although relatively small warrants development and support. The components of this development, principally a standard GROPAC, a Boat Pool, a Harbor Entrance Control Post and allied harbor protection units are listed in Supplement 2 to Annex 2 of Appendix H. The aggregate personnel complement of the Naval Base will be 704.
- (3) MIYAKO JIMA also has an anchorage worthy of development, and installation of an 848-man naval base consisting of forty-two components plus a 600-man boat pool is contemplated. The forty-two components, largest of which are the Port Director, Supply and Dispensary units, are listed in Supplement 3 to Annex 3 of Appendix H.
- (4) KIKAI SHIMA will be the site of a GROPAC, to serve the small harbor at SOMACHI, and two PT Operating Bases. Twenty-six components, listed in Supplement 4 to Annex 3 of Appendix H, make up the 459-man GROPAC.

  Use of a 300-man Boat Pool is also contemplated.

#### c. HARBOR DEVELOPMENT AND WATERFRONT FACILITIES

(1) OKINO DAITO JIMA. Reconstruction of the phosphate loading pier and moorings will probably require augmentation by some device such as shore ramps and the use of LSTs to supply this island adequately. Lack of protected waters renders the use of pontoon piers doubtful.

DOD GOODD

No nets or underwater detection devices are considered necessary if the contemplated surface search radar can be augmented by anti-submarine craft. A GROPAC will provide essential waterfront services.

(2) KUME SHIMA. Although the initial assault on this Island will utilize GIMA KO, the limited potentialities of this harbor warrant only minor development as compared to SHIMAJIRI WAN to the southeast. A very narrow embayment in the coral of GIMA KO affords deep water as far as HANA SAKI, but the construction of wharves would be required to accommodate efficiently any but light craft. For use of GIMA KO as only a light craft anchorage no fixed underwater detection gear is contemplated. A slip mooring for a patrol vessel, however, will be required off the harbor entrance so that the patrol craft may use its detection gear free of engine noises while retaining a good position for interception.

SHIMAJIRI WAN is better suited for large ship discharge and is considered adequate for the island's needs. Should any major installation be added to the two fighter strips, however, clearing of the numerous coral heads in the bay will be necessary. For harbor protection the following is contemplated:

Torpedo net from TOKUSHIMA BISE to HANAREGAA BISE, with tug operated gate.

Sonobuoys on an arc 2 miles distant from the entrance, later supplemented by a herald southeast of HANAREGAA BISE.

A Harbor Entrance Control Post with underwater detection station and surface search radar on SHIMAJIRI SAKI.

These positions are shown on Supplement 3 to Annex 2 of Appendix H.

Waterfront facilities will be provided by a GROPAC. Pontoon piers will be installed for discharge of small craft but wharfage for AK type vessels does not appear feasible.

(3) MIYAKO JIMA. Development of MIYAKO HAKUCHI into an anchorage affording the equivalent of 32 berths of 600 yards each is contemplated.

Off-shore installations, shown in Supplement 4 to Annex 2 of Appendix H, will include:

Torpedo nets and underwater detection devices, including sonobuoys and eventually hydrophones.

A Harbor Entrance Control Post located on YERABU JIMA or IKEMA JIMA.

h surface search radar at the above post.

Picket boats sufficient to maintain constant patrol in the narrow passages and shallow water south of the anchorage.

Larger craft (83 ft. type) to patrol the northern anchorage approaches.

Mooring buoys in the small anchorage area between HIRARA and SHIMO ZAKI.

Channel buoys and channel entrance range.

Shore facilities to serve the harbor will be included in a CUB at HIRARA, and the installation of pontoon piers there is contemplated.

Additional possibilities, awaiting confirmation by later intelligence data, include a tanker mooring in the bay east of HIRARA and a secondary anchorage for about ten ships east of KURUMA JIMA. Should weather conditions prove favorable these bays, although relatively exposed, will be enclosed by nets and utilized.

(4) KIKAI SHIMA. The harbor of SOMACHI HAKUCHI, roughly only 800 yards by 500 yards in area, is the only anchorage potentially useful. Three sets of bow and stern moorings for small vessels and six pontoon wharves will be the maximum practicable development. Use of the large roadstead anchorage outside the harbor will be necessary, requiring installation of torpedo nets arranged in baffles as shown

on Supplement 5 to Annex 2 of Appendix H. Gates for emergency exit must be incorporated in the net baffles. Considerable depths close off-shore render fixed underwater detection devices inadvisable; constant patrol by anti-submarine craft will be necessary. Harbor service facilities ashore will be provided by a GROPAC at SOMACHI.

## 6. MEDICAL FACILITIES AND EVACUATION POLICY

## a. ESTIMATE OF CASUALTIES

Type of Casualty	OKINO	KUME	MIYAKO	<u>KIKAI</u>
Dead and Missing	160	800	2400	1000
Local Hospitalization	150	800	2400	500
Requiring Evacuation	490	2400	7200	3500
Totals	800	4000	12000	5000

### b. EVACUATION

(1) Casualties from OKINO will be evacuated directly to the MARIANAS, by surface only. An AH or APH will be provided for emergencies and evacuation. From all other objectives evacuation by surface is contemplated and by air when airfields are available, to the MARIANAS and OKINAWA. MIYAKO casualties will also be sent to the PHILIPPINES upon advance arrangement by Cincpoa with CinCSWPA. Bed credits required:

	<u>OK INAWA</u>	MARIANAS · ·	PHILIPPINES
OKINO	. <b>-</b>	490	-
KUME	1000*	1400	-
MIYAKO	500 <del>*</del>	2000	4500
KIKAI	1000	2500	
Totals	2500	<b>639</b> 0	4500

^{* (}Staging, enroute MARIANAS or PHILIPPINES).

## (2) Surface ships required:

<u>Objective</u>	No. and Type Ship	Total Capacity
OKINO	1 AH or APH	500
KUME	2 AH 24 LST or 10 APA	1000 1400
MIYAKO	4 AH* 3 APH 8 APA	4000 2100 1100
KIKAI	2 AH 3 APH 3 APA or 7 LST	1000 2100 400

^{* 2} Trips.

## c. HOSPITALIZATION

In the assault phase at all objectives medical units of the assault force will provide hospitalization. Garrison hospitalization requirements will be as follows:

OKINO	150 beds.
KUME	1025 beds.
MIYAKO	3050 beds.
KIKVI*	1850 beds.

^{*} With a 15-day evacuation policy.

## d. CARE OF CIVILIANS

Objective	Estimated <u>Casualties</u>	Medical Service by
OKINO	150	Med. Units of Assault Force.
KUME	1300	Mil. Govt. Units - 100 beds.
MIYAKO	6000	Mil. Govt. Units - 600 beds.
KIKAI	1800	Mil. Govt. Units - 150 beds.

## 7. LOGISTIC SUPPORT FOR THE FLEET

In addition to the harbors to be utilized in Phases I and II, OKINAWA (NEKAGUSUKU WAN) will be available during Phase III for the services of fleet oilers, ammunition ships, supply ships and barges, and limited ship repair facilities. Ship repair facilities and emergency logistic replenishment will be available at MANUS and to a lesser extent at LEYTE, subject to arrangement by Cincpoa with CinCSWPA. Fleet fuel consumption is estimated as follows:

L / 30 to L /	60	4,200,000	bbls.
L / 60 to L /	90	4,200,000	bbls.
L / 90 to L -	120	5,100,000	bbls.

In the event the British Pacific Fleet takes part in this operation fuel requirements will be increased by approximately 700,000 barrels for each of the above periods. All other aspects of logistic support for the Fleet for Phases I and II apply equally to Phase III.

## 8. LOGISTIC SUPPORT OF LAND BASED FORCES

## a. RESPONSIBILITY FOR SUPPLY

Forces in Phase III, mounted from areas other than OKINAWA, will be furnished initial supplies by Commanders responsible for furnishing such supplies to forces of Phase I. Forces mounting from OKINAWA will be furnished initial supplies by ComGenTENTHArmy within total cuantities of supplies made available by Cincpoa.

Commanders responsible for providing supplies subsequent to initial mounting for Phase I will be similarly responsible for resupply of Phase III forces.

### b. SUPPLIES TO ACCOMPANY TROOPS

For the forces in Phase III mounting from points other than OKINAWA the same levels of initial supplies as prescribed for Phase I (page 46, paragraph 7 b., Appendix E) will be required. Supplies to accompany forces mounting from OKINAWA will be determined and provided by ComGenTENTH Army from total cuantities of supplies made available to him by Cincpoa for all phases of the ICEBERG operation.

SUPPLY LEVELS TO BE ESTABLISHED AND MAINTAINED AT THE OBJECTIVE

Supply levels for Phase III will be as prescribed for Phase I.

ComGenTENTH Army is authorized to distribute stocks among various islands to maintain the prescribed total and stock level.

## d. RESERVE SUPPLIES

Since Phase III forces are largely redeployed from Phase I, the reserve levels and supplies (except Class III) established for Phase I will continue through Phase III.

## Class III Reserves

(1) All products (less Avgas), drummed:

One ship will be loaded on West Coast with 30 days of Class III (less Avgas) supplies in drums as follows: (Approximately 30 days supply for 50,000 troops)(12 days approximately for all garrisons at all 4 targets).

Mogas	17,000 Drums	Greases in Founds
White Gas	4,000 "	2-107 17,500
Diesel	8,500 "	2-108 6,250

Kerosene	350 Drums	2-109	2,000
Avlube 1120	300 "	2-110	1,250
SAE 10 lube oil	50 "	Gear Lube	
SAE 30 lube oil	850 "	SAE 90	47,650
SAE 50 lube oil	150 "		

This ship to arrive at OKINAWA by L  $\neq$  70 and to be held in reserve for Phase III on call of Commanding General 10th Army. If these supplies are not used sooner, they will be discharged at OKINAWA by L  $\neq$  120 and constitute drummed reserves.

## (2) Aveas and related Avlube, drummed:

Two shiploads (60,000 drums Avgas, 2000 Avlube) as provided for in Annex D to Cincpac-Cincpoa Operation Plan 14-44 (para. 5(d) 1, page 11), if not used in Phases I and II, or portions thereof not used, will be available to ComGenlOthArmy on call.

## (3) All products, bulk:

No AOGs in addition to those provided for Phases I and II are considered necessary for Phase III. However, ComServPac will have four additional YOGLs (all non self-propelled) available to ComGenlOthArmy upon prior arrangement with ComServPac.

To reduce handling of drums to a minimum, ACGs are to be at targets, and installation of flexible pipelines, submarine lines and temporary bulk storage ashore near landing beaches, is to be commenced in initial assault, or as soon after assault as possible.

## e. METHOD OF SUPPLY

## (1) OKINC.

Essential maintenance sup lies for 30 days of all classes (except Class III which will be 15 days and Class V) for all elements of the expeditionary troops employed in Phase IIIa will be provided by Com-GenlOthArmy on call of Commander Expeditionary Troops Phase IIIa and will constitute the first resupply shipment. These supplies will be loaded on the WEST COAST, will sail at such time as to arrive ENIWETOK by T-15 (L  $\neq$  45) and will be loaded for optional discharge in one ship also carrying Phase I and/or Phase II maintenance supplies, to sail with one of the regular OKINAWA maintenance shipments. It will be

CAN THE TANK

held at ENIWETOK for forward movement on call of ComGenlOthArmy.

Subsequently, ComGenlOthArmy will be responsible for the resupply of the landing and garrison forces, utilizing stocks and vessels available locally to him. The regular OKINAWA maintenance shipments will include supplies necessary for the support of the OKINO Forces. No bulk storage of Mogas and Diesel is considered necessary for this island; all units stationed there will be supplied with Class III products (less Aviation) in drums, trans-shipped from OKINAWA, with special consideration to operative requirements of LORAN equipment.

## (2) KUNI JINA.

Essential maintenance supplies for 30 days of all classes (except Class III which will be 15 days, and Class V) for all clements of the landing and garrison forces scheduled to be at the objective by  $K \neq 35$  (L  $\neq$  105) will be loaded on the WEST COAST and will sail at such times so as to arrive at ENIWETOK at K - 15 (L  $\neq$  55). This shipment will sail from the WEST COAST with one of the regular OKINAWA maintenance shipments, but will be loaded in separate ships. It will be held at ENIWETOK for forward movement on call of ComGenlOthArmy and will constitute the first re-supply shipment for Phase IIIb.

The second and succeeding re-supply shipments will be scheduled to arrive at ENIWETOK at 10-day intervals commencing K - 5 (L \neq 65) and accompanying regular OKINAWA maintenance shipments. These shipments will be held at ENIWETOK for forward movement on call of ComGenlOthArmy. Supplies for the second and third re-supply shipments, loaded in separate ships, will contain 15 days' supply of all classes (except Class III Avgas and Class V) for all elements of the landing and garrison forces to be supported. Supplies for the fourth and succeeding re-supply shipments, loaded in separate ships, will contain 15 days' supply of all classes (except drummed Avgas, Mogas and Diesel; and Class V) for all elements of the landing and garrison forces to be supported. These shipments will continue until the prescribed area levels are reached; thereafter only sufficient supplies will be included to maintain these area levels.

Ten eresting

Assuming the VLR bomber field is operational by  $K \neq 75$  and a fighter field by  $K \neq 50$  Avgas requirements are estimated as follows:

 $K \neq 45 - K \neq 60$  629,000 gal. in bulk  $K \neq 61 - K \neq 90$  5,195,000 gal. in bulk

These quantities and accompanying Avlubes will be delivered by ComServPac to the OKINAWA area prior to the respective periods shown, to be discharged as directed by ComGenlOthArmy. It is anticipated a minimum of 20,000 bbls. Avgas storage will be available on this island by  $K \neq 45$ . Re-supply shipments of Avgas will be made in bulk as prescribed for Phase I.

Re-supply of Class III products other than Avgas will consist of three (3) fifteen (15) day shipments in drums. Subsequent maintenance shipments will consist of approximately 15 days supplies (less Avgas, Fogas, and Diesel) until the prescribed levels are reached. Re-supply of Mogas and Diesel after the 3rd 15 day shipment will be in bulk; it is contemplated bulk storage for these products will be operative K / 15.

## (3) FIYAKO JIMA.

Essential maintenance supplies for 30 days of all classes (except Class III which will be 15 days; and Class V) for all elements of the landing and garrison forces scheduled to be at the objective by A  $\neq$  35 (L  $\neq$  125) will be loaded on the WEST COAST and sailed at such time or times so as to arrive at ENIMETOK at A - 15 (L  $\neq$  75). This shipment

Terusacians

will sail from the WEST COAST with one of the regular OKINAWA maintenance shipments, but will be loaded in separate ships.

It will be held at ENIWETOK for forward movement on call of ComGenlOthArmy and will constitute the first re-supply shipment for Phase IIIc.

The second and succeeding re-supply shipments will be scheduled to arrive at ENIWETOK at 10-dey intervals commencing A - 5(L/85) and accompanying regular OKINAWA maintenance shipments. These shipments will be held at ENIWETOK for forward movement on call of ComGenlOthArmy. Supplies for the second and third re-supply shipments, loaded in separate ships, will contain 15 days' supply of all classes (except Class III Avgas and Class V) for all elements of the landing and garrison forces to be supported. Supplies for the fourth and succeeding re-supply shipments, loaded in separate ships, will contain 15 days' supply of all classes (except drummed Avgas, Mogas and Diesel; and Class V) for all elements of the landing and garrison forces to be supported. These shipments will continue until the prescribed area levels are reached; thereafter only sufficient supplies will be included to maintain area levels.

Assuming the four airfields to be developed on this island are activated as scheduled Avgas requirements are estimated as follows:

Of these quantities the first 25 days supply will be required in drums - 15,519 drums of Avgas and 465 drums (24,645 gals.) of Avlube. This drummed supply will be mounted with and will accompany the first Air Corps units to operate from the objective. Re-supply shipments of Avgas will be made in bulk as prescribed for Phase I.

Re-supply of Class III products other than Avgas will

consist of three (3) fifteen (15) day shipments in drums. Subsequent maintenance shipments will consist of approximately 15 days maintenance supplies (less Avgas, Mogas and Diesel), until the prescribed levels are reached. Thereafter, only sufficient supplies will be included to maintain those levels. Re-supply of Mogas and Diesel after the third 15-day shipment will be in bulk; it is contemplated bulk storage for these products will be operative by A / 15.

## (4) KIKAI JIMA.

Essential maintenance supplies for 30 days of all classes (except Class III which will be 15 days and Class V) for all elements of the landing and garrison forces scheduled to be at the objective by  $F \neq 35$  (L  $\neq 155$ ) will be loaded on the WEST COAST and sailed at such time or times so as to arrive at ENIWETOK at F - 15 (L  $\neq$  105). This shipment will sail from the WEST COAST with one of the regular OKINAWA maintenance shipments, but will be loaded in separate ships. It will be held at ENIWETOK for forward movement on call of ComGenlOthArmy, and will constitute the first re-supply shipment for Phase IIId. The second and succeeding re-supply shipments will be scheduled to arrive at ENIWETOK at 10-day intervals commencing F - 5 (L / 115) and accompanying regular OKINAWA maintenance shipments. These shipments will be held at ENIWETOK for forward movement on call of ComGenlOthArmy. Supplies for the second and third re-supply shipments, loaded in separate ships, will contain 15 days' supply of all classes (except Class III Avgas and Class V) for all elements of the landing and garrison forces to be supported. Supplies for the fourth and succeeding re-supply shipments, loaded in separate ships, will contain 15 days! supply of all classes (except drummed Avgas, Mogas and Diesel; and Class V) for all elements of the landing and garrison forces to be supported.

These shipments will continue until the prescribed area levels

Terror State

are reached; thereafter, only sufficient supplies will be included to maintain area levels.

Assuming the four airfields are activated on KIKAI JIMA as scheduled Avgas requirements are estimated as follows:

 $F \neq 35 - F \neq 60$  1,776,800 gals. in bulk

 $F \neq 61 - F \neq 90$  3,850,000 gals. in bulk

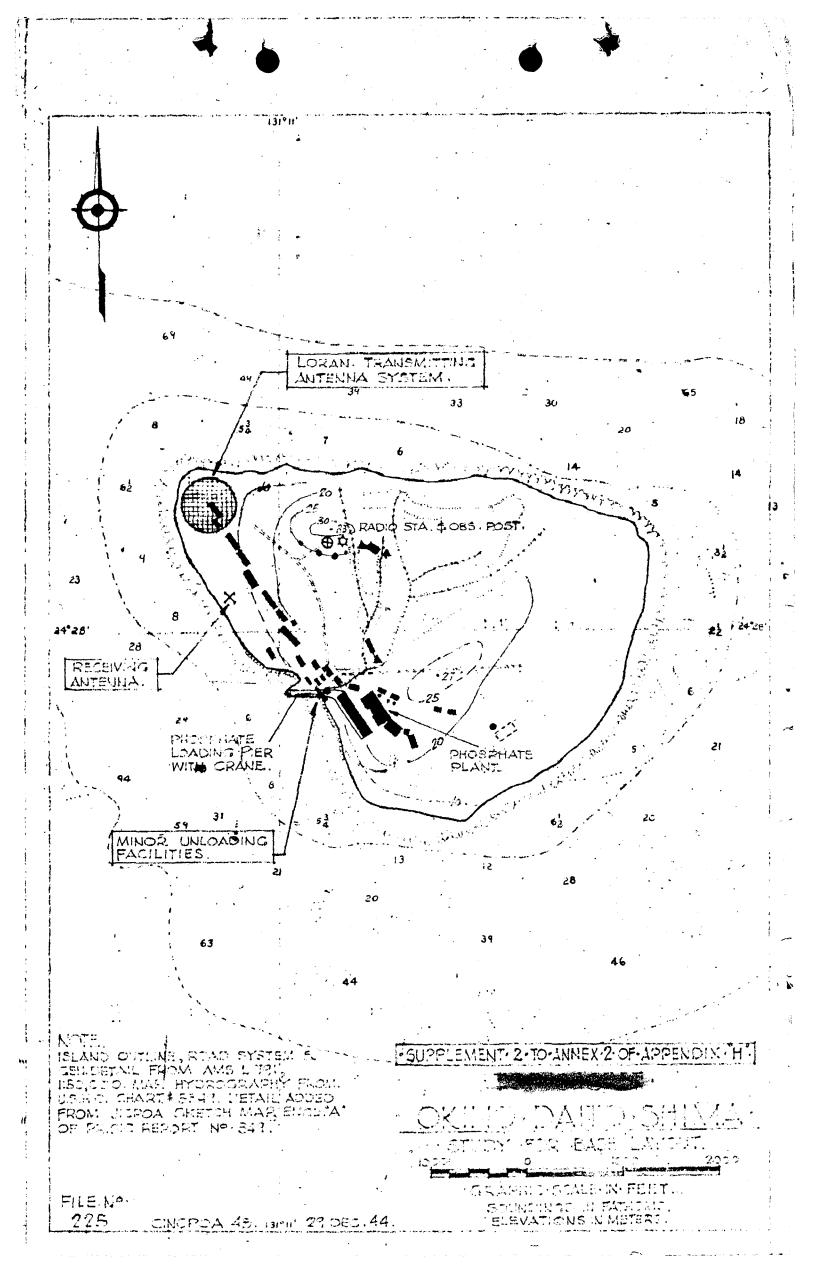

These quantities and related Avlubes will be delivered by ComServPac to the OKINAWA area prior to the respective periods shown, to be discharged as directed by ComGenlOthArmy. It is anticipated a minimum of 20,000 bbls. Avgas storage will be available on this island by F / 35. Re-supply shipments of Avgas will be made in bulk as prescribed for Phase I. Re-supply of Class III products other than Avgas will consist of three (3) fifteen (15) day shipments in drums. Subsequent maintenance shipments will consist of approximately 15 days maintenance supplies (less Avgas, Mogas and Diesel), until the prescribed levels are reached. Thereafter, only sufficient supplies will be included to maintain those levels. Re-supply of Mogas and Diesel after the third 15 day shipment will be in bulk; it is contemplated bulk storage for these products will be operative by F / 15.

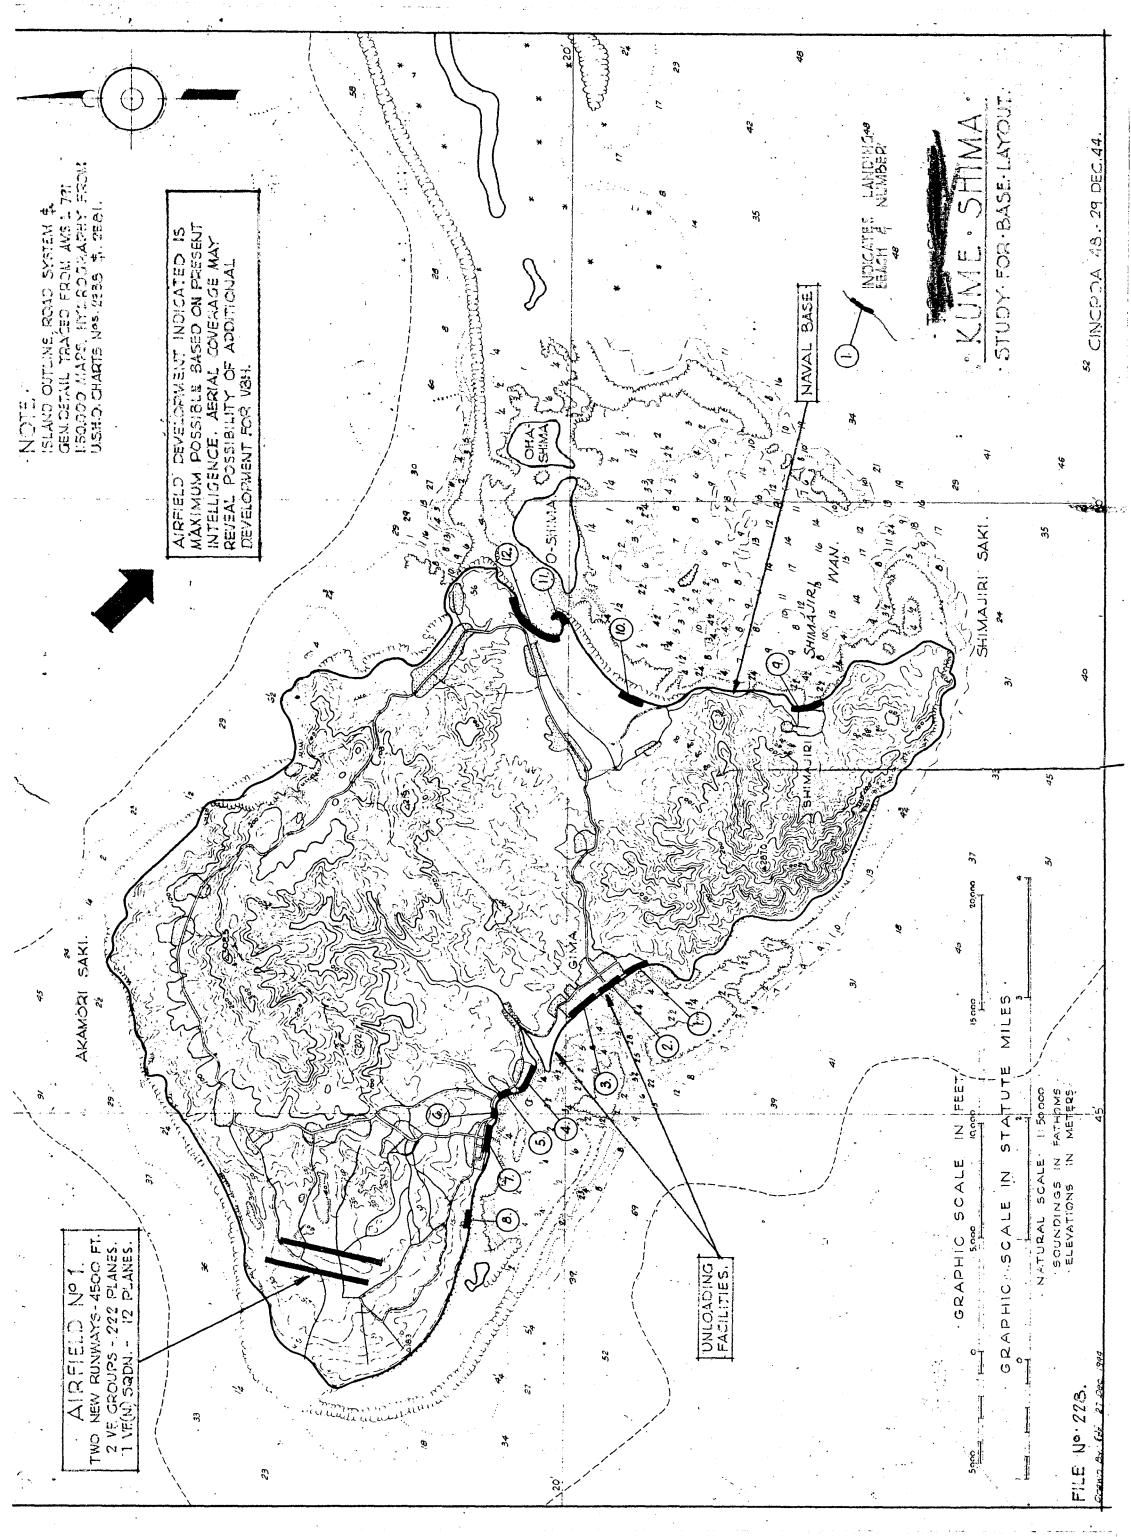

(5) Individual shipping designators will be assigned to KUME,
MIYAKO and KIKAI to facilitate these direct maintenance shipments.

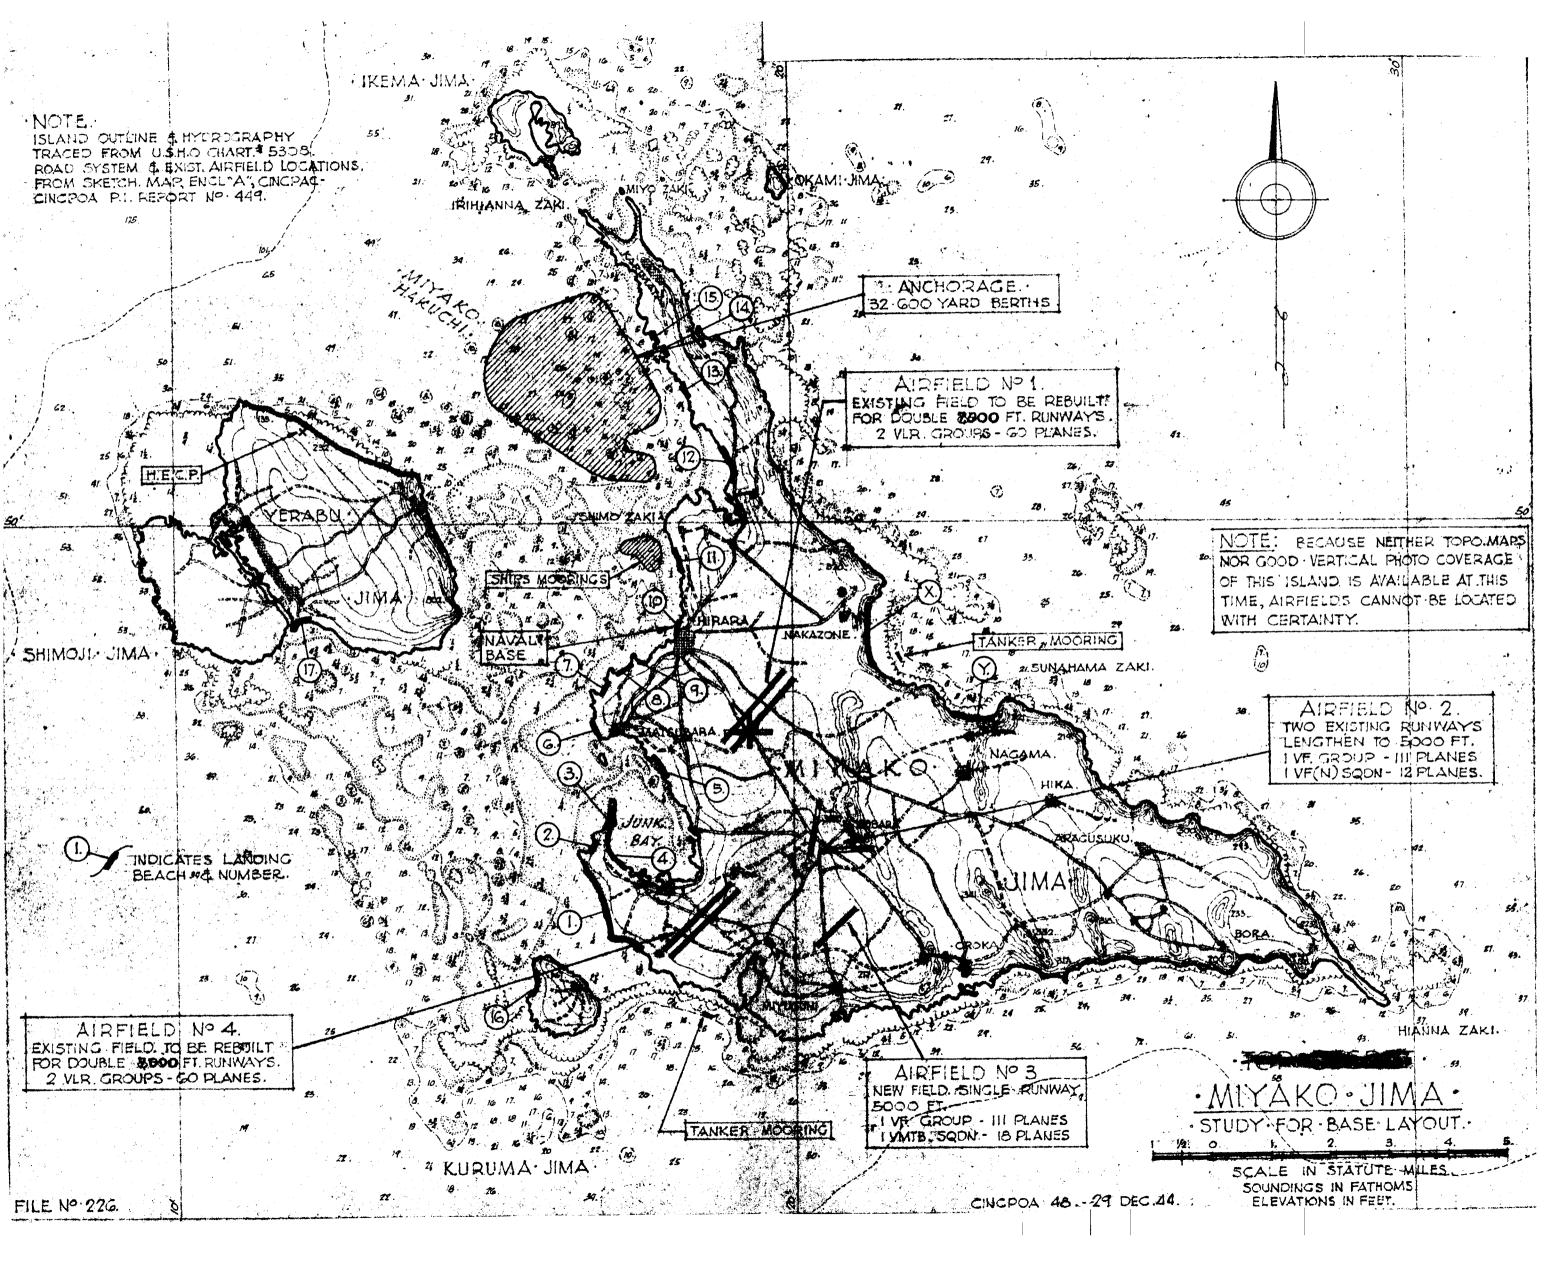

## 9. MILITARY GOVERNMENT

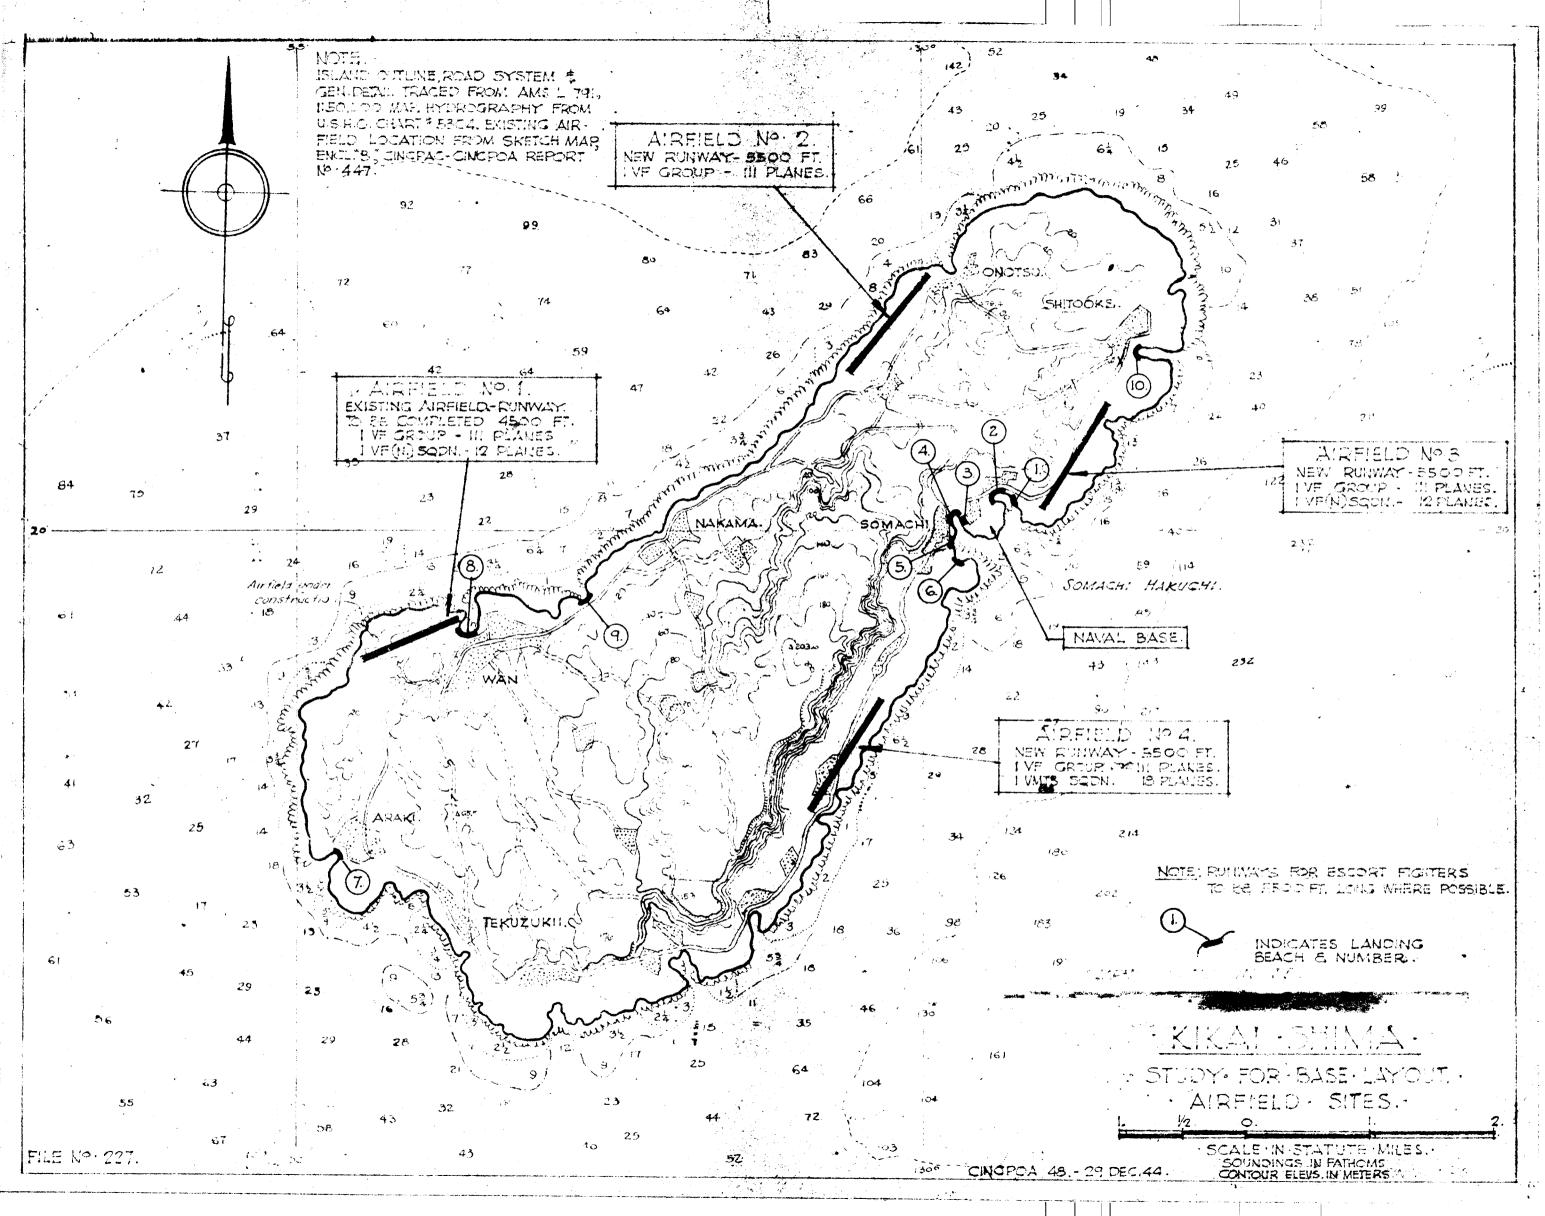

Civilian requirements will be provided in the manner set forth in the Logistic Measures for Phase I, utilizing additional Military Government Teams as shown in the Troop List, Phase III.
